Preface	ix
Notation	xi
Introduction	1
Chapter 1. Introduction	3
1.1. Basic methodology	4
1.2. The basic setting for Markov processes	6
1.3. Related approaches	8
1.4. Examples	10
1.5. An outline of the major obstacles	25
Chapter 2. An overview	29
2.1. Basic setup	30
2.2. Compact state spaces	30
2.3. General state spaces	33
Part 1. The general theory of large deviations	39
Chapter 3. Large deviations and exponential tightness	41
3.1. Basic definitions and results	41
3.2. Identifying a rate function	50
3.3. Rate functions in product spaces	53
Chapter 4. Large deviations for stochastic processes	57
4.1. Exponential tightness for processes	57
4.2. Large deviations under changes of time-scale	62
4.3. Compactification	64
4.4. Large deviations in the compact uniform topology	65
4.5. Exponential tightness for solutions of martingale problems	67
4.6. Verifying compact containment	71
4.7. Finite dimensional determination of the process rate function	73
Part 2. Large deviations for Markov processes and semigroup convergence	77
Chapter 5. Large deviations for Markov processes and nonlinear semigroup convergence	79
5.1. Convergence of sequences of operator semigroups	79
5.2. Applications to large deviations	82

Chapter 6. Large deviations and nonlinear semigroup convergence using viscosity solutions	97
6.1. Viscosity solutions, definition and convergence	98
6.2. Large deviations using viscosity semigroup convergence	106
Chapter 7. Extensions of viscosity solution methods	109
7.1. Viscosity solutions, definition and convergence	109
7.2. Large deviation applications	126
7.3. Convergence using projected operators	130
Chapter 8. The Nisio semigroup and a control representation of the rate function	135
8.1. Formulation of the control problem	135
8.2. The Nisio semigroup	141
8.3. Control representation of the rate function	142
8.4. Properties of the control semigroup \mathbf{V}	143
8.5. Verification of semigroup representation	151
8.6. Verifying the assumptions	155
Part 3. Examples of large deviations and the comparison principle	163
Chapter 9. The comparison principle	165
9.1. General estimates	165
9.2. General conditions in R^d	172
9.3. Bounded smooth domains in R^d with (possibly oblique) reflection	179
9.4. Conditions for infinite dimensional state space	184
Chapter 10. Nearly deterministic processes in R^d	199
10.1. Processes with independent increments	199
10.2. Random walks	207
10.3. Markov processes	207
10.4. Nearly deterministic Markov chains	219
10.5. Diffusion processes with reflecting boundaries	221
Chapter 11. Random evolutions	229
11.1. Discrete time, law of large numbers scaling	230
11.2. Continuous time, law of large numbers scaling	244
11.3. Continuous time, central limit scaling	260
11.4. Discrete time, central limit scaling	266
11.5. Diffusions with periodic coefficients	269
11.6. Systems with small diffusion and averaging	271
Chapter 12. Occupation measures	283
12.1. Occupation measures of a Markov process - Discrete time	284
12.2. Occupation measures of a Markov process - Continuous time	288
Chapter 13. Stochastic equations in infinite dimensions	293
13.1. Stochastic reaction-diffusion equations on a rescaled lattice	293
13.2. Stochastic Cahn-Hilliard equations on rescaled lattice	305
13.3. Weakly interacting stochastic particles	315

Appendix	343
Appendix A. Operators and convergence in function spaces	345
A.1. Semicontinuity	345
A.2. General notions of convergence	346
A.3. Dissipativity of operators	350
Appendix B. Variational constants, rate of growth and spectral theory for the semigroup of positive linear operators	353
B.1. Relationship to the spectral theory of positive operators	354
B.2. Relationship to some variational constants	357
Appendix C. Spectral properties for discrete and continuous Laplacians	367
C.1. The case of $d = 1$	368
C.2. The case of $d > 1$	368
C.3. $E = L^2(\mathcal{O}) \cap \{\rho : \int \rho dx = 0\}$	369
C.4. Other useful approximations	370
Appendix D. Results from mass transport theory	371
D.1. Distributional derivatives	371
D.2. Convex functions	375
D.3. The p -Wasserstein metric space	376
D.4. The Monge-Kantorovich problem	378
D.5. Weighted Sobolev spaces $H_\mu^1(R^d)$ and $H_\mu^{-1}(R^d)$	382
D.6. Fisher information and its properties	386
D.7. Mass transport inequalities	394
D.8. Miscellaneous	401
Bibliography	403
