Preface	vii
An Overview	ix
Chapter 0. Morse Theory and Variational Problems	1
0.1. Compactness Conditions	2
0.2. Deformation Lemmas	2
0.3. Critical Groups	3
0.4. Minimax Principle	7
0.5. Linking	8
0.6. Local Linking	10
0.7. p -Laplacian	11
Chapter 1. Abstract Formulation and Examples	17
1.1. p -Laplacian Problems	20
1.2. A_p -Laplacian Problems	20
1.3. Problems in Weighted Sobolev Spaces	21
1.4. q -Kirchhoff Problems	22
1.5. Dynamic Equations on Time Scales	22
1.6. Other Boundary Conditions	23
1.7. p -Biharmonic Problems	25
1.8. Systems of Equations	25
Chapter 2. Background Material	27
2.1. Homotopy	28
2.2. Direct Limits	29
2.3. Alexander-Spanier Cohomology Theory	30
2.4. Principal \mathbb{Z}_2 -Bundles	34
2.5. Cohomological Index	36
Chapter 3. Critical Point Theory	45
3.1. Compactness Conditions	46
3.2. Deformation Lemmas	47
3.3. Minimax Principle	52
3.4. Critical Groups	53
3.5. Minimizers and Maximizers	55
3.6. Homotopical Linking	56
3.7. Cohomological Linking	58

3.8.	Nontrivial Critical Points	59
3.9.	Mountain Pass Points	60
3.10.	Three Critical Points Theorem	60
3.11.	Cohomological Local Splitting	61
3.12.	Even Functionals and Multiplicity	62
3.13.	Pseudo-Index	63
3.14.	Functionals on Finsler Manifolds	65
Chapter 4.	p -Linear Eigenvalue Problems	71
4.1.	Variational Setting	72
4.2.	Minimax Eigenvalues	74
4.3.	Nontrivial Critical Groups	76
Chapter 5.	Existence Theory	79
5.1.	p -Sublinear Case	79
5.2.	Asymptotically p -Linear Case	80
5.3.	p -Superlinear Case	84
Chapter 6.	Monotonicity and Uniqueness	87
Chapter 7.	Nontrivial Solutions and Multiplicity	89
7.1.	Mountain Pass Solutions	89
7.2.	Solutions via a Cohomological Local Splitting	90
7.3.	Nonlinearities that Cross an Eigenvalue	91
7.4.	Odd Nonlinearities	93
Chapter 8.	Jumping Nonlinearities and the Dancer-Fučík Spectrum	97
8.1.	Variational Setting	99
8.2.	A Family of Curves in the Spectrum	100
8.3.	Homotopy Invariance of Critical Groups	102
8.4.	Perturbations and Solvability	105
Chapter 9.	Indefinite Eigenvalue Problems	109
9.1.	Positive Eigenvalues	109
9.2.	Negative Eigenvalues	111
9.3.	General Case	112
9.4.	Critical Groups of Perturbed Problems	113
Chapter 10.	Anisotropic Systems	117
10.1.	Eigenvalue Problems	119
10.2.	Critical Groups of Perturbed Systems	125
10.3.	Classification of Systems	128
	Bibliography	135
