Preface	xi
Part 1. Properties of quasidisks	1
Chapter 1. Preliminaries	3
1.1. Quasiconformal mappings	3
1.2. Modulus of a curve family	6
1.3. Modulus estimates	7
1.4. Quasidisks	12
1.5. What is ahead	16
Chapter 2. Geometric properties	19
2.1. Reflection	19
2.2. The three-point condition	22
2.3. Reversed triangle inequality	25
2.4. Linear local connectivity	27
2.5. Decomposition	30
Chapter 3. Conformal invariants	33
3.1. Conformal invariants in a Jordan domain	33
3.2. Hyperbolic geometry	34
3.3. Bounds for hyperbolic distance	35
3.4. Geometry of hyperbolic segments	39
3.5. Uniform domains	39
3.6. Min-max property of hyperbolic segments	41
3.7. Harmonic measure	42
3.8. Harmonic quasisymmetry	43
3.9. Harmonic bending	46
3.10. Quadrilaterals	46
3.11. Extremal distance property	50
3.12. Quadrilaterals and harmonic quasisymmetry	52
Chapter 4. Injectivity criteria	59
4.1. Meromorphic functions	59
4.2. Locally bilipschitz mappings	62
4.3. Locally quasiconformal mappings	64
4.4. Jacobian of a conformal mapping	67
Chapter 5. Criteria for extension	69
5.1. Functions of bounded mean oscillation	69
5.2. Sobolev and finite energy functions	71

5.3. Quasiconformal mappings	73
5.4. Bilipschitz mappings	74
Chapter 6. Two-sided criteria	77
6.1. Linear local connectivity revisited	77
6.2. Hardy-Littlewood property	78
6.3. Lip_α -extension domains	81
6.4. Harmonic doubling condition	83
Chapter 7. Miscellaneous properties	87
7.1. Bloch functions	87
7.2. Comparable Dirichlet integrals	89
7.3. Quasiconformal groups	90
7.4. Homogeneity	90
7.5. Family of all quasicircles	93
7.6. Quasiconformal equivalence of $\overline{\mathbf{R}^3} \setminus \overline{D}$ and \mathbf{B}^3	94
Part 2. Some proofs of these properties	97
Chapter 8. First series of implications	99
8.1. Quasidisks and hyperbolic segments	100
8.2. Hyperbolic segments and uniform domains	104
8.3. Uniform domains and linear local connectivity	104
8.4. Linear local connectivity and the three-point condition	106
8.5. The three-point condition and quadrilaterals	107
8.6. Quadrilateral inequality and quasidisks	108
8.7. Reflections and quasidisks	112
8.8. Quasidisks and decomposability	114
Chapter 9. Second series of implications	117
9.1. Uniform domains and Schwarzian derivatives	118
9.2. Schwarzian and pre-Schwarzian derivatives	121
9.3. Pre-Schwarzian derivatives and local connectivity	123
9.4. Uniform domains are rigid	127
9.5. Rigid domains are linearly locally connected	132
9.6. Uniform domains have the min-max property	134
9.7. Min-max property and local connectivity	135
Chapter 10. Third series of implications	137
10.1. Quasidisks and BMO-extension	138
10.2. BMO-extension and the hyperbolic metric	138
10.3. Hyperbolic metric and hyperbolic segments	140
10.4. Apollonian metric in a quasidisk	144
10.5. Apollonian metric and hyperbolic segments	148
Chapter 11. Fourth series of implications	149
11.1. Harmonic bending and quasidisks	150
11.2. Quasidisks and quasiconformal extension domains	153
11.3. Homogeneity and quasidisks	153
11.4. Extremal distance domains	158
