Preface	ix
Acknowledgments	xiii
Contents of Volume One and Parts I, II, and III of Volume Two	xv
Notation and Symbols	xvii
Chapter 27. Noncompact Gradient Ricci Solitons	1
1. Basic properties of gradient Ricci solitons	1
2. Estimates for potential functions of gradient solitons	9
3. Lower bounds for the scalar curvature of nonflat nonexpanding gradient Ricci solitons	15
4. Volume growth of shrinking gradient Ricci solitons	17
5. Logarithmic Sobolev inequality	26
6. Gradient shrinkers with nonnegative Ricci curvature	29
7. Notes and commentary	33
Chapter 28. Special Ancient Solutions	35
1. Local estimate for the scalar curvature under Ricci flow	35
2. Properties of singularity models	40
3. Noncompact 2-dimensional ancient solutions with finite width	49
4. Ancient solutions with positive curvature	63
5. Notes and commentary	66
Chapter 29. Compact 2-Dimensional Ancient Solutions	69
1. Statement of the classification result and outline of its proof	69
2. The Ricci flow equation on \mathcal{S}^2 and some intuition	70
3. The King–Rosenau solution in the various coordinates	73
4. A priori estimates for the pressure function	76
5. The almost everywhere vanishing of R_∞	79
6. First properties of the backward limit v_∞	81
7. Isoperimetric constant of metrics on \mathcal{S}^2	83
8. Characterizing round solutions	87
9. Classifying the backward pointwise limit	100
10. An unrescaled cigar backward Cheeger–Gromov limit	106
11. Irreducible components of $\nabla^3 v$	108
12. The heat-type equation satisfied by Q	111
13. That $Q = 0$ implies the solution is the King–Rosenau solution	117
14. The evolution equation for \bar{Q}	124
15. The quantity Q must be identically zero	125

16. The equivalence of Q and \bar{Q}	129
17. Notes and commentary	132
Chapter 30. Type I Singularities and Ancient Solutions	133
1. Reduced distance of Type A solutions	133
2. Reduced volume at the singular time for Type I solutions	145
3. Type I solutions have shrinker singularity models	154
4. Some results on Type I ancient solutions	159
5. Notes and commentary	169
Chapter 31. Hyperbolic Geometry and 3-Manifolds	171
1. Introduction to hyperbolic space	171
2. Topology and geometry of hyperbolic 3-manifolds	178
3. The Margulis lemma and hyperbolic cusps	185
4. Mostow rigidity	192
5. Seifert fibered manifolds and graph manifolds	193
6. Notes and commentary	194
Chapter 32. Nonsingular Solutions on Closed 3-Manifolds	197
1. Introduction	197
2. The main result on nonsingular solutions	200
3. The three cases of nonsingular solutions	203
4. The positive and zero cases of nonsingular solutions	207
5. The negative case—sequential limits must be hyperbolic	210
6. Notes and commentary	211
Chapter 33. Noncompact Hyperbolic Limits	213
1. Main results on hyperbolic pieces	214
2. Harmonic maps parametrizing almost hyperbolic pieces	219
3. Proof of the stability of hyperbolic limits	226
4. Incompressibility of boundary tori of hyperbolic pieces	237
5. Notes and commentary	254
Chapter 34. Constant Mean Curvature Surfaces and Harmonic Maps by IFT	257
1. Constant mean curvature surfaces	257
2. Harmonic maps near the identity of \mathcal{S}^n	260
3. Existence of harmonic maps near the identity of manifolds with negative Ricci curvature	266
4. Application of Mostow rigidity to the existence of isometries	273
5. Notes and commentary	278
Chapter 35. Stability of Ricci Flow	279
1. Linear stability of Ricci flow	280
2. Analytic semigroups and maximal regularity theory	287
3. Dynamic stability results obtained using linearization	296
4. Dynamic stability results obtained by other methods	304

Chapter 36. Type II Singularities and Degenerate Neckpinches	307
1. Numerical simulation of solutions with degenerate neckpinches	309
2. Matched asymptotic studies of degenerate neckpinches	318
3. Ricci flow solutions with degenerate neckpinch singularities	324
4. Concluding remarks	326
Appendix K. Implicit Function Theorem	327
1. The implicit function theorem	327
2. Hölder spaces and Sobolev spaces on manifolds	332
3. Harmonic maps and their linearization	336
4. Spectrum of Δ_d on p -forms on \mathcal{S}^n	347
5. Notes and commentary	352
Bibliography	353
Index	371
