Foreword: MASS and REU at Penn State University	ix
Preface	xi
Chapter 1. Prelude: Love, Hate, and Exponentials	1
§1.1. Two sets of travelers	1
§1.2. Winding around	5
§1.3. The most important function in mathematics	6
§1.4. Exercises	12
Chapter 2. Paths and Homotopies	15
§2.1. Path connectedness	15
§2.2. Homotopy	18
§2.3. Homotopies and simple-connectivity	22
§2.4. Exercises	25
Chapter 3. The Winding Number	27
§3.1. Maps to the punctured plane	27
§3.2. The winding number	29
§3.3. Computing winding numbers	33
§3.4. Smooth paths and loops	38

§3.5. Counting roots via winding numbers	42
§3.6. Exercises	46
Chapter 4. Topology of the Plane	49
§4.1. Some classic theorems	49
§4.2. The Jordan curve theorem I	54
§4.3. The Jordan curve theorem II	59
§4.4. Inside the Jordan curve	63
§4.5. Exercises	67
Chapter 5. Integrals and the Winding Number	73
§5.1. Differential forms and integration	73
§5.2. Closed and exact forms	79
§5.3. The winding number via integration	84
§5.4. Homology	87
§5.5. Cauchy's theorem	94
§5.6. A glimpse at higher dimensions	95
§5.7. Exercises	97
Chapter 6. Vector Fields and the Rotation Number	101
§6.1. The rotation number	101
§6.2. Curvature and the rotation number	105
§6.3. Vector fields and singularities	107
§6.4. Vector fields and surfaces	113
§6.5. Exercises	117
Chapter 7. The Winding Number in Functional Analysis	121
§7.1. The Fredholm index	121
§7.2. Atkinson's theorem	125
§7.3. Toeplitz operators	129
§7.4. The Toeplitz index theorem	133
§7.5. Exercises	136

Chapter 8. Coverings and the Fundamental Group	139
§8.1. The fundamental group	139
§8.2. Covering and lifting	143
§8.3. Group actions	150
§8.4. Examples	153
§8.5. The Nielsen-Schreier theorem	157
§8.6. An application to nonassociative algebra	161
§8.7. Exercises	165
Chapter 9. Coda: The Bott Periodicity Theorem	169
§9.1. Homotopy groups	169
§9.2. The topology of the general linear group	174
Appendix A. Linear Algebra	181
§A.1. Vector spaces	181
§A.2. Basis and dimension	184
§A.3. Linear transformations	188
§A.4. Duality	192
§A.5. Norms and inner products	194
§A.6. Matrices and determinants	197
Appendix B. Metric Spaces	203
§B.1. Metric spaces	203
§B.2. Continuous functions	206
§B.3. Compact spaces	208
§B.4. Function spaces	213
Appendix C. Extension and Approximation Theorems	217
§C.1. The Stone-Weierstrass theorem	217
§C.2. The Tietze extension theorem	220
Appendix D. Measure Zero	223
§D.1. Measure zero subsets of \mathbb{R} and of S^1	223

Appendix E. Calculus on Normed Spaces	229
§E.1. Normed vector spaces	229
§E.2. The derivative	231
§E.3. Properties of the derivative	233
§E.4. The inverse function theorem	237
Appendix F. Hilbert Space	239
§F.1. Definition and examples	239
§F.2. Orthogonality	243
§F.3. Operators	246
Appendix G. Groups and Graphs	249
§G.1. Equivalence relations	250
§G.2. Groups	251
§G.3. Homomorphisms	254
§G.4. Graphs	257
Bibliography	261
Index	265
