Preface	xi
Chapter 1. Quasi-interpolation	1
1.1. Introduction	1
1.1.1. Exercise for a freshman	1
1.1.2. Simple approximation formula	4
1.2. Further examples	6
1.2.1. Errors of approximate quasi-interpolation	6
1.2.2. A simple application of the approximation formula (1.7)	8
1.2.3. Other basis functions	10
1.2.4. Examples of higher-order quasi-interpolants	13
1.2.5. Examples of multi-dimensional quasi-interpolants	17
Chapter 2. Error estimates for quasi-interpolation	19
2.1. Auxiliary results	19
2.1.1. Function spaces	19
2.1.2. Fourier transform	20
2.1.3. Convolutions	21
2.1.4. Radial functions	22
2.1.5. Multi-dimensional Poisson summation formula	22
2.2. Some properties of quasi-interpolants	23
2.2.1. Young's inequality for semi-discrete convolutions	23
2.2.2. An auxiliary function	25
2.2.3. Representations of the quasi-interpolant $\mathcal{M}_{h,\mathcal{D}}$	27
2.2.4. Relations to continuous convolutions	29
2.2.5. Poisson's summation formula for $\sigma_\alpha$	31
2.3. Pointwise error estimates for quasi-interpolation	33
2.3.1. Using the moments of $\eta$	33
2.3.2. Truncation of summation	35
2.3.3. Local estimate of the quasi-interpolation	36
2.3.4. Hölder continuous functions	38
2.3.5. Approximation of derivatives	40
2.4. $L_p$ -estimates of the quasi-interpolation error	41
2.4.1. Formulation of the result	41
2.4.2. Estimation of the remainder term	42
2.4.3. Remark on the best approximation	44
2.4.4. Local $L_p$ -estimates	45
2.5. Notes	45

Chapter 3. Various basis functions — examples and constructions	49
3.1. Introduction	49
3.2. Examples	49
3.2.1. One-dimensional examples	49
3.2.2. Examples of multi-variate basis functions	50
3.3. Basis functions for higher-order approximations	50
3.3.1. A general formula	50
3.3.2. Symmetric basis functions	51
3.3.3. Radial basis functions	52
3.3.4. Example	54
3.3.5. Anisotropic Gaussian function	56
3.4. Some other methods	57
3.4.1. Using a collection of different $\mathcal{D}$	58
3.4.2. Derivatives with respect to $\mathcal{D}$	59
3.5. Linear combinations of translates	60
3.5.1. Construction of the generating function (3.30)	60
3.5.2. The case of symmetric $\eta$	63
3.6. Matrix-valued basis functions	64
3.7. Diminishing the parameter $\mathcal{D}$	65
3.7.1. Perturbation of $\eta$	65
3.7.2. Combinations of translates	67
3.8. Notes	68
 Chapter 4. Approximation of integral operators	 69
4.1. Introduction	69
4.2. Hilbert transform	71
4.3. Harmonic potentials	74
4.3.1. Action on Gaussians	74
4.3.2. Action on higher-order basis functions	76
4.3.3. Semi-analytic cubature formulas	77
4.3.4. Numerical example	78
4.3.5. Gradient of the harmonic potential	79
4.4. Approximation properties	81
4.4.1. Rough error estimate	81
4.4.2. Quasi-interpolation error in Sobolev spaces of negative order	82
4.4.3. Cubature error for the harmonic potential	85
4.5. Application to boundary integral equation methods	86
4.5.1. Transformation of inhomogeneous problems	87
4.5.2. Error estimates	88
4.6. Notes	91
 Chapter 5. Cubature of diffraction, elastic, and hydrodynamic potentials	 93
5.1. Diffraction potentials	93
5.1.1. Higher-order formulas	94
5.1.2. Action of the one-dimensional diffraction potential on the Gaussian	94
5.1.3. General form of the convolution with Gaussian	96
5.1.4. Analytic expressions of the diffraction potential	96
5.2. Potentials of advection-diffusion operators	98

