Preface	ix
Overview	1
Chapter 1. Preliminaries	11
1.1. Basic notation	11
1.2. Lebesgue spaces	11
1.3. Borel measures	14
1.4. Some elementary functional analysis	17
1.5. Some operator theory	20
1.6. Functional analysis on the space of measures	22
1.7. Non-tangential limits and angular derivatives	25
1.8. Poisson and conjugate Poisson integrals	30
1.9. The classical Hardy spaces	32
1.10. Weak-type spaces	35
1.11. Interpolation and Carleson's theorem	36
1.12. Some integral estimates	39
Chapter 2. The Cauchy transform as a function	41
2.1. General properties of Cauchy integrals	41
2.2. Cauchy integrals and $H^1$	46
2.3. Cauchy $A$ -integrals	48
2.4. Fatou's jump theorem	54
2.5. Plemelj's formula	56
2.6. Tangential boundary behavior	58
2.7. Cauchy-Stieltjes integrals	59
Chapter 3. The Cauchy transform as an operator	61
3.1. An early theorem of Privalov	62
3.2. Riesz's theorem	64
3.3. Bounded and vanishing mean oscillation	69
3.4. Kolmogorov's theorem	73
3.5. Weighted spaces	76
3.6. The Cauchy transform and duality	77
3.7. Best constants	79
3.8. The Hilbert transform	81
Chapter 4. Topologies on the space of Cauchy transforms	83
4.1. The norm topology	83
4.2. The weak-* topology	91
4.3. The weak topology	94

4.4. Schauder bases	95
Chapter 5. Which functions are Cauchy integrals?	99
5.1. General remarks	99
5.2. A theorem of Havin	99
5.3. A theorem of Tumarkin	100
5.4. Aleksandrov's characterization	102
5.5. Other representation theorems	109
5.6. Some geometric conditions	110
Chapter 6. Multipliers and divisors	115
6.1. Multipliers and Toeplitz operators	115
6.2. Some necessary conditions	118
6.3. A theorem of Goluzina	120
6.4. Some sufficient conditions	122
6.5. The $\mathcal{F}$ -property	127
6.6. Multipliers and inner functions	129
Chapter 7. The distribution function for Cauchy transforms	163
7.1. The Hilbert transform of a measure	163
7.2. Boole's theorem and its generalizations	164
7.3. A refinement of Boole's theorem	169
7.4. Measures on the circle	170
7.5. A theorem of Stein and Weiss	176
Chapter 8. The backward shift on $H^2$	179
8.1. Beurling's theorem	179
8.2. A theorem of Douglas, Shapiro, and Shields	180
8.3. Spectral properties	184
8.4. Kernel functions	185
8.5. A density theorem	186
8.6. A theorem of Ahern and Clark	192
8.7. A basis for backward shift invariant subspaces	192
8.8. The compression of the shift	194
8.9. Rank-one unitary perturbations	196
Chapter 9. Clark measures	201
9.1. Some basic facts about Clark measures	201
9.2. Angular derivatives and point masses	208
9.3. Aleksandrov's disintegration theorem	211
9.4. Extensions of the disintegration theorem	212
9.5. Clark's theorem on perturbations	218
9.6. Some remarks on pure point spectra	221
9.7. Poltoratski's distribution theorem	222
Chapter 10. The normalized Cauchy transform	227
10.1. Basic definition	227
10.2. Mapping properties of the normalized Cauchy transform	227
10.3. Function properties of the normalized Cauchy transform	230
10.4. A few remarks about the Borel transform	241

10.5. A closer look at the $\mathcal{F}$ -property	243
Chapter 11. Other operators on the Cauchy transforms	249
11.1. Some classical operators	249
11.2. The forward shift	250
11.3. The backward shift	252
11.4. Toeplitz operators	252
11.5. Composition operators	253
11.6. The Cesàro operator	253
List of Symbols	255
Bibliography	257
Index	267
