
Contents

Chapter 1. Introduction	1
§1.1. Approach	1
§1.2. Some History	4
§1.3. Notes on Use of the Text	6
§1.4. Acknowledgements and References	7
Chapter 2. Background	9
§2.1. First-Order Logic	9
§2.2. Sets	15
§2.3. Relations	21
§2.4. Bijection and Isomorphism	29
§2.5. Recursion and Induction	30
§2.6. Some Notes on Proofs and Abstraction	37
Chapter 3. Defining Computability	41
§3.1. Functions, Sets, and Sequences	41
§3.2. Turing Machines	43
§3.3. Partial Recursive Functions	50
§3.4. Coding and Countability	56
§3.5. A Universal Turing Machine	62

§3.6.	The Church-Turing Thesis	65
§3.7.	Other Definitions of Computability	66
Chapter 4.	Working with Computable Functions	77
§4.1.	The Halting Problem	77
§4.2.	The “Three Contradictions”	78
§4.3.	Parametrization	79
§4.4.	The Recursion Theorem	81
§4.5.	Unsolvability	85
Chapter 5.	Computing and Enumerating Sets	95
§5.1.	Dovetailing	95
§5.2.	Computing and Enumerating	96
§5.3.	Aside: Enumeration and Incompleteness	102
§5.4.	Enumerating Noncomputable Sets	105
Chapter 6.	Turing Reduction and Post’s Problem	109
§6.1.	Reducibility of Sets	109
§6.2.	Finite Injury Priority Arguments	115
§6.3.	Notes on Approximation	124
Chapter 7.	Two Hierarchies of Sets	127
§7.1.	Turing Degrees and Relativization	127
§7.2.	The Arithmetical Hierarchy	131
§7.3.	Index Sets and Arithmetical Completeness	135
Chapter 8.	Further Tools and Results	139
§8.1.	The Limit Lemma	139
§8.2.	The Arslanov Completeness Criterion	142
§8.3.	\mathcal{E} Modulo Finite Difference	145
Chapter 9.	Areas of Research	149
§9.1.	Computably Enumerable Sets and Degrees	149
§9.2.	Randomness	155
§9.3.	Some Model Theory	169

Contents

vii

§9.4. Computable Model Theory	174
§9.5. Reverse Mathematics	177
Appendix A. Mathematical Asides	189
§A.1. The Greek Alphabet	189
§A.2. Summations	190
§A.3. Cantor's Cardinality Proofs	190
Bibliography	193
Index	199
