Preface	xi
Introduction	xv
Part I.	1
Chapter 1. Hyperplane arrangements	3
1.1. Faces	4
1.2. Arrangements of small rank	8
1.3. Flats	9
1.4. Tits monoid and Birkhoff monoid	10
1.5. Bi-faces and Janus monoid	16
1.6. Order-theoretic properties of faces and flats	18
1.7. Arrangements under and over a flat	20
1.8. Cartesian product of arrangements	23
1.9. Generic hyperplanes and adjoints of arrangements	28
1.10. Separating hyperplanes, minimal galleries and gate property	29
1.11. Combinatorially isomorphic arrangements	35
1.12. Partial order on pairs of faces	36
1.13. Characteristic polynomial and Zaslavsky formula	39
Notes	44
Chapter 2. Cones	47
2.1. Cones and convexity	47
2.2. Case and base maps	52
2.3. Topology of a cone	54
2.4. Cutting and separating hyperplanes and gated sets	56
2.5. Gallery intervals	58
2.6. Charts and dicharts	61
2.7. Poset of top-cones	64
2.8. Partial-flats	68
Notes	74
Chapter 3. Lunes	75
3.1. Lunes	75
3.2. Nested faces and lunes	77
3.3. Decomposition of a cone into lunes	83
3.4. Restriction and extension of cones	88
3.5. Top-star-lunes	92
3.6. Conjugate top-cones	93

3.7.	Cartesian product of cones, gallery intervals and lunes	96
	Notes	99
Chapter 4.	Category of lunes	101
4.1.	Poset of top-lunes	101
4.2.	Two partial orders on lunes	104
4.3.	Maps involving lunes	107
4.4.	Category of lunes	108
4.5.	Categories associated to faces and flats	111
4.6.	Presentation of categories	112
4.7.	Action of the Birkhoff monoid on lunes	113
4.8.	Substitution product of chambers	116
	Notes	118
Chapter 5.	Reflection arrangements	119
5.1.	Coxeter groups and reflection arrangements	119
5.2.	Face-types, flat-types and lune-types	121
5.3.	Length, W -valued distance and weak order	124
5.4.	Subgroups of Coxeter groups	125
5.5.	Cycle-type function and characteristic polynomial	127
5.6.	Coxeter-Tits monoid	129
5.7.	Good reflection arrangements	132
	Notes	134
Chapter 6.	Braid arrangement and related examples	135
6.1.	Coordinate arrangement	135
6.2.	Rank-two arrangements	139
6.3.	Braid arrangement. Compositions and partitions	140
6.4.	Braid arrangement. Partial orders and graphs	148
6.5.	Braid arrangement. Linear compositions, partitions and shuffles	152
6.6.	Enumeration in the braid arrangement	156
6.7.	Arrangement of type B	161
6.8.	Arrangement of type D	169
6.9.	Graphic arrangements	170
	Notes	173
Chapter 7.	Descent and lune equations	177
7.1.	Descent equation	177
7.2.	Lune equation	183
7.3.	Witt identities	185
7.4.	Descent-lune equation for flats	189
7.5.	Descent and lune equations for partial-flats	189
7.6.	Faces and flats for left Σ -sets	191
7.7.	Descent equation for left Σ -sets	193
7.8.	Lune equation for left Σ -sets	199
7.9.	Lune equation for right Σ -sets	201
7.10.	Descent-lune equation for Π -sets	206
7.11.	Flat-based lattices	207
	Notes	209

Chapter 8.	Distance functions and Varchenko matrix	211
8.1.	Weights on half-spaces	211
8.2.	Sampling weights from a matrix	216
8.3.	Distance functions	218
8.4.	Varchenko matrix	220
8.5.	Symmetric Varchenko matrix	227
8.6.	Braid arrangement	232
8.7.	Type B arrangement	237
	Notes	238
Part II.		239
Chapter 9.	Birkhoff algebra and Tits algebra	241
9.1.	Birkhoff algebra	242
9.2.	Algebras of charts, dicharts and cones	246
9.3.	Tits algebra	249
9.4.	Left module of chambers	252
9.5.	Modules over the Tits algebra	255
9.6.	Filtration by flats of a right module	261
9.7.	Primitive part and decomposable part	263
9.8.	Over and under a flat. Cartesian product	264
9.9.	Janus algebra and its one-parameter deformation	266
9.10.	Coxeter-Tits algebra	272
	Notes	273
Chapter 10.	Lie and Zie elements	275
10.1.	Lie elements	275
10.2.	Lie in small ranks. Antisymmetry and Jacobi identity	280
10.3.	Zie elements	281
10.4.	Zie elements and primitive part of modules	288
10.5.	Zie in small ranks	289
10.6.	Substitution product of Lie	290
	Notes	296
Chapter 11.	Eulerian idempotents	299
11.1.	Homogeneous sections of the support map	299
11.2.	Eulerian idempotents	304
11.3.	Eulerian families, complete systems and algebra sections	309
11.4.	\mathbb{Q} -bases of the Tits algebra	311
11.5.	Families of Zie idempotents	315
11.6.	Eulerian idempotents for good reflection arrangements	320
11.7.	Extension problem and dimension of Lie	322
11.8.	Rank-two arrangements	326
11.9.	Rank-three arrangements	327
	Notes	331
Chapter 12.	Diagonalizability and characteristic elements	333
12.1.	Stationary distribution	333
12.2.	Diagonalizability and eigensections	339
12.3.	Takeuchi element	344

