Foreword	xi
Permissions & Acknowledgments	xv
Lecture 1. Knots and Links, Reidemeister Moves	1
§1.1. Main definitions	1
§1.2. Reidemeister moves	4
§1.3. Torus knots	8
§1.4. Invertibility and chirality	8
§1.5. Exercises	9
Lecture 2. The Conway Polynomial	11
§2.1. Axiomatic definition	12
§2.2. Calculations	12
§2.3. Uniqueness and existence of the Conway polynomial	14
§2.4. Chirality, orientation-reversal, and multiplicativity of the Conway polynomial	19
§2.5. Exercises	19
Lecture 3. The Arithmetic of Knots	21
§3.1. Boxed knots and their connected sum	21
§3.2. The semigroup of boxed knots	22

§3.3. Ordinary knots vs. boxed knots	24
§3.4. Decomposition into prime knots	25
§3.5. Some remarks about unknotting	26
§3.6. Exercises	26
Lecture 4. Some Simple Knot Invariants	29
§4.1. Stick number	29
§4.2. Crossing number	30
§4.3. Unknotting number	31
§4.4. Tricolorability	32
§4.5. Digression about orientable surfaces	33
§4.6. Seifert surface of a knot	35
§4.7. The genus of a knot	36
§4.8. Exercises	36
Lecture 5. The Kauffman Bracket	39
§5.1. Digression: statistical models in physics	39
§5.2. The “state” of a (nonoriented) knot diagram	41
§5.3. Definition and properties of the Kauffman bracket	42
§5.4. Is the Kauffman bracket invariant?	43
§5.5. Exercises	46
Lecture 6. The Jones Polynomial	47
§6.1. Definition via the Kauffman bracket	47
§6.2. Main properties of $J(\cdot)$	49
§6.3. Axioms for the Jones polynomial	50
§6.4. Multiplicativity	51
§6.5. Chirality and reversibility	52
§6.6. Is the Jones polynomial a complete invariant?	52
§6.7. Is V a Laurent polynomial in q ?	53
§6.8. Knot tables revisited	54
§6.9. Exercises	55
Lecture 7. Braids	57

§7.1. Geometric braids	58
§7.2. The geometric braid group B_n	59
§7.3. Digression on group presentations	60
§7.4. Artin presentation of the braid group	62
§7.5. Digression on undecidable problems	63
§7.6. Closure of a braid	64
§7.7. Exercises	66
Lecture 8. Discriminants and Finite Type Invariants	69
§8.1. Discriminant of quadratic equations and real roots	69
§8.2. Degree of a point w.r.t. a curve	71
§8.3. Inertia index of a quadratic form	72
§8.4. Gauss linking number	74
§8.5. Exercises	76
Lecture 9. Vassiliev Invariants	77
§9.1. Basic definitions	78
§9.2. The one-term and four-term relations	80
§9.3. Dimensions of the spaces V_n	81
§9.4. Chord diagrams	81
§9.5. Vassiliev invariants of small order	83
§9.6. Exercises	84
Lecture 10. Combinatorial Description of Vassiliev Invariants	87
§10.1. Digression: graded algebras	87
§10.2. The graded algebra of chord diagrams	88
§10.3. The Vassiliev–Kontsevich theorem	91
§10.4. Vassiliev invariants vs. other invariants	92
§10.5. Exercises	92
Lecture 11. The Kontsevich Integrals	95
§11.1. The original Kontsevich integral of a trefoil knot	96
§11.2. Calculation of the integral for $m = 2$	97
§11.3. Kontsevich integral of the hump	99

§11.4. Results	100
§11.5. Exercises	101
Lecture 12. Other Important Topics	103
§12.1. Knot polynomials	103
§12.2. Virtual knots	105
§12.3. Knots in 3-manifolds	106
§12.4. Khovanov homology	107
§12.5. Knot energy	108
§12.6. Connections with other fields	108
Lecture 13. A Brief History of Knot Theory	111
§13.1. Carl Friedrich Gauss: pictures of knots and the linking number	112
§13.2. William Thompson, P.G. Tait, J.C. Maxwell, and knots as models of atoms	113
§13.3. Henri Poincaré: surgery along the trefoil and the fundamental group	114
§13.4. Max Dehn, Kurt Reidemeister, the German school, and the beginnings of knot theory	115
§13.5. James Alexander, John Conway, their polynomial, and the skein relation	116
§13.6. Vaughan Jones, Louis Kauffman, and the discoverers of the HOMFLY polynomial	117
§13.7. Edward Witten, Michael Atiyah, and quantum field theory	119
§13.8. Oleg Viro, Nikolay Reshetikhin, Vladimir Turaev, and a rigorous theory of links in manifolds	120
§13.9. Wolfgang Haken, Friedhelm Waldhausen, Sergei Matveev, and the classification of knots	120
§13.10. Victor Vassiliev and Mikhail Goussarov, and finite type invariants	121
§13.11. Maxim Kontsevich, Dror Bar-Natan, Joan Birman, and the combinatorial theory of finite type invariants	122
§13.12. Concluding remarks	123
