Preface	xi
Chapter 1. The Cauchy problem for linear nonlocal diffusion	1
1.1. The Cauchy problem	1
1.1.1. Existence and uniqueness	5
1.1.2. Asymptotic behaviour	6
1.2. Refined asymptotics	10
1.2.1. Estimates on the regular part of the fundamental solution	12
1.2.2. Asymptotics for the higher order terms	17
1.2.3. A different approach	20
1.3. Rescaling the kernel. A nonlocal approximation of the heat equation	22
1.4. Higher order problems	23
1.4.1. Existence and uniqueness	24
1.4.2. Asymptotic behaviour	25
1.4.3. Rescaling the kernel in a higher order problem	28
Bibliographical notes	29
Chapter 2. The Dirichlet problem for linear nonlocal diffusion	31
2.1. The homogeneous Dirichlet problem	31
2.1.1. Asymptotic behaviour	32
2.2. The nonhomogeneous Dirichlet problem	36
2.2.1. Existence, uniqueness and a comparison principle	36
2.2.2. Convergence to the heat equation when rescaling the kernel	38
Bibliographical notes	40
Chapter 3. The Neumann problem for linear nonlocal diffusion	41
3.1. The homogeneous Neumann problem	41
3.1.1. Asymptotic behaviour	42
3.2. The nonhomogeneous Neumann problem	45
3.2.1. Existence and uniqueness	46
3.2.2. Rescaling the kernels. Convergence to the heat equation	48
3.2.3. Uniform convergence in the homogeneous case	54
3.2.4. An L^1 -convergence result in the nonhomogeneous case	56
3.2.5. A weak convergence result in the nonhomogeneous case	57
Bibliographical notes	63

Chapter 4. A nonlocal convection diffusion problem	65
4.1. A nonlocal model with a nonsymmetric kernel	65
4.2. The linear semigroup revisited	69
4.3. Existence and uniqueness of the convection problem	76
4.4. Rescaling the kernels. Convergence to the local convection-diffusion problem	82
4.5. Long time behaviour of the solutions	90
4.6. Weakly nonlinear behaviour	96
Bibliographical notes	98
Chapter 5. The Neumann problem for a nonlocal nonlinear diffusion equation	99
5.1. Existence and uniqueness of solutions	100
5.1.1. Notation and preliminaries	100
5.1.2. Mild solutions and contraction principle	104
5.1.3. Existence of solutions	112
5.2. Rescaling the kernel. Convergence to the local problem	115
5.3. Asymptotic behaviour	118
Bibliographical notes	122
Chapter 6. Nonlocal p -Laplacian evolution problems	123
6.1. The Neumann problem	124
6.1.1. Existence and uniqueness	125
6.1.2. A precompactness result	128
6.1.3. Rescaling the kernel. Convergence to the local p -Laplacian	131
6.1.4. A Poincaré type inequality	137
6.1.5. Asymptotic behaviour	141
6.2. The Dirichlet problem	142
6.2.1. A Poincaré type inequality	144
6.2.2. Existence and uniqueness of solutions	146
6.2.3. Convergence to the local p -Laplacian	149
6.2.4. Asymptotic behaviour	153
6.3. The Cauchy problem	154
6.3.1. Existence and uniqueness	154
6.3.2. Convergence to the Cauchy problem for the local p -Laplacian	157
6.4. Nonhomogeneous problems	160
Bibliographical notes	161
Chapter 7. The nonlocal total variation flow	163
7.1. Notation and preliminaries	164
7.2. The Neumann problem	165
7.2.1. Existence and uniqueness	166
7.2.2. Rescaling the kernel. Convergence to the total variation flow	169
7.2.3. Asymptotic behaviour	174
7.3. The Dirichlet problem	175
7.3.1. Existence and uniqueness	176
7.3.2. Convergence to the total variation flow	180
7.3.3. Asymptotic behaviour	188
Bibliographical notes	189
Chapter 8. Nonlocal models for sandpiles	191

8.1.	A nonlocal version of the Aronsson-Evans-Wu model for sandpiles	191
8.1.1.	The Aronsson-Evans-Wu model for sandpiles	191
8.1.2.	Limit as $p \rightarrow \infty$ in the nonlocal p -Laplacian Cauchy problem	193
8.1.3.	Rescaling the kernel. Convergence to the local problem	195
8.1.4.	Collapse of the initial condition	197
8.1.5.	Explicit solutions	200
8.1.6.	A mass transport interpretation	210
8.1.7.	Neumann boundary conditions	212
8.2.	A nonlocal version of the Prigozhin model for sandpiles	213
8.2.1.	The Prigozhin model for sandpiles	214
8.2.2.	Limit as $p \rightarrow +\infty$ in the nonlocal p -Laplacian Dirichlet problem	214
8.2.3.	Convergence to the Prigozhin model	217
8.2.4.	Explicit solutions	219
	Bibliographical notes	222
Appendix A.	Nonlinear semigroups	223
A.1.	Introduction	223
A.2.	Abstract Cauchy problems	224
A.3.	Mild solutions	227
A.4.	Accretive operators	229
A.5.	Existence and uniqueness theorem	235
A.6.	Regularity of the mild solution	239
A.7.	Convergence of operators	241
A.8.	Completely accretive operators	242
	Bibliography	249
	Index	255