12.4.	Characteristic elements	349
12.5.	Type <i>A</i> Eulerian idempotents and Adams elements	356
12.6.	Type <i>B</i> Eulerian idempotents and Adams elements	360
	Notes	363
Chapter 13.	Loewy series and Peirce decompositions	367
13.1.	Primitive series and decomposable series	368
13.2.	Primitive series and socle series	370
13.3.	Radical series and primitive series	372
13.4.	Peirce decompositions, and primitive and decomposable series	373
13.5.	Left Peirce decomposition of chambers. Lie over flats	375
13.6.	Right Peirce decomposition of Zie. Lie under flats	378
13.7.	Two-sided Peirce decomposition of faces. Lie over & under flats	382
13.8.	Generation of Lie elements in rank one	387
13.9.	Rigidity of the left module of chambers	388
13.10.	Quiver of the Tits algebra	390
13.11.	Applications of Peirce decompositions to Loewy series	391
	Notes	394
Chapter 14.	Dynkin idempotents	397
14.1.	Dynkin elements	397
14.2.	Dynkin basis for the space of Lie elements	400
14.3.	Applications to affine hyperplane arrangements	403
14.4.	Orientation space	406
14.5.	Joyal-Klyachko-Stanley. Presentation of Lie	408
14.6.	Björner and Lyndon bases	417
14.7.	Coordinate arrangement	420
14.8.	Rank-two arrangements	421
14.9.	Classical (type <i>A</i>) Lie elements	424
14.10.	Type <i>B</i> Lie elements	435
	Notes	444
Chapter 15.	Incidence algebras	447
15.1.	Flat-incidence algebra	447
15.2.	Lune-incidence algebra	449
15.3.	Noncommutative zeta and Möbius functions	454
15.4.	Noncommutative Möbius inversion. Group-likes and primitives	460
15.5.	Characterizations of Eulerian families	462
15.6.	Lie-incidence algebra	465
15.7.	Additive and Weisner functions on lunes	470
15.8.	Subalgebras of the lune-incidence algebra	475
15.9.	Commutative, associative and Lie operads	476
	Notes	478
Chapter 16.	Invariant Birkhoff algebra and invariant Tits algebra	479
16.1.	Invariant Birkhoff algebra	480
16.2.	Invariant Tits algebra	480
16.3.	Solomon descent algebra	481
16.4.	Enumeration of face-types	483
16.5.	Structure constants of the invariant Tits algebra	486

16.6.	Invariant Lie and Zie elements	490
16.7.	Invariant lune-incidence algebra	491
16.8.	Invariant Eulerian idempotents	494
16.9.	Peirce decompositions	498
16.10.	Bilinear forms	501
16.11.	Garsia-Reutenauer idempotents (Type A)	503
16.12.	Bergeron idempotents (Type B)	507
	Notes	508
Appendices		511
Appendix A. Regular cell complexes		513
A.1.	Cell complexes	513
A.2.	Minimal galleries and gate property	514
	Notes	516
Appendix B. Posets		517
B.1.	Poset terminology	517
B.2.	Graded posets	518
B.3.	Semimodularity and join-distributivity	518
B.4.	Strongly connected posets	520
B.5.	Adjunctions between posets	521
	Notes	524
Appendix C. Incidence algebras of posets		525
C.1.	Incidence algebras and Möbius functions	525
C.2.	Radical of an incidence algebra	531
C.3.	Reduced incidence algebras	532
C.4.	Poset cocycles and deformations of incidence algebras	535
	Notes	544
Appendix D. Algebras and modules		545
D.1.	Modules	545
D.2.	Idempotents and nilpotents	547
D.3.	Split-semisimple commutative algebras	548
D.4.	Diagonalizability and Jordan-Chevalley decomposition	550
D.5.	Radical, socle and semisimplicity	553
D.6.	Invertible elements and zero divisors	555
D.7.	Lifting idempotents	556
D.8.	Elementary algebras	558
D.9.	Algebra of a finite lattice	563
	Notes	570
Appendix E. Bands		571
E.1.	Bands	571
E.2.	Distance functions	573
	Notes	576
