Preface	ix
Chapter 1. Stationary Fokker–Planck–Kolmogorov Equations	1
1.1. Background material	1
1.2. Elliptic equations	7
1.3. Diffusion processes	11
1.4. Basic problems	17
1.5. Existence of densities	23
1.6. Local properties of densities	29
1.7. Regularity of solutions to divergence type equations	35
1.8. Complements, comments, and exercises	43
(i) Fractional Sobolev classes (43). (ii) Increasing Sobolev regularity of solutions (47). (iii) Renormalized solutions (48). (iv) Generalizations of the maximum principle of A.D. Aleksandrov and $k$ -Hessians (49). Comments (50). Exercises (53).	
Chapter 2. Existence of Solutions	55
2.1. The maximum principle and the Dirichlet problem	55
2.2. Positive solutions of divergence type equations	60
2.3. Lyapunov functions and a priori estimates	62
2.4. Construction of solutions to stationary Fokker–Planck–Kolmogorov equations	67
2.5. Complements, comments, and exercises	70
(i) Solvability of equations with potentials (70). (ii) Solvability of equations on manifolds (71). (iii) The absence of integrable solutions (73). (iv) Nonlinear equations (74). Comments (78). Exercises (79).	
Chapter 3. Global Properties of Densities	81
3.1. Square integrability of logarithmic gradients	81
3.2. Global Sobolev regularity	89
3.3. Upper estimates for densities	97
3.4. Harnack’s inequality and lower estimates for densities	99
3.5. Positivity of densities	107
3.6. Justification of the results on positivity	114
3.7. Complements, comments, and exercises	119
(i) Estimates of solutions on manifolds (119). (ii) More on Harnack’s inequality (119). (iii) The John–Nirenberg lemma (120). (iv) Differentiability of solutions with respect to a parameter (122). Comments (127). Exercises (128).	

---

Chapter 4. Uniqueness Problems	131
4.1. Uniqueness conditions	131
4.2. Cases of nonuniqueness	140
4.3. Integrable solutions	150
4.4. Equations with a potential	158
4.5. Complements, comments and exercises	160
(i) Equations on manifolds (160). (ii) Uniqueness of solutions of the Dirichlet problem for equations with low order terms (161). (iii) Weighted Sobolev classes (163). (iv) Bounds on the total variation and Kantorovich distances between solutions (169). Comments (173). Exercises (174).	
Chapter 5. Associated Semigroups	177
5.1. Generalities on semigroups	177
5.2. Associated semigroups	184
5.3. Invariance and $m$ -dissipativity	194
5.4. Invariance and uniqueness	202
5.5. Examples of uniqueness	205
5.6. Complements, comments, and exercises	208
(i) Essential self-adjointness of Dirichlet operators (208). (ii) Markov and Feller semigroups (210). (iii) Invariant measures of Markov semigroups (214). (iv) Existence of invariant measures (219). (v) Compactness of semigroups (222). (vi) Estimates of diffusion semigroups (228). (vii) Gradient estimates in the case of dissipative drifts (229). Comments (234). Exercises (236).	
Chapter 6. Parabolic Fokker–Planck–Kolmogorov Equations	241
6.1. Basic problems	241
6.2. Background material	245
6.3. Existence of densities	251
6.4. Local regularity	254
6.5. Local estimates	262
6.6. Existence of solutions to the Cauchy problem	265
6.7. Complements, comments, and exercises	272
(i) Gradient flows (272). (ii) Solvability of degenerate Fokker–Planck–Kolmogorov equations (275). (iii) Nonlinear parabolic equations for measures (278). Comments (283). Exercises (285).	
Chapter 7. Global Parabolic Regularity and Upper Bounds	287
7.1. A priori estimates with Lyapunov functions	287
7.2. Global upper bounds	294
7.3. Upper bounds for solutions to the Cauchy problem	298
7.4. Square integrability of logarithmic gradients	306
7.5. Complements, comments, and exercises	311
(i) The Nash–Aronson estimates (311). (ii) A generalization of Nash–Aronson type estimates (312). Comments (313). Exercises (314).	
Chapter 8. Parabolic Harnack Inequalities and Lower Bounds	315
8.1. Parabolic Harnack inequalities	315
8.2. Lower bounds for densities	318
8.3. Positivity of densities	321
8.4. Proof of the key lemma	329

8.5.	Complements, comments, and exercises	333
	(i) Trudinger's version of Moser's lemma (333). Comments (334).	
	Exercises (335).	
Chapter 9.	Uniqueness of Solutions to Fokker–Planck–Kolmogorov Equations	337
9.1.	Setting of the problem	337
9.2.	Examples of nonuniqueness	342
9.3.	The case of a diffusion matrix of class <i>VMO</i>	344
9.4.	The case of a Lipschitzian diffusion matrix	350
9.5.	Proof of the main lemma	357
9.6.	Uniqueness of integrable solutions	367
9.7.	Proofs of auxiliary lemmas	370
9.8.	Complements, comments, and exercises	373
	(i) Uniqueness for degenerate equations in the class of absolutely continuous measures (373). (ii) Probabilistic methods of proving uniqueness (377). (iii) Uniqueness for degenerate equations in the class of all measures (380). (iv) Uniqueness for the continuity equation (382). (v) Estimates in the total variation and Kantorovich metrics (387). (vi) Mean field games (397). Comments (399). Exercises (401).	
Chapter 10.	The Infinite-Dimensional Case	403
10.1.	Equations in infinite-dimensional spaces	403
10.2.	Properties of solutions	413
10.3.	Existence in the elliptic case	416
10.4.	Solvability of the Cauchy problem	422
10.5.	Complements, comments, and exercises	426
	(i) Uniqueness in the infinite-dimensional case (426). (ii) Infinite-dimensional nonlinear equations for measures (430). Comments (433). Exercises (435).
