

CONTENTS

Introduction	1
Acknowledgments	6
1. Statement of the results	7
1.1. Conformally invariant systems	7
1.2. The Heisenberg group Fourier transform	8
1.3. The Fourier transformed picture of the minimal representation	9
1.4. The Lie algebra action and lowest K -types	11
1.5. The minimal representation	12
1.6. The action of a non-trivial Weyl group element	13
1.7. Outlook	13
2. Structure theory for Heisenberg parabolic subgroups	15
2.1. Heisenberg parabolic subgroups	15
2.2. The \mathfrak{sl}_2 -triple and the Weyl group element w_0	16
2.3. Minimal (co)adjoint orbits	16
2.4. The symplectic invariants	17
2.5. The Killing form	20
2.6. The Heisenberg nilradical	21
2.7. Bruhat decomposition	21
2.8. Maximal compact subgroups	24
2.9. Hermitian vs. non-Hermitian	27
3. Principal series representations and intertwining operators	31
3.1. Degenerate principal series representations	31
3.2. The non-compact picture	31
3.3. Intertwining operators	33
3.4. The Fourier transform on the Heisenberg group	34
3.5. The Schrödinger model and the Fourier transform of distributions	35
4. Conformally invariant systems and their Fourier transform	41
4.1. Quantization of the symplectic invariants	41
4.2. Conformal invariance	42
4.3. The Fourier transform of Ω_ω	45

4.4. The Fourier transform of Ω_μ	46
4.5. The Fourier transform of Ω_Ψ and Ω_Q	46
5. Analysis of the Fourier transform of Ω_μ	49
5.1. The Lagrangian decomposition	49
5.2. The bigrading	50
5.3. Identities for the moment map μ in the bigrading	53
5.4. \mathfrak{m} -invariant distribution vectors in the metaplectic representation	55
5.5. The Fourier transformed picture	59
5.6. The case $\mathfrak{g} = \mathfrak{sl}(n, \mathbb{R})$	64
5.7. The case $\mathfrak{g} = \mathfrak{so}(p, q)$	67
5.8. Matching the Lie algebra action with the literature	76
6. Lowest K-types	79
6.1. Cartan involutions	79
6.2. The quaternionic cases $\mathfrak{g} = \mathfrak{e}_{6(2)}, \mathfrak{e}_{7(-5)}, \mathfrak{e}_{8(-24)}$	82
6.3. The split cases $\mathfrak{g} = \mathfrak{e}_{6(6)}, \mathfrak{e}_{7(7)}, \mathfrak{e}_{8(8)}$	89
6.4. The case $\mathfrak{g} = \mathfrak{g}_{2(2)}$	92
6.5. The case $\mathfrak{g} = \mathfrak{sl}(n, \mathbb{R})$	95
6.6. The case $\mathfrak{g} = \mathfrak{sl}(3, \mathbb{R})$	96
6.7. The case $\mathfrak{g} = \mathfrak{so}(p, q)$	97
6.8. The case $\mathfrak{g} = \mathfrak{so}(p, 3)$	104
7. L^2-models for minimal representations	107
7.1. Integration of the (\mathfrak{g}, K) -module	107
7.2. Action of Weyl group elements	109
A. The K-Bessel function	117
A.1. The differential equation and asymptotics	117
A.2. Identities	118
A.3. Half-integer parameters	118
B. Examples	119
B.1. $\mathfrak{g} = \mathfrak{sl}(n, \mathbb{R})$	119
B.2. $\mathfrak{g} = \mathfrak{so}(p, q)$	120
B.3. $\mathfrak{g} = \mathfrak{g}_{2(2)}$	122
C. A meromorphic family of distributions	125
C.1. Some preliminary formulas	125
C.2. A Bernstein-Sato identity	127
D. Tables	129
Index	131
Bibliography	133
