Preface	xi
Chapter 1. The Krull-Remak-Schmidt Theorem	1
§1. KRS in an additive category	1
§2. KRS over Henselian rings	6
§3. $R$ -modules vs. $\widehat{R}$ -modules	7
§4. Exercises	9
Chapter 2. Semigroups of Modules	13
§1. Krull monoids	14
§2. Realization in dimension one	17
§3. Realization in dimension two	23
§4. Flat local homomorphisms	26
§5. Exercises	27
Chapter 3. Dimension Zero	29
§1. Artinian rings with finite Cohen-Macaulay type	29
§2. Artinian pairs	32
§3. Exercises	39
Chapter 4. Dimension One	41
§1. Necessity of the Drozd-Roĭter conditions	42
§2. Sufficiency of the Drozd-Roĭter conditions	45
§3. ADE singularities	50
§4. The analytically ramified case	52
§5. Multiplicity two	54
§6. Ranks of indecomposable MCM modules	56
§7. Why MCM modules?	57
§8. Exercises	58
Chapter 5. Invariant Theory	61
§1. The skew group ring	61
§2. The endomorphism algebra	65

§3. Group representations and the McKay-Gabriel quiver	71
§4. Exercises	77
Chapter 6. Kleinian Singularities and Finite CM Type	81
§1. Invariant rings in dimension two	81
§2. Kleinian singularities	83
§3. McKay-Gabriel quivers of the Kleinian singularities	91
§4. Geometric McKay correspondence	97
§5. Exercises	106
Chapter 7. Isolated Singularities and Dimension Two	109
§1. Miyata's theorem	109
§2. Isolated singularities	113
§3. Two-dimensional CM rings of finite CM type	117
§4. Exercises	120
Chapter 8. The Double Branched Cover	123
§1. Matrix factorizations	123
§2. The double branched cover	128
§3. Knörrer's periodicity	133
§4. Exercises	139
Chapter 9. Hypersurfaces with Finite CM Type	141
§1. Simple singularities	141
§2. Hypersurfaces in good characteristics	144
§3. Gorenstein rings of finite CM type	150
§4. Matrix factorizations for the Kleinian singularities	151
§5. Bad characteristics	159
§6. Exercises	160
Chapter 10. Ascent and Descent	163
§1. Descent	163
§2. Ascent to the completion	164
§3. Ascent along separable field extensions	170
§4. Equicharacteristic Gorenstein singularities	172
§5. Exercises	173
Chapter 11. Auslander-Buchweitz Theory	175
§1. Canonical modules	175
§2. MCM approximations and FID hulls	179
§3. Numerical invariants	189

§4. The index and applications to finite CM type	194
§5. Exercises	200
Chapter 12. Totally Reflexive Modules	203
§1. Stable Hom and Auslander transpose	203
§2. Complete resolutions	207
§3. Totally reflexive modules	209
§4. Exercises	215
Chapter 13. Auslander-Reiten Theory	217
§1. AR sequences	217
§2. AR quivers	224
§3. Examples	228
§4. Exercises	238
Chapter 14. Countable Cohen-Macaulay Type	241
§1. Structure	241
§2. Burban-Drozd triples	244
§3. Hypersurfaces of countable CM type	252
§4. Other examples	260
§5. Exercises	263
Chapter 15. The Brauer-Thrall Conjectures	267
§1. The Harada-Sai lemma	268
§2. Faithful systems of parameters	270
§3. Proof of Brauer-Thrall I	276
§4. Brauer-Thrall II	280
§5. Exercises	285
Chapter 16. Finite CM Type in Higher Dimensions	287
§1. Two examples	287
§2. Classification for homogeneous CM rings	293
§3. Exercises	295
Chapter 17. Bounded CM Type	297
§1. Hypersurface rings	297
§2. Dimension one	299
§3. Descent in dimension one	303
§4. Exercises	307
Appendix A. Basics and Background	309

§1. Depth, syzygies, and Serre's conditions	309
§2. Multiplicity and rank	313
§3. Henselian rings	317
Appendix B. Ramification Theory	321
§1. Unramified homomorphisms	321
§2. Purity of the branch locus	326
§3. Galois extensions	335
Bibliography	341
Index	355
