
Index

- L*-system, 95
- k*-partite, 98
- k*-uniform, 1
- $m(n, k, L)$, 95
- r*-cross *t*-intersecting, 74
- r*-cross union, 28
- r*-wise intersecting union, 80
- r*-wise union, 29
- s*-independent family, 142
- t*-avoiding, 138
- t*-intersecting, 9, 53

- alternating tensor, 164
- antichain, 1

- bilinear map, 162
- bipartite pseudo-adjacency matrix (bpam), 182
- biregular bipartite graph, 186

- capset, 202
- cascade representation, 33
- center, 109
- chain, 1
- characteristic vector, 127
- closed *L*-system, 97
- colex ordering, 31
- column space, 142
- complement family, viii, 6
- cover, 115
- cross *t*-intersecting, 187

- cross intersecting families, 74, 83
- cross union families, 28, 83

- degree, viii
- Deza–Erdős–Frankl Theorem, 109
- Deza–Frankl–Singhi Theorem, 130
- diameter, 7
- downset, 7, 77
- dual form, 190

- Erdős *t*-antichain theorem, 27
- Erdős matching conjecture, 47
- Erdős–Ko–Rado Theorem, 19
- eventown rules, 155
- exchange operation, 56
- exponent of a family, 95
- exterior algebra, 167

- Füredi’s structure theorem, 98, 115
- feasible, 190
- Fisher’s inequality, 137
- Frankl–Wilson, 129, 142
- Full Erdős–Ko–Rado Theorem, 89

- Gottlieb’s theorem, 144

- hereditary family, 7
- Hilton–Milner Theorem, 43
- homogeneous family, 117

- immediate shadow, 2, 32
- inclusion matrix, 141

- independence number, 175
- independent set in a graph, 175
- intersecting family, 9
- intersecting-union family, 79
- intersection closure, 116
- intersection structure (IS), 97
- isomorphic families, viii

- Katona union theorem, 20
- Katona's intersecting shadow theorem, 145
- Kleitman diameter theorem, 22
- Kleitman's correlation inequality, 77
- Kneser graph, 59, 178
- Kruskal–Katona Theorem, 10, 32
- Kruskal–Katona Theorem (Lovász version), 214
- Kruskal–Katona Theorem (Lovász version), 12, 84

- linear programming (LP), 189

- matching, 121
- matching number, 47
- multilinear map, 163
- multilinear polynomial, 130

- oddtown rules, 156

- positive semidefinite (PSD), 175
- primal form, 189
- probability measure, 69, 181
- product measure, 70, 77, 89
- pseudo-adjacency matrix (pam), 176
- pushing-pulling method, 61

- Rödl's packing theorem, 121, 122
- Rödl–Tengan construction, 123
- rank of an L -system, 97
- ratio bound, 177
- Ray-Chaudhuri–Wilson Theorem, 127
- regular, viii, 122

- semidefinite programming (SDP), 189
- shadow, 9
- shift-end, 88

- shifting operation, 8
- shifts to, 88
- singular decomposition, 182
- slice rank, 203
- sliced function, 202
- Snevily's Theorem, 132
- Sperner's Theorem, 2, 26
- squash operation, 6
- Steiner system, 96, 123, 132, 150
- sunflower, 109, 202
- symmetric algebra, 167
- symmetric tensor, 164

- Takagi function, 36
- tensor product, 163
- trace, 7, 13

- uniform family, 1
- uniform measure, 70
- union family, 9
- unit-distance graph, 139
- upset, 38, 77

- walk, 87
- weak duality for LP, 190
- weak duality for SDP, 191

- Yamamoto's inequality, 25