5.3. Elastic and hydrodynamic potentials	99
5.4. Two-dimensional potentials	100
5.4.1. Fundamental solutions	100
5.4.2. An auxiliary formula	100
5.4.3. Potentials of the Gaussian	101
5.4.4. Potentials of higher-order generating functions	102
5.4.5. Final form of the elastic and hydrodynamic potentials	105
5.4.6. Using matrix-valued basis functions	106
5.5. Three-dimensional potentials	108
5.5.1. Potentials of the Gaussian	109
5.5.2. Elastic potential of higher-order generating functions	110
5.5.3. Final form of the elastic and hydrodynamic potentials	112
5.6. Notes	113
Chapter 6. Some other cubature problems	115
6.1. Cubature of some pseudodifferential operators	115
6.1.1. Square root of the Laplacian	115
6.1.2. Higher-dimensional singular integrals	116
6.1.3. Biharmonic potential	119
6.2. Approximate solution of non-stationary problems	120
6.2.1. The Cauchy problem for the heat equation	120
6.2.2. The Cauchy problem for the wave equation	123
6.2.3. Vibrations of a plate	125
6.3. Potentials of anisotropic Gaussians	126
6.3.1. Second-order problems	127
6.3.2. Some special cases	128
6.3.3. Elastic and hydrodynamic potentials of anisotropic Gaussians	131
6.3.4. Potentials of orthotropic Gaussians	133
6.4. Potentials of higher-order generating functions for orthotropic Gaussians	134
6.5. Potentials of truncated Gaussians	136
6.5.1. Integral operators over bounded domains	136
6.5.2. Integral operators over the half-space	137
6.5.3. Harmonic potentials	138
6.5.4. Diffraction potentials	139
6.6. Notes	141
Chapter 7. Approximation by Gaussians	143
7.1. Approximation of entire functions	143
7.1.1. Approximants on coarse grids	143
7.1.2. Examples	145
7.2. High-order quasi-interpolation	147
7.2.1. Generating functions	147
7.2.2. Saturation error	148
7.3. Interpolation with Gaussian kernels	151
7.3.1. Lagrangian function	151
7.3.2. Simplification	154
7.3.3. Interpolation error	156
7.3.4. Spectral convergence	157

7.3.5. Exponential convergence	160
7.4. Orthogonal projection	162
7.5. Notes	163
Chapter 8. Approximate wavelets	165
8.1. Introduction	165
8.2. Approximate refinement equations	168
8.2.1. Approximate refinement equations for $\eta$	168
8.2.2. Examples of mask functions	170
8.3. Approximate multi-resolution analysis	171
8.3.1. Approximate chain of subspaces	171
8.3.2. Almost orthogonal decomposition	172
8.4. Approximate univariate wavelets	173
8.4.1. Gaussian as scaling function	173
8.4.2. Moments	175
8.4.3. Other examples	177
8.5. Approximate multi-variate wavelet decomposition	181
8.5.1. Projections onto $\mathbf{V}_0$	181
8.5.2. Projections onto $\mathbf{W}_0$	182
8.6. Proof of Theorem 8.6	183
8.6.1. Simplification of $G(\lambda)$	184
8.6.2. Error of replacing $G(\lambda)$ by $g(\lambda)$	184
8.6.3. Equations for the Fourier coefficients of $1/g$	185
8.6.4. Solution of (8.58)	188
8.6.5. Error of replacing $a_k$ by $\tilde{a}_k$	189
8.7. Potentials of wavelet basis functions	190
8.7.1. Representation of wavelet basis functions	190
8.7.2. Potentials of anisotropic Gaussians of a complex argument	192
8.7.3. Harmonic potentials of approximate wavelets	193
8.7.4. Diffraction potentials of approximate wavelets	194
8.7.5. Elastic and hydrodynamic potentials of approximate wavelets	194
8.8. Numerical example	195
8.9. Notes	196
Chapter 9. Cubature over bounded domains	197
9.1. Introduction	197
9.2. Simple approach	198
9.3. Application of the approximate refinement equations	200
9.3.1. Approximate factorization of the quasi-interpolant	200
9.3.2. Properties of the mask function $\tilde{\eta}$	201
9.3.3. Convolutions based on the remainder term	202
9.4. Boundary layer quasi-interpolants	203
9.4.1. Multi-resolution decomposition	203
9.4.2. Restriction of $\mathcal{A}_j$	204
9.4.3. Pointwise estimates	205
9.4.4. Numerical examples	207
9.4.5. $L_p$ -estimates for quasi-interpolants of functions in domains	210
9.4.6. $L_p$ -estimates for boundary layer quasi-interpolation	213
9.4.7. Estimates in weak norms	213

