Preface	ix
Chapter 1. Preliminaries	1
1.1. Flag manifolds, Grassmannians, Plücker coordinates and Plücker relations	1
1.2. Simple Lie algebras and groups	3
1.3. Poisson-Lie groups	8
Bibliographical notes	13
Chapter 2. Basic examples: Rings of functions on Schubert varieties	15
2.1. The homogeneous coordinate ring of $G_2(m)$	15
2.2. Rings of regular functions on reduced double Bruhat cells	24
Bibliographical notes	36
Chapter 3. Cluster algebras	37
3.1. Basic definitions and examples	37
3.2. Laurent phenomenon and upper cluster algebras	43
3.3. Cluster algebras of finite type	49
3.4. Cluster algebras and rings of regular functions	60
3.5. Conjectures on cluster algebras	63
3.6. Summary	64
Bibliographical notes	65
Chapter 4. Poisson structures compatible with the cluster algebra structure	67
4.1. Cluster algebras of geometric type and Poisson brackets	67
4.2. Poisson and cluster algebra structures on Grassmannians	73
4.3. Poisson and cluster algebra structures on double Bruhat cells	92
4.4. Summary	98
Bibliographical notes	99
Chapter 5. The cluster manifold	101
5.1. Definition of the cluster manifold	101
5.2. Toric action on the cluster algebra	102
5.3. Connected components of the regular locus of the toric action	104
5.4. Cluster manifolds and Poisson brackets	107
5.5. The number of connected components of refined Schubert cells in real Grassmannians	109
5.6. Summary	110
Bibliographical notes	110

Chapter 6. Pre-symplectic structures compatible with the cluster algebra structure	111
6.1. Cluster algebras of geometric type and pre-symplectic structures	111
6.2. Main example: Teichmüller space	115
6.3. Restoring exchange relations	127
6.4. Summary	130
Bibliographical notes	130
Chapter 7. On the properties of the exchange graph	133
7.1. Covering properties	133
7.2. The vertices and the edges of the exchange graph	135
7.3. Exchange graphs and exchange matrices	138
7.4. Summary	139
Bibliographical notes	139
Chapter 8. Perfect planar networks in a disk and Grassmannians	141
8.1. Perfect planar networks and boundary measurements	142
8.2. Poisson structures on the space of edge weights and induced Poisson structures on $\text{Mat}_{k,m}$	147
8.3. Grassmannian boundary measurement map and induced Poisson structures on $G_k(n)$	159
8.4. Face weights	165
8.5. Summary	171
Bibliographical notes	172
Chapter 9. Perfect planar networks in an annulus and rational loops in Grassmannians	175
9.1. Perfect planar networks and boundary measurements	175
9.2. Poisson properties of the boundary measurement map	181
9.3. Poisson properties of the Grassmannian boundary measurement map	191
9.4. Summary	196
Bibliographical notes	197
Chapter 10. Generalized Bäcklund–Darboux transformations for Coxeter–Toda flows from a cluster algebra perspective	199
10.1. Introduction	199
10.2. Coxeter double Bruhat cells	202
10.3. Inverse problem	207
10.4. Cluster algebra	214
10.5. Coxeter–Toda lattices	228
10.6. Summary	237
Bibliographical notes	237
Bibliography	239
Index	243
