# Contents

Notation	vii
Chapter 1. Introduction	1
Chapter 2. Operations on sets and set systems	5
Chapter 3. Theorems on traces	13
Chapter 4. The Erdős–Ko–Rado Theorem via shifting	19
Chapter 5. Katona’s circle	23
Chapter 6. The Kruskal–Katona Theorem	31
Chapter 7. Kleitman Theorem for no $s$ pairwise disjoint sets	37
Chapter 8. The Hilton–Milner Theorem	43
Chapter 9. The Erdős matching conjecture	47
Chapter 10. The Ahlswede–Khachatrian Theorem	53
Chapter 11. Pushing-pulling method	61
Chapter 12. Uniform measure versus product measure	69
Chapter 13. Kleitman’s correlation inequality	77

---

Chapter 14.	$r$ -Cross union families	83
Chapter 15.	Random walk method	87
Chapter 16.	$L$ -systems	95
Chapter 17.	Exponent of a $(10, \{0, 1, 3, 6\})$ -system	103
Chapter 18.	The Deza–Erdős–Frankl Theorem	109
Chapter 19.	Füredi’s structure theorem	115
Chapter 20.	Rödl’s packing theorem	121
Chapter 21.	Upper bounds using multilinear polynomials	127
Chapter 22.	Application to discrete geometry	137
Chapter 23.	Upper bounds using inclusion matrices	141
Chapter 24.	Some algebraic constructions for $L$ -systems	149
Chapter 25.	Oddtown and eventown problems	155
Chapter 26.	Tensor product method	161
Chapter 27.	The ratio bound	175
Chapter 28.	Measures of cross independent sets	181
Chapter 29.	Application of semidefinite programming	189
Chapter 30.	A cross intersection problem with measures	195
Chapter 31.	Capsets and sunflowers	201
Chapter 32.	Challenging open problems	211
	Bibliography	217
	Index	223
