Preface	xi
Chapter 1. Overview	1
1.1. Some questions about primes	1
1.2. The cast	2
1.3. Examples	4
1.4. $\pi$ , $\mathbf{\Pi}$ , and an extended notion of g-numbers	6
1.5. Notes	7
Chapter 2. Analytic Machinery	9
2.1. A function class	9
2.2. Measures	9
2.3. Mellin transforms	10
2.4. Norms	11
2.5. Convergence	11
2.6. Convolution of measures	12
2.7. Convolution of functions	15
2.8. The $\mathbf{L}$ and $\mathbf{T}$ operators	16
2.9. Notes	18
Chapter 3. $dN$ as an Exponential and Chebyshev's Identity	19
3.1. Goals and plan	19
3.2. Power series in measures	21
3.3. Inverses	22
3.4. The exponential on $\mathbf{V}$	23
3.5. Three equivalent formulas	27
3.6. Notes	28
Chapter 4. Upper and Lower Estimates of $N(\mathbf{x})$	29
4.1. Normalization and restriction	29
4.2. O-log density	30
4.3. Lower log density	33
4.4. An example with infinite residue but 0 lower log density	36
4.5. Extreme thinness is inherited	37
4.6. Regular growth	39
4.7. Notes	40
Chapter 5. Mertens' Formulas and Logarithmic Density	41
5.1. Introduction	41
5.2. Logarithmic density	41
5.3. The Hardy-Littlewood-Karamata Theorem	43

5.4.	Mertens' sum formula	45
5.5.	Mertens' product formula	46
5.6.	A remark on $\gamma$	47
5.7.	An equivalent form and proof of "only if"	48
5.8.	Tauber's Theorem and conclusion of the argument	49
5.9.	Notes	51
Chapter 6.	O-Density of g-integers	53
6.1.	Non-relation of log-density and O-density	53
6.2.	O-Criteria for O-density	56
6.3.	Sharper criteria for O-density	60
6.4.	Notes	62
Chapter 7.	Density of g-integers	63
7.1.	Densities and right hand residues	63
7.2.	Axer's Theorem	63
7.3.	Criteria for density	65
7.4.	An $L^1$ criterion for density	69
7.5.	Estimates of $N(x)$ with an error term	72
7.6.	Notes	76
Chapter 8.	Simple Estimates of $\pi(\mathbf{x})$	77
8.1.	Unboundedness of $\pi(\mathbf{x})$	77
8.2.	Can there be as many primes as integers?	78
8.3.	$\pi(\mathbf{x})$ estimates via regular growth	79
8.4.	Lower bounds for $\sum \mathbf{1}/p_i$ via lower log-density	81
8.5.	Notes	81
Chapter 9.	Chebyshev Bounds – Elementary Theory	83
9.1.	Introduction	83
9.2.	Chebyshev bounds for natural primes	83
9.3.	An auxiliary function	87
9.4.	Chebyshev bounds for g-primes	90
9.5.	A failure of Chebyshev bounds	95
9.6.	Notes	98
Chapter 10.	Wiener-Ikehara Tauberian Theorems	99
10.1.	Introduction	99
10.2.	Wiener-Ikehara Theorems	99
10.3.	The Fejér kernel	101
10.4.	Proof of the Wiener-Ikehara Theorems	104
10.5.	A W-I oscillatory example	108
10.6.	Notes	110
Chapter 11.	Chebyshev Bounds – Analytic Methods	111
11.1.	Introduction	111
11.2.	Wiener-Ikehara setup	112
11.3.	A first decomposition	113
11.4.	Further decomposition of $\mathbf{I}_{2,\sigma}(\mathbf{y})$	114
11.5.	Chebyshev bounds	116

11.6. Notes	117
Chapter 12. Optimality of a Chebyshev Bound	119
12.1. Introduction	119
12.2. The $g$ -prime system $\mathcal{P}_B$	119
12.3. Chebyshev bounds and the zeta function $\zeta_B(s)$	122
12.4. The counting function $N_B(x)$	124
12.5. Fundamental estimates	127
12.6. Proof of the Optimality Theorem	129
12.7. Notes	131
Chapter 13. Beurling's PNT	133
13.1. Introduction	133
13.2. A lower bound for $ \zeta(\sigma + it) $	133
13.3. Nonvanishing of $\zeta(1 + it)$	135
13.4. An $L^1$ condition and conclusion of the proof	137
13.5. Optimality – a continuous example	139
13.6. Optimality – a discrete example	144
13.7. Notes	148
Chapter 14. Equivalences to the PNT	151
14.1. Introduction	151
14.2. Implications	151
14.3. Sharp Mertens relation and the PNT	152
14.4. Optimality of the sharp Mertens theorem	154
14.5. Implications between $M(x) = o(x)$ and $m(x) = o(1)$	155
14.6. Connections of the PNT with $M(x) = o(x)$	156
14.7. Sharp Mertens relation and $m(x) = o(1)$	158
14.8. Notes	160
Chapter 15. Kahane's PNT	161
15.1. Introduction	161
15.2. Zeros of the zeta function	162
15.3. A lower bound for $ \zeta(\sigma + it) $	165
15.4. A Schwartz function and Poisson summation	166
15.5. Estimating the sum of a series by an improper integral	170
15.6. Conclusion of the proof	172
15.7. Notes	174
Chapter 16. PNT with Remainder	175
16.1. Introduction	175
16.2. Two general lemmas	176
16.3. A Nyman type remainder term	179
16.4. A dlVP-type remainder term	186
16.5. Notes	192
Chapter 17. Optimality of the dlVP Remainder Term	195
17.1. Background	195
17.2. Discrete random approximation	196
17.3. Generalized primes satisfying the Riemann Hypothesis	204

17.4.	Generalized primes with large oscillation	208
17.5.	Properties of $\mathbf{G}(z)$	209
17.6.	Representation of $\log \mathbf{G}(z)$ as a Mellin transform	210
17.7.	A template zeta function	214
17.8.	Asymptotics of $\mathbf{N}_B(\mathbf{x})$	218
17.9.	Asymptotics of $\psi_B(\mathbf{x})$	222
17.10.	Normalization and hybrid	226
17.11.	Notes	227
Chapter 18.	The Dickman and Buchstab Functions	229
18.1.	Introduction	229
18.2.	The $\psi(\mathbf{x}, \mathbf{y})$ function	230
18.3.	The $\phi(\mathbf{x}, \mathbf{y})$ function	233
18.4.	A Beurling version of $\psi(\mathbf{x}, \mathbf{y})$	234
18.5.	G-numbers with primes from an interval	235
18.6.	Other relations	237
18.7.	Notes	238
	Bibliography	239
	Index	243
