List of figures	xi
List of tables	xiii
IAS/Park City Mathematics Institute	xv
Preface	xvii
Suggestions for instructors	xx
Acknowledgements	xxii
Chapter 1. Fourier series: Some motivation	1
§1.1. An example: Amanda calls her mother	2
§1.2. The main questions	7
§1.3. Fourier series and Fourier coefficients	10
§1.4. History, and motivation from the physical world	15
§1.5. Project: Other physical models	19
Chapter 2. Interlude: Analysis concepts	21
§2.1. Nested classes of functions on bounded intervals	22
§2.2. Modes of convergence	38
§2.3. Interchanging limit operations	45
§2.4. Density	49
§2.5. Project: Monsters, Take I	52

Chapter 3.	Pointwise convergence of Fourier series	55
§3.1.	Pointwise convergence: Why do we care?	55
§3.2.	Smoothness vs. convergence	59
§3.3.	A suite of convergence theorems	68
§3.4.	Project: The Gibbs phenomenon	73
§3.5.	Project: Monsters, Take II	74
Chapter 4.	Summability methods	77
§4.1.	Partial Fourier sums and the Dirichlet kernel	78
§4.2.	Convolution	82
§4.3.	Good kernels, or approximations of the identity	90
§4.4.	Fejér kernels and Cesàro means	96
§4.5.	Poisson kernels and Abel means	99
§4.6.	Excursion into $L^p(\mathbb{T})$	101
§4.7.	Project: Weyl's Equidistribution Theorem	102
§4.8.	Project: Averaging and summability methods	104
Chapter 5.	Mean-square convergence of Fourier series	107
§5.1.	Basic Fourier theorems in $L^2(\mathbb{T})$	108
§5.2.	Geometry of the Hilbert space $L^2(\mathbb{T})$	110
§5.3.	Completeness of the trigonometric system	115
§5.4.	Equivalent conditions for completeness	122
§5.5.	Project: The isoperimetric problem	126
Chapter 6.	A tour of discrete Fourier and Haar analysis	127
§6.1.	Fourier series vs. discrete Fourier basis	128
§6.2.	Short digression on dual bases in \mathbb{C}^N	134
§6.3.	The Discrete Fourier Transform and its inverse	137
§6.4.	The Fast Fourier Transform (FFT)	138
§6.5.	The discrete Haar basis	146
§6.6.	The Discrete Haar Transform	151
§6.7.	The Fast Haar Transform	152

§6.8.	Project: Two discrete Hilbert transforms	157
§6.9.	Project: Fourier analysis on finite groups	159
Chapter 7.	The Fourier transform in paradise	161
§7.1.	From Fourier series to Fourier integrals	162
§7.2.	The Schwartz class	164
§7.3.	The time–frequency dictionary for $\mathcal{S}(\mathbb{R})$	167
§7.4.	The Schwartz class and the Fourier transform	172
§7.5.	Convolution and approximations of the identity	175
§7.6.	The Fourier Inversion Formula and Plancherel	179
§7.7.	L^p norms on $\mathcal{S}(\mathbb{R})$	184
§7.8.	Project: A bowl of kernels	187
Chapter 8.	Beyond paradise	189
§8.1.	Continuous functions of moderate decrease	190
§8.2.	Tempered distributions	193
§8.3.	The time–frequency dictionary for $\mathcal{S}'(\mathbb{R})$	197
§8.4.	The delta distribution	202
§8.5.	Three applications of the Fourier transform	205
§8.6.	$L^p(\mathbb{R})$ as distributions	213
§8.7.	Project: Principal value distribution $1/x$	217
§8.8.	Project: Uncertainty and primes	218
Chapter 9.	From Fourier to wavelets, emphasizing Haar	221
§9.1.	Strang’s symphony analogy	222
§9.2.	The windowed Fourier and Gabor bases	224
§9.3.	The wavelet transform	230
§9.4.	Haar analysis	236
§9.5.	Haar vs. Fourier	250
§9.6.	Project: Local cosine and sine bases	257
§9.7.	Project: Devil’s advocate	257
§9.8.	Project: Khinchine’s Inequality	258

Chapter 10. Zooming properties of wavelets	261
§10.1. Multiresolution analyses (MRAs)	262
§10.2. Two applications of wavelets, one case study	271
§10.3. From MRA to wavelets: Mallat's Theorem	278
§10.4. How to find suitable MRAs	288
§10.5. Projects: Twin dragon; infinite mask	298
§10.6. Project: Linear and nonlinear approximations	299
Chapter 11. Calculating with wavelets	303
§11.1. The Haar multiresolution analysis	303
§11.2. The cascade algorithm	308
§11.3. Filter banks, Fast Wavelet Transform	314
§11.4. A wavelet library	323
§11.5. Project: Wavelets in action	328
Chapter 12. The Hilbert transform	329
§12.1. In the frequency domain: A Fourier multiplier	330
§12.2. In the time domain: A singular integral	333
§12.3. In the Haar domain: An average of Haar shifts	336
§12.4. Boundedness on L^p of the Hilbert transform	341
§12.5. Weak boundedness on $L^1(\mathbb{R})$	346
§12.6. Interpolation and a festival of inequalities	352
§12.7. Some history to conclude our journey	358
§12.8. Project: Edge detection and spectroscopy	365
§12.9. Projects: Harmonic analysis for researchers	366
Appendix. Useful tools	371
§A.1. Vector spaces, norms, inner products	371
§A.2. Banach spaces and Hilbert spaces	377
§A.3. $L^p(\mathbb{R})$, density, interchanging limits on \mathbb{R}	382
Bibliography	391
Name index	401
Subject index	403
