Preface	xi
Part 1. History, Basic Models, and Travelling Waves	1
Chapter 1. Introduction and a Brief Review of the History	3
Chapter 2. Basic Models	17
2.1. Introduction	17
2.2. Models	17
2.3. Comments	22
Chapter 3. Solitary and Periodic Travelling Wave Solutions	25
3.1. Introduction	25
3.2. Travelling Wave Solutions	25
3.3. Examples	27
3.4. The Poisson Summation Theorem and Periodic Wave Solutions	39
3.5. Comments	42
Part 2. Well-Posedness and Stability Definition	47
Chapter 4. Initial Value Problem	49
4.1. Introduction	49
4.2. Some Results about Well-Posedness	49
4.3. Some Results about Global Well-Posedness	57
4.4. Comments	58
Chapter 5. Definition of Stability	61
5.1. Introduction	61
5.2. Orbital Stability	61
5.3. Comments	64
Part 3. Stability Theory	67
Chapter 6. Orbital Stability—the Classical Method	69
6.1. Introduction	69
6.2. Stability of Solitary Wave Solutions for the GKdV	70
6.3. “Stability of the Blow-up” for a Class of KdV Equations	81
6.4. Comments	87
Chapter 7. Grillakis-Shatah-Strauss’s Stability Approach	91
7.1. Introduction	91

7.2. Geometric Overview of the Theory	91
7.3. Stability of Solitary Wave Solutions	93
7.4. Stability of Solitary Waves for KdV-Type Equations	98
7.5. On Albert-Bona's Spectrum Approach	99
7.6. Comments	100
Part 4. The Concentration-Compactness Principle in Stability Theory	103
Chapter 8. Existence and Stability of Solitary Waves for the GBO	105
8.1. Introduction	105
8.2. Solitary Waves for the GBO	107
8.3. Stability of Solitary Waves for the GBO Equations	119
8.4. Comments	124
Chapter 9. More about the Concentration-Compactness Principle	127
9.1. Introduction	127
9.2. Solitary Wave Solutions of Benjamin-Type Equations	127
9.3. Stability of Solitary Wave Solutions: the GKdV Equations	128
9.4. Stability of Solitary Wave Solutions: the Benjamin Equation	129
9.5. Stability of Solitary Wave Solutions: the Fourth-Order Equation	133
9.6. Stability of Solitary Wave Solutions: the GKP-I Equations	133
9.7. Comments	135
Chapter 10. Instability of Solitary Wave Solutions	137
10.1. Introduction	137
10.2. Instability of Solitary Wave Solutions: the GB Equations	139
10.3. Fifth-Order Korteweg-de Vries Equations	150
10.4. A Generalized Class of Benjamin Equations	152
10.5. Linear Instability and Nonlinear Instability	153
10.6. Comments	157
Part 5. Stability of Periodic Travelling Waves	159
Chapter 11. Stability of Cnoidal Waves	161
11.1. Introduction	161
11.2. Stability of Cnoidal Waves with Mean Zero for KdV Equation	164
11.3. Stability of Constant Solutions for the KdV Equation	174
11.4. Cnoidal Waves for the 1D Benney-Luke Equation	177
11.5. Angulo and Natali's Stability Approach	183
11.6. Comments	196
Part 6. APPENDICES	199
Appendix A. Sobolev Spaces and Elliptic Functions	201
A.1. Introduction	201
A.2. Lebesgue Space $L^p(\Omega)$	201
A.3. The Fourier Transform in $L^1(\mathbb{R}^n)$	201
A.4. The Fourier Transform in $L^2(\mathbb{R}^n)$	202
A.5. Tempered Distributions	202

A.6. Sobolev Spaces	204
A.7. Sobolev Spaces of Periodic Type	206
A.8. The Symmetric Decreasing Rearrangement	207
A.9. The Jacobian Elliptic Functions	208
Appendix B. Operator Theory	211
B.1. Introduction	211
B.2. Closed Linear Operators: Basic Theory	211
B.3. Pseudo-Differential Operators and Their Spectrum	229
B.4. Spectrum of Linear Operators Associated to Solitary Waves	231
B.5. Sturm-Liouville Theory	237
B.6. Floquet Theory	240
Bibliography	245
Index	255
