Foreword	ix
Acknowledgements	xi
Introduction	1
§1. A sketch of our problem	1
§2. Some notation	3
Exercises	5
Chapter 1. The $\sqrt{n}$ theory	7
§1. Erdős' original argument	7
§2. Higher dimensions	9
§3. Arbitrary metrics	11
Exercises	13
Chapter 2. The $n^{2/3}$ theory	15
§1. The Erdős integer distance principle	15
§2. Moser's construction	16
Exercises	20
Chapter 3. The Cauchy-Schwarz inequality	23
§1. Proof of the Cauchy-Schwarz inequality	23

---

§2. Application: Projections	25
Chapter 4. Graph theory and incidences	29
§1. Basic graph theory	29
§2. Crossing numbers	33
§3. Incidence matrices and Cauchy-Schwarz	36
§4. The Szemerédi-Trotter incidence theorem	38
Exercises	42
Chapter 5. The $n^{4/5}$ theory	45
§1. The Euclidean case: Straight line bisectors	45
§2. Convexity and potatoes	51
§3. Székely's method for potato metrics	56
Exercises	61
Chapter 6. The $n^{6/7}$ theory	65
§1. The setup	65
§2. Arithmetic enters the picture	67
Exercises	69
Chapter 7. Beyond $n^{6/7}$	71
§1. Sums and entries	71
§2. Tardos' elementary argument	72
§3. Katz-Tardos method	74
§4. Ruzsa's construction	77
Chapter 8. Information theory	81
§1. What is this information of which you speak?	81
§2. More information never hurts	83
§3. Application to the sums and entries problem	88
Chapter 9. Dot products	91
§1. Transferring ideas	91
§2. Székely's method	93
§3. Special cases	95

---

Exercises	99
Chapter 10. Vector spaces over finite fields	101
§1. Finite fields	101
§2. Vector spaces	103
§3. Exponential sums in finite fields	109
§4. The Fourier transform	115
Chapter 11. Distances in vector spaces over finite fields	119
§1. The setup	119
§2. The argument	121
Chapter 12. Applications of the Erdős distance problem	127
Appendix A. Hyperbolas in the plane	131
Appendix B. Basic probability theory	135
Appendix C. Jensen's inequality	139
Bibliography	143
Biographical information	147
