Preface	ix
Symbols and notation	xi
Chapter 1. Simple examples	1
1.1. Billiard in a circle	1
1.2. Billiard in a square	5
1.3. A simple mechanical model	9
1.4. Billiard in an ellipse	11
1.5. A chaotic billiard: pinball machine	15
Chapter 2. Basic constructions	19
2.1. Billiard tables	19
2.2. Unbounded billiard tables	22
2.3. Billiard flow	23
2.4. Accumulation of collision times	24
2.5. Phase space for the flow	26
2.6. Coordinate representation of the flow	27
2.7. Smoothness of the flow	29
2.8. Continuous extension of the flow	30
2.9. Collision map	31
2.10. Coordinates for the map and its singularities	32
2.11. Derivative of the map	33
2.12. Invariant measure of the map	35
2.13. Mean free path	37
2.14. Involution	38
Chapter 3. Lyapunov exponents and hyperbolicity	41
3.1. Lyapunov exponents: general facts	41
3.2. Lyapunov exponents for the map	43
3.3. Lyapunov exponents for the flow	45
3.4. Hyperbolicity as the origin of chaos	48
3.5. Hyperbolicity and numerical experiments	50
3.6. Jacobi coordinates	51
3.7. Tangent lines and wave fronts	52
3.8. Billiard-related continued fractions	55
3.9. Jacobian for tangent lines	57
3.10. Tangent lines in the collision space	58
3.11. Stable and unstable lines	59
3.12. Entropy	60

3.13. Proving hyperbolicity: cone techniques	62
Chapter 4. Dispersing billiards	67
4.1. Classification and examples	67
4.2. Another mechanical model	69
4.3. Dispersing wave fronts	71
4.4. Hyperbolicity	73
4.5. Stable and unstable curves	75
4.6. Proof of Proposition 4.29	77
4.7. More continued fractions	83
4.8. Singularities (local analysis)	86
4.9. Singularities (global analysis)	88
4.10. Singularities for type B billiard tables	91
4.11. Stable and unstable manifolds	93
4.12. Size of unstable manifolds	95
4.13. Additional facts about unstable manifolds	97
4.14. Extension to type B billiard tables	99
Chapter 5. Dynamics of unstable manifolds	103
5.1. Measurable partition into unstable manifolds	103
5.2. u-SRB densities	104
5.3. Distortion control and homogeneity strips	107
5.4. Homogeneous unstable manifolds	109
5.5. Size of H-manifolds	111
5.6. Distortion bounds	113
5.7. Holonomy map	118
5.8. Absolute continuity	120
5.9. Two growth lemmas	124
5.10. Proofs of two growth lemmas	127
5.11. Third growth lemma	132
5.12. Size of H-manifolds (a local estimate)	136
5.13. Fundamental theorem	137
Chapter 6. Ergodic properties	141
6.1. History	141
6.2. Hopf's method: heuristics	141
6.3. Hopf's method: preliminaries	143
6.4. Hopf's method: main construction	144
6.5. Local ergodicity	147
6.6. Global ergodicity	151
6.7. Mixing properties	152
6.8. Ergodicity and invariant manifolds for billiard flows	154
6.9. Mixing properties of the flow and 4-loops	156
6.10. Using 4-loops to prove K-mixing	158
6.11. Mixing properties for dispersing billiard flows	160
Chapter 7. Statistical properties	163
7.1. Introduction	163
7.2. Definitions	163
7.3. Historic overview	167

7.4. Standard pairs and families	169
7.5. Coupling lemma	172
7.6. Equidistribution property	175
7.7. Exponential decay of correlations	176
7.8. Central Limit Theorem	179
7.9. Other limit theorems	184
7.10. Statistics of collisions and diffusion	186
7.11. Solid rectangles and Cantor rectangles	190
7.12. A ‘magnet’ rectangle	193
7.13. Gaps, recovery, and stopping	197
7.14. Construction of coupling map	200
7.15. Exponential tail bound	205
Chapter 8. Bunimovich billiards	207
8.1. Introduction	207
8.2. Defocusing mechanism	207
8.3. Bunimovich tables	209
8.4. Hyperbolicity	210
8.5. Unstable wave fronts and continued fractions	214
8.6. Some more continued fractions	216
8.7. Reduction of nonessential collisions	220
8.8. Stadia	223
8.9. Uniform hyperbolicity	227
8.10. Stable and unstable curves	230
8.11. Construction of stable and unstable manifolds	232
8.12. u -SRB densities and distortion bounds	235
8.13. Absolute continuity	238
8.14. Growth lemmas	242
8.15. Ergodicity and statistical properties	248
Chapter 9. General focusing chaotic billiards	251
9.1. Hyperbolicity via cone techniques	252
9.2. Hyperbolicity via quadratic forms	254
9.3. Quadratic forms in billiards	255
9.4. Construction of hyperbolic billiards	257
9.5. Absolutely focusing arcs	260
9.6. Cone fields for absolutely focusing arcs	263
9.7. Continued fractions	265
9.8. Singularities	266
9.9. Application of Pesin and Katok-Strelcyn theory	270
9.10. Invariant manifolds and absolute continuity	272
9.11. Ergodicity via ‘regular coverings’	274
Afterword	279
Appendix A. Measure theory	281
Appendix B. Probability theory	291
Appendix C. Ergodic theory	299
