

Index

- ψ_v -regular sequence, *see also* regular sequence
- w_v , *see also* distinguished place w_v

- Abel map, **179**, 181, 187, **391**, 392, 409, 411, 417
- adele ring, 193
- affinoid
 - admissible, 398
 - affinoid domain, x, xviii
 - Berkovich affinoid, 7, 123, 128
 - domain, **398**, 401
 - strict closed affinoid, 128–130
- Akhiezer, Naum, 14
- algebraic integer, xii, xiv, 27, 28, 30, 31, 33
 - totally real, ix, xii
- algebraically capacitable, xviii, xix, 1, 2, **4**, 5, 6, 20, 28, 39, **80**, 91, 106, 114, 117, 119, 120, 125, 129, 131, 159
 - with respect to ζ , **80**
- algorithm to compute nonarchimedean capacities, 22
- analytically accessible, **89**, 104–107, 116
- apportionment in House of Representatives, 160
- Arakelov functions, **74**
- Arakelov theory, xiii
- arc, **334**, 385
 - analytic, 378
 - circular, 58
 - smooth, 104, 105, 135
- Argument Principle, 11, 261
- Autissier, Pascal, xiii

- Baker, Matthew, 5, 336
- Balinski, Michael, 160
- band
 - $\text{Band}_N(k)$, **214**, 215, 219, 221, 233, 234, **237**, 238, 239, 249, 250, 257, 259, 264, 269–272, 274, 280–284, 295, 296, 298, 301, 312, 313, 315–317
 - coefficients patched by bands, 191, 214, 216, 221, 231, 234, 237
 - simultaneously when $\text{char}(K) = p > 0$, 231, 233–235
 - high-order, 295
- barrier, 334
- Basic Patching Lemma, **287**, 291, 292, 309
- basic well-distributed sequence, **98**, 171
- basis
 - L -rational, xv, 61, 64, **65**, 66–69, 191, 197, 209, 211–213, 219, 224, 230–232, 234, 243, 244, 247–249, 251, 257, 262, 263, 269, 271, 275, 280, 282, 299–301, 326–329
 - L^{sep} -rational, 64, 65, **66**, 67–69, 197, 198, 224, 230, 231, 234, 235, 237, 238, 241, 243, 247, 248, 269, 280, 328
 - scaled L -rational, **242**, 243, 246
- Berkovich
 - adelic neighborhood, 6, 129
 - adelic set, 6, 7, 128, 129
 - analytic space, 5, 120, 336
 - analytification, 120, 125
 - closure, 121, 125, 128
 - compact set, 130
 - curve, xii, xix, 120, 122
 - Green’s function, 120, 125
 - neighborhood, 7, 128
 - open set, 7, 130
 - quasi-neighborhood, 6, 7, 128–130
 - strict closed affinoid, 7, 128, 130
 - topology, 6
- Berkovich, Vladimir, 5, 120
- Bertrandias, Françoise, xii
- binomial theorem, 251
- block, Galois
 - $\text{Block}(i, j)$, **214**, 220, **237**, 238
 - coefficients patched block by block, 214, 219, 220
- boundary, 111
 - equilibrium distribution supported on, 37
 - exceptional set contained in, 81
 - of filled Julia set, 19
 - piecewise smooth, xiii, 103, 105, 133, 135, 202, 249, 257, 261
- Brouwer Fixed Point theorem, xv, xxi, **154**

- \mathbb{C} -simple set, **103**, 105, 133, 134, 200, 202
 $\mathcal{C}(\tilde{K}_v^{\text{sep}})$ is dense in $\mathcal{C}_v(\mathbb{C}_v)$, 64
 canonical distance
 $[z, w]_{\mathfrak{X}, \bar{s}}$, xx, xxi, **76**, 73–77, **137**, **163**,
 171, 176, 177, 331, 351
 normalization of, 163
 potential theory for, xxi, 137, **331**
