Preface	ix
Acknowledgments	xi
Chapter 1. Preliminaries	1
1.1. Banach algebras and Gelfand theory of commutative Banach algebras	1
1.2. Locally compact groups and examples	6
1.3. Haar measure and group algebra	12
1.4. Unitary representations and positive definite functions	18
1.5. Abelian locally compact groups	24
1.6. Representations and positive definite functionals	28
1.7. Weak containment of representations	30
1.8. Amenable locally compact groups	33
Chapter 2. Basic Theory of Fourier and Fourier-Stieltjes Algebras	37
2.1. The Fourier-Stieltjes algebra $B(G)$	38
2.2. Functorial properties of $B(G)$	46
2.3. The Fourier algebra $A(G)$, its spectrum and its dual space	50
2.4. Functorial properties and a description of $A(G)$	57
2.5. The support of operators in $VN(G)$	60
2.6. The restriction map from $A(G)$ onto $A(H)$	66
2.7. Existence of bounded approximate identities	72
2.8. The subspaces $A_\pi(G)$ of $B(G)$	78
2.9. Some examples	83
2.10. Notes and references	86
Chapter 3. Miscellaneous Further Topics	91
3.1. Host's idempotent theorem	91
3.2. Isometric isomorphisms between Fourier-Stieltjes algebras	96
3.3. Homomorphisms between Fourier and Fourier-Stieltjes algebras	101
3.4. Invariant subalgebras of $VN(G)$ and subgroups of G	107
3.5. Invariant subalgebras of $A(G)$ and $B(G)$	113
3.6. Comparison of $A(G_1) \widehat{\otimes} A(G_2)$ and $A(G_1 \times G_2)$	117
3.7. The w^* -topology and other topologies on $B(G)$	121
3.8. Notes and references	127
Chapter 4. Amenability Properties of $A(G)$ and $B(G)$	129
4.1. $A(G)$ as a completely contractive Banach algebra	129
4.2. Operator amenability of $A(G)$	132

4.3. Operator weak amenability of $A(G)$	138
4.4. The flip map and the antidiagonal	140
4.5. Amenability and weak amenability of $A(G)$ and of $L^1(G)$	144
4.6. Notes and references	152
Chapter 5. Multiplier Algebras of Fourier Algebras	153
5.1. Multipliers of $A(G)$	153
5.2. $M(A(G)) = B(G)$ implies amenability of G : The discrete case	160
5.3. $M(A(G)) = B(G)$ implies amenability of G : The nondiscrete case	167
5.4. Completely bounded multipliers	179
5.5. Uniformly bounded representations and multipliers	186
5.6. Multiplier bounded approximate identities in $A(G)$	191
5.7. Examples: Free groups and $SL(2, \mathbb{R})$	195
5.8. Notes and references	202
Chapter 6. Spectral Synthesis and Ideal Theory	205
6.1. Sets of synthesis and Ditkin sets	206
6.2. Malliavin's theorem for $A(G)$	210
6.3. Injection theorems for spectral sets and Ditkin sets	211
6.4. A projection theorem for local spectral sets	214
6.5. Bounded approximate identities I: Ideals	220
6.6. Bounded approximate identities II	228
6.7. Notes and references	234
Chapter 7. Extension and Separation Properties of Positive Definite Functions	237
7.1. The extension property: Basic facts	238
7.2. Extending from normal subgroups	242
7.3. Connected groups and SIN-groups	246
7.4. Nilpotent groups and 2-step solvable examples	250
7.5. The separation property: Basic facts and examples	257
7.6. The separation property: Nilpotent Groups	264
7.7. The separation property: Almost connected groups	268
7.8. Notes and references	273
Appendix A	277
A.1. The closed coset ring	277
A.2. Amenability and weak amenability of Banach algebras	280
A.3. Operator spaces	282
A.4. Operator amenability	284
A.5. Operator weak amenability	287
Bibliography	291
Index	303
