Preface	ix
What Part II is about	ix
Highlights and interdependencies of Part II	xi
Acknowledgments	xiii
Contents of Part II of Volume Two	xvii
Notation and Symbols	xxiii
Chapter 10. Weak Maximum Principles for Scalars, Tensors, and Systems	1
1. Weak maximum principles for scalars and symmetric 2-tensors	2
2. Vector bundle formulation of the weak maximum principle for systems	9
3. Spatial maximum function and its Dini derivatives	24
4. Convex sets, support functions, ODEs preserving convex sets	32
5. Proof of the WMP for systems: time-dependent sets and avoidance sets	43
6. Maximum principles for weak solutions of heat equations	47
7. Variants of maximum principles	56
8. Notes and commentary	65
Chapter 11. Closed Manifolds with Positive Curvature	67
1. Multilinear algebra related to the curvature operator	69
2. Algebraic curvature operators and Rm	77
3. A family of linear transformations and their effect on $\mathbf{R}^2 + \mathbf{R}^\#$	89
4. Proof of the main formula for $D_{a,b}(\mathbf{R})$	94
5. The convex cone of 2-nonnegative algebraic curvature operators	105
6. A pinching family of convex cones in the space of algebraic curvature operators	116
7. Obtaining a generalized pinching set from a pinching family and the proof of Theorem 11.2	126
8. Summary of the proof of the convergence of Ricci flow	134
9. Notes and commentary	136
Chapter 12. Weak and Strong Maximum Principles on Noncompact Manifolds	139

1. Weak maximum principles for scalar heat-type equations	140
2. Mollifying distance functions on Riemannian manifolds	158
3. Weak maximum principle for parabolic systems	170
4. Strong maximum principle for parabolic systems	180
5. Applications to the curvature operator under the Ricci flow	192
6. Notes and commentary	195
Chapter 13. Qualitative Behavior of Classes of Solutions	197
1. Curvature conditions that are <i>not</i> preserved	197
2. Real analyticity in the space variables for solutions of the Ricci flow	210
Chapter 14. Local Derivative of Curvature Estimates	227
1. Introduction—fine versus coarse estimates	228
2. A quick review of the global derivative estimates	232
3. Shi’s local derivative estimates	235
4. Modified Shi’s local derivative estimates assuming bounds on some derivatives of curvatures of the initial metrics	244
5. Some applications of the local derivative estimates	251
6. Local heat equation and local Ricci flow	253
7. Notes and commentary	258
Chapter 15. Differential Harnack Estimates of LYH-type	259
1. Deriving the Harnack expression using Ricci solitons	259
2. Statement of the matrix Harnack estimate	263
3. Proofs: getting started with surfaces	265
4. Proof of the matrix Harnack estimate	268
5. A variant on Hamilton’s proof of the matrix Harnack estimate	287
6. Ricci solitons and ancient solutions attaining R_{\max}	293
7. Applications of Harnack estimates	300
8. Notes and commentary	303
Chapter 16. Perelman’s Differential Harnack Estimate	305
1. Entropy and differential Harnack estimates for the heat equation	306
2. Properties of the heat kernel and linear entropy formula on complete manifolds	314
3. Differential Harnack estimate and characterizing \mathbb{R}^n by linear entropy	325
4. Perelman’s differential Harnack estimate	335
5. Notes and commentary	355
Appendix D. An Overview of Aspects of Ricci Flow	357
1. Existence, uniqueness, convergence, and curvature evolution	357
2. The rotationally symmetric neckpinch	360
3. Curvature pinching, derivative, and Harnack estimates	365
4. Perelman’s energy, entropy, and associated invariants	369
5. Compactness, no local collapsing, and singularity models	373

Appendix E. Aspects of Geometric Analysis Related to Ricci Flow	379
1. Green's function	379
2. Positive and fundamental solutions to the heat equation	388
3. Li–Yau differential Harnack estimate	403
4. Gradient estimates for the heat equation	405
Appendix F. Tensor Calculus on the Frame Bundle	411
1. Introduction	411
2. Tensors as vector-valued functions on the frame bundle	412
3. Local coordinates on the frame bundle	414
4. The metric on the frame bundle	415
5. A natural frame field on $F\mathcal{M}$	416
6. Covariant differentiation	420
7. Curvature and commuting covariant derivatives	422
8. Reduction to the orthonormal frame bundle	423
9. Time dependent orthonormal frame bundle for solutions to the Ricci flow	426
10. The time vector field and its action on tensors	427
11. The heat operator and commutation formulas	429
12. Notes and commentary	431
Bibliography	433
Index	455