9.5. Cubature of potentials in domains	214
9.6. Anisotropic boundary layer approximate approximation	218
9.7. Potentials of tensor product generating functions	221
9.8. Notes	223
Chapter 10. More general grids	225
10.1. Uniform grids	225
10.1.1. Orthotropic grid	225
10.1.2. Non-orthogonal grid	226
10.1.3. Examples	227
10.2. Quasi-interpolants for data on perturbed uniform grids	230
10.2.1. Perturbed grid	230
10.2.2. Construction	231
10.2.3. Error estimates	231
10.2.4. Numerical experiments with quasi-interpolants	233
10.3. Non-uniformly distributed nodes	235
10.3.1. Description of construction and error estimate	235
10.3.2. Quasi-interpolation on domains	237
10.3.3. Quasi-interpolation on manifolds	240
10.3.4. Quasi-interpolant of general form	241
10.4. Notes	243
Chapter 11. Scattered data approximate approximations	245
11.1. Approximate partition of unity	246
11.1.1. Basis functions with compact support	246
11.1.2. Basis functions with non-compact support	247
11.2. Quasi-interpolants of a general form	249
11.2.1. Compactly supported basis functions	250
11.2.2. Quasi-interpolants with non-compactly supported basis functions	251
11.3. Computation of integral operators	252
11.4. Construction of the $\Theta$ -function with Gaussians	254
11.4.1. Approximate partition of unity on a piecewise uniform grid	254
11.4.2. Scattered nodes close to a piecewise uniform grid	256
11.4.3. Discrepancy as convolution	257
11.4.4. Construction of polynomials	260
11.4.5. Existence and uniqueness	261
11.4.6. Approximation error in the case $d_j = \mathcal{D}$	267
11.4.7. Approximation error in the case $d_j < \mathcal{D}$	268
11.4.8. Summary	273
11.4.9. Numerical experiments	276
11.5. Notes	279
Chapter 12. Numerical algorithms based upon approximate approximations — linear problems	281
12.1. Numerical solution of the Lippmann-Schwinger equation by approximate approximations	282
12.1.1. Problem	282
12.1.2. Error analysis for the collocation method	285
12.1.3. Numerical example	288

12.2.	Applications to the solution of boundary integral equations	289
12.2.1.	Boundary integral equations	289
12.2.2.	Boundary point method	292
12.2.3.	BPM for single layer potentials	294
12.2.4.	BPM for double layer potentials	295
12.2.5.	Numerical experiments	297
12.2.6.	Stability analysis	300
12.3.	Computation of multi-dimensional single layer harmonic potentials	306
12.3.1.	Asymptotic formulas	309
12.3.2.	Approximation error	313
12.3.3.	Cubature formula	314
12.3.4.	Basis functions	317
12.3.5.	Numerical examples	319
12.4.	Notes	320
Chapter 13.	Numerical algorithms based upon approximate approximations — non-linear problems	321
13.1.	Time-marching algorithms for non-linear parabolic equations	321
13.1.1.	One-step time-marching algorithms	321
13.1.2.	Higher-dimensional case	324
13.2.	Application to the non-stationary Navier-Stokes equations	327
13.2.1.	Integral equation formulation	328
13.2.2.	One-step time-marching algorithm	330
13.2.3.	Formulas for the plane problem	331
13.2.4.	Numerical example	333
13.2.5.	Formulas for $\mathbb{R}^n$ , $n > 2$	334
13.3.	Non-local evolution equations	339
13.3.1.	Joseph equation	340
13.3.2.	Sivashinsky equation	340
13.4.	Notes	342
	Bibliography	345
	Index	349
