

STUDENT MATHEMATICAL LIBRARY
Volume 4

Problems in Mathematical Analysis I

Real Numbers,
Sequences and Series

W. J. Kaczor
M. T. Nowak

Contents

Preface	xi
Notation and Terminology	xiii
Problems	
Chapter 1. Real Numbers	
1.1. Supremum and Infimum of Sets of Real Numbers. Continued Fractions	3
1.2. Some Elementary Inequalities	8
Chapter 2. Sequences of Real Numbers	
2.1. Monotonic Sequences	19
2.2. Limits. Properties of Convergent Sequences	26
2.3. The Toeplitz Transformation, the Stolz Theorem and their Applications	35
2.4. Limit Points. Limit Superior and Limit Inferior	40
2.5. Miscellaneous Problems	47
Chapter 3. Series of Real Numbers	
3.1. Summation of Series	63

3.2. Series of Nonnegative Terms	72
3.3. The Integral Test	88
3.4. Series of Positive and Negative Terms - Convergence, Absolute Convergence. Theorem of Leibniz	92
3.5. The Dirichlet and Abel Tests	99
3.6. Cauchy Product of Infinite Series	102
3.7. Rearrangement of Series. Double Series	105
3.8. Infinite Products	112
 Solutions	
Chapter 1. Real Numbers	
1.1. Supremum and Infimum of Sets of Real Numbers. Continued Fractions	125
1.2. Some Elementary Inequalities	136
Chapter 2. Sequences of Real Numbers	
2.1. Monotonic Sequences	151
2.2. Limits. Properties of Convergent Sequences	162
2.3. The Toeplitz Transformation, the Stolz Theorem and their Applications	181
2.4. Limit Points. Limit Superior and Limit Inferior	189
2.5. Miscellaneous Problems	208
Chapter 3. Series of Real Numbers	
3.1. Summation of Series	245
3.2. Series of Nonnegative Terms	269
3.3. The Integral Test	302
3.4. Series of Positive and Negative Terms - Convergence, Absolute Convergence. Theorem of Leibniz	309
3.5. The Dirichlet and Abel Tests	324
3.6. Cauchy Product of Infinite Series	333

Contents ix

3.7. Rearrangement of Series. Double Series	342
3.8. Infinite Products	360
Bibliography - Books	379

Preface

This book is an enlarged and revised English edition of a Polish version published in 1996 by the Publishing House of Maria Curie-Skłodowska University in Lublin, Poland. It is the first volume of a planned series of books of problems in mathematical analysis. The second volume, already published in Polish, is under translation into English. The series is mainly intended for students who take courses in basic principles of analysis. The choice and arrangement of the material make it suitable for self-study, and instructors may find it useful as an aid in organizing tutorials and seminars.

This volume covers three topics: real numbers, sequences, and series. It does not contain problems concerning metric and topological spaces, which we intend to present in subsequent volumes.

The book is divided into two parts. The first part is a collection of exercises and problems, and the second contains their solutions. Complete solutions are given in most cases. Where no difficulties could be expected or when an analogous problem has already been solved, only a hint or simply an answer is given. Very often various solutions of a given problem are possible; we present here only one, hoping students themselves will find others.

With the student in mind, we have tried to keep things at an elementary level whenever possible. For example, we present an elementary proof of the Toeplitz theorem about the so-called regular transformation of sequences, which in many texts is proved by methods of functional analysis. The proof presented is taken from Toeplitz's original paper, published in 1911 in *Prace Matematyczno-Fizyczne*, Vol. 22. We hope that our presentation of this part of real analysis will be more accessible to readers and will ensure wider understanding.

All the notations and definitions used in this volume are standard and commonly used. The reader can find them, for example, in the textbooks [12] and [23], in which all necessary theoretical background can be found. However, to make the book consistent and to avoid ambiguity, a list of notations and definitions is included.

We have borrowed freely from many textbooks, problem books and problem sections of journals like the *American Mathematical Monthly*, *Mathematics Today* (Russian) and *Delta* (Polish). A complete list is given in the bibliography. It was beyond the authors' scope to trace all original sources, and we may have overlooked some contributions. If this has happened, we offer our sincere apologies.

We are deeply indebted to all our friends and colleagues from the Department of Mathematics of Maria Curie-Skłodowska University who offered stimulating suggestions. We have had many fruitful conversations with M. Koter-Mórgowska, T. Kuczumow, W. Rzymowski, S. Stachura and W. Zygmunt. Our sincere thanks are also due to Professor Jan Krzyż for his help in preparing the first version of the English manuscript. We are pleased to express our gratitude to Professor Kazimierz Goebel for his encouragement and active interest in the project. It is our pleasure to thank Professor Richard J. Libera, University of Delaware, for his invaluable and most generous help with the English translation and for all his suggestions and corrections which greatly improved the final version of the book.

W. J. Kaczor, M. T. Nowak
