

Contents

Introduction	ix
Chapter 1. The Skew Field of Quaternions	1
1.1. Definition of the Field of Quaternions \mathbb{H} and Elementary Formulae	1
1.2. Embeddings of \mathbb{C} into the Quaternions and Natural Unitary Groups	7
1.3. \mathbb{C} -linear Structures, Symplectic Structures and Orientation, Pauli Elements	9
1.4. Inner Automorphisms of \mathbb{H}	12
1.5. The Oriented Rotation Angle of the Inner Automorphism with Respect to the Natural Minkowski Metric	18
1.6. Link between Space-Time Geometry and Euclidean Geometry on the Quaternions	20
Chapter 2. Elements of the Geometry of S^3 , Hopf Bundles and Spin Representations	25
2.1. One-Parameter Groups of $SU(2)$ and $SO(E)$	25
2.2. Parallels of Latitude and Meridians on S^3	27
2.3. One-Parameter Subgroups of $SU(2)$ and Hopf Bundles	28
2.4. Spin Representations	40
2.5. The Infinitesimal $\text{Spin}_{\frac{1}{2}}$ -Representation	43
Chapter 3. Internal Variables of Singularity Free Vector Fields in a Euclidean Space	47
3.1. The Complex Line Bundle \mathbb{F}^a	47
3.2. Symplectic and Hermitian Structures on \mathbb{F}^a	52
3.3. Gradient Fields	54
3.4. Curvature Forms on Level Surfaces	56
3.5. Vector Fields Defined by Two-Forms	58
3.6. The Principal bundle \mathbb{F}^a and its Natural Connection Form	60
3.7. The Characteristic Principal Bundle	65
3.8. Horizontal and Periodic Lifts of Integral Curves	69
Chapter 4. Isomorphism Classes, Chern Classes and Homotopy Classes of Singularity Free Vector Fields in 3-Space	73
4.1. Isomorphism Classes of Characteristic Principal Bundles of Vector Fields	73
4.2. The Structure of Isomorphism Classes	77
4.3. Chern Classes	80
4.4. Mapping Degree and First Chern–de Rham Classes	94
4.5. Hodge-Morrey Decomposition	100

Chapter 5. Heisenberg Algebras, Heisenberg Groups, Minkowski Metrics, Jordan Algebras and $SL(2, \mathbb{C})$	107
5.1. Natural Symplectic Structure on a Plane in 3-Space	107
5.2. The Notion of a Heisenberg Algebra	112
5.3. Heisenberg Group and its Lie Algebra	115
5.4. $\mathcal{H}_{\text{red}}^a$ as a Semi-direct Product	119
5.5. A Heisenberg Algebra Structure on $\text{sp}(F)$	121
5.6. The Spin Group and the Skew Field of Quaternions are Determined by Only One Heisenberg Group	124
5.7. Scalar Products and Minkowski Metrics on the Heisenberg Algebra	126
5.8. Symplectic Group, Special Linear Groups and Lorentz group	128
Chapter 6. The Heisenberg Group and Natural C^* -Algebras of a Vector Field in 3-Space	131
6.1. The Heisenberg Group Bundle of a Vector Field	132
6.2. Infinite Dimensional Heisenberg Algebras and Infinite Dimensional Heisenberg Groups of Vector Fields	135
6.3. Maps Determined by Homomorphisms	140
6.4. Group Algebras of Infinite Dimensional Heisenberg Groups	143
6.5. The C^* -Group Algebra and the Twisted Convolution, the Weyl Algebra and the Poisson Algebra	153
Chapter 7. The Schrödinger Representation and the Metaplectic Representation	161
7.1. Definition of the Schrödinger Representation and Phase Space	161
7.2. Characteristic Ingredients of the Schrödinger Representation	166
7.3. The Infinitesimal Schrödinger Representation and Phase Space	175
7.4. Projective Representations of the Symplectic Group Constructed via the Schrödinger Representation	176
7.5. A Realization of the Metaplectic Group and the Metaplectic Representation	180
Chapter 8. The Heisenberg Group: A Basic Geometric Background of Signal Analysis and Geometric Optics	191
8.1. The Notion of a Signal	192
8.2. Time-Frequency Analysis and the Uncertainty Principle	193
8.3. Further Tools of Time-Frequency Analysis	196
8.4. Reconstruction Formulae	201
8.5. The Geometry Underlying Time-Frequency Analysis	202
8.6. The Radar Ambiguity Function	204
8.7. The Stone-von Neumann Theorem in Time-Frequency Analysis	205
8.8. Geometric Optics	206
8.9. Holography	210
Chapter 9. Quantization of Quadratic Polynomials	215
9.1. Elementary Observations on Information and its Transmission	215
9.2. Preservation of Information	217
9.3. The Poisson Algebra of all Homogeneous Quadratic Polynomials in Two Variables	221
9.4. The Quantization of Inhomogeneous Quadratic Polynomials	230

9.5. The Schrödinger Equation	237
9.6. State Spaces and Observables, Elements of Stochastic Interpretation	238
Chapter 10. Field Theoretic Weyl Quantization of a Vector Field in 3-Space	247
10.1. The Mathematical Setting	247
10.2. The Idea of Weyl Quantization of X	248
10.3. Weyl Quantization of Singularity Free Vector Fields in 3-Space	251
10.4. The Relation to the GNS Representation	258
10.5. The Influence of the Topology on the Weyl Quantization	263
Appendix A. Thermodynamics, Geometry and the Heisenberg Group by Serge Preston	269
A.1. Introduction	269
A.2. The Contact Structure of Homogeneous Thermodynamics	270
A.3. Gibbs Space. Legendre Surfaces of Equilibrium	270
A.4. Thermodynamical Metrics of Weinhold and Ruppeiner	271
A.5. Indefinite Thermodynamical Metric G of R. Mrugala	272
A.6. Levi-Civita Connection of the Metric G	273
A.7. Curvature Properties of G	274
A.8. The Heisenberg Group as the Thermodynamical Phase Space	275
A.9. Geodesics of the Metric G	279
A.10. Symplectization of the Manifold (P, θ, G)	281
A.11. Properties of the Metric \tilde{G}	282
A.12. Constitutive Hypersurface and its Lift to \tilde{P}	283
A.13. Hyperbolic Rotations and the Projectivization of \tilde{P}	284
A.14. Group Action of \mathcal{H}_n and the “Partial Orbit Structure” of \hat{P}	285
Appendix. Bibliography	289
Bibliography	291
