List of Figures	ix
Preface	xi
Notation	xiii
Chapter 1. Introduction	1
1.1. A Lattès map as a first example	3
1.2. Cell decompositions	6
1.3. Fractal spheres	7
1.4. Visual metrics and the visual sphere	11
1.5. Invariant curves	15
1.6. Miscellaneous results	17
1.7. Characterizations of Lattès maps	19
1.8. Outline of the presentation	21
1.9. List of examples for Thurston maps	26
Chapter 2. Thurston maps	29
2.1. Branched covering maps	29
2.2. Definition of Thurston maps	30
2.3. Definition of expansion	32
2.4. Thurston equivalence	34
2.5. The orbifold associated with a Thurston map	39
2.6. Thurston's characterization of rational maps	45
Chapter 3. Lattès maps	49
3.1. Crystallographic groups and Lattès maps	53
3.2. Quotients of torus endomorphisms and parabolicity	60
3.3. Classifying Lattès maps	65
3.4. Lattès-type maps	69
3.5. Covers of parabolic orbifolds	77
3.6. Examples of Lattès maps	83
Chapter 4. Quasiconformal and rough geometry	89
4.1. Quasiconformal geometry	89
4.2. Gromov hyperbolicity	94
4.3. Gromov hyperbolic groups and Cannon's conjecture	96
4.4. Quasisphears	98
Chapter 5. Cell decompositions	103
5.1. Cell decompositions in general	104

5.2. Cell decompositions of 2-spheres	107
5.3. Cell decompositions induced by Thurston maps	114
5.4. Labelings	124
5.5. Thurston maps from cell decompositions	130
5.6. Flowers	135
5.7. Joining opposite sides	139
Chapter 6. Expansion	143
6.1. Definition of expansion revisited	143
6.2. Further results on expansion	147
6.3. Lattès-type maps and expansion	152
Chapter 7. Thurston maps with two or three postcritical points	159
7.1. Thurston equivalence to rational maps	160
7.2. Thurston maps with signature (∞, ∞) or $(2, 2, \infty)$	161
Chapter 8. Visual Metrics	169
8.1. The number $m(x, y)$	172
8.2. Existence and basic properties of visual metrics	175
8.3. The canonical orbifold metric as a visual metric	180
Chapter 9. Symbolic dynamics	185
Chapter 10. Tile graphs	191
Chapter 11. Isotopies	199
11.1. Equivalent expanding Thurston maps are conjugate	200
11.2. Isotopies of Jordan curves	205
11.3. Isotopies and cell decompositions	209
Chapter 12. Subdivisions	217
12.1. Thurston maps with invariant curves	220
12.2. Two-tile subdivision rules	229
12.3. Examples of two-tile subdivision rules	240
Chapter 13. Quotients of Thurston maps	251
13.1. Closed equivalence relations and Moore's theorem	253
13.2. Branched covering maps and continua	256
13.3. Strongly invariant equivalence relations	260
Chapter 14. Combinatorially expanding Thurston maps	267
Chapter 15. Invariant curves	287
15.1. Existence and uniqueness of invariant curves	291
15.2. Iterative construction of invariant curves	300
15.3. Invariant curves are quasicircles	309
Chapter 16. The combinatorial expansion factor	315
Chapter 17. The measure of maximal entropy	327
17.1. Review of measure-theoretic dynamics	328
17.2. Construction of the measure of maximal entropy	331

Chapter 18. The geometry of the visual sphere	345
18.1. Linear local connectedness	347
18.2. Doubling and Ahlfors regularity	350
18.3. Quasisymmetry and rational Thurston maps	352
Chapter 19. Rational Thurston maps and Lebesgue measure	361
19.1. The Jacobian of a measurable map	362
19.2. Ergodicity of Lebesgue measure	364
19.3. The absolutely continuous invariant measure	367
19.4. Lattès maps, entropy, and Lebesgue measure	377
Chapter 20. A combinatorial characterization of Lattès maps	385
20.1. Visual metrics, 2-regularity, and Lattès maps	386
20.2. Separating sets with tiles	389
20.3. Short ϵ -chains	396
Chapter 21. Outlook and open problems	401
Appendix A	413
A.1. Conformal metrics	413
A.2. Koebe's distortion theorem	415
A.3. Janiszewski's lemma	418
A.4. Orientations on surfaces	420
A.5. Covering maps	424
A.6. Branched covering maps	425
A.7. Quotient spaces and group actions	439
A.8. Lattices and tori	443
A.9. Orbifolds and coverings	447
A.10. The canonical orbifold metric	453
Bibliography	467
Index	473
