Preface	vii
Chapter 1. Bellman's equations with constant "coefficients" in the whole space	1
1. Finite-difference equations	1
2. Solvability of Bellman's equations	5
Chapter 2. Estimates in $L_p$ for solutions of the Monge-Ampère type equations	15
1. Some properties of $\lambda$ -concave functions	15
2. Monge-Ampère type elliptic and parabolic equations in the whole space	22
Chapter 3. The Aleksandrov estimates	31
1. Parabolic uniformly nondegenerate case	33
2. General parabolic case	43
3. Elliptic operators	47
Chapter 4. First results for fully nonlinear equations	55
1. The maximum principle and uniqueness of solutions in Sobolev classes	55
1:1. Parabolic operators	60
1:2. Elliptic operators	64
2. Passage to the limit for nonlinear operators in the Sobolev classes	67
Chapter 5. Finite-difference equations of elliptic type	77
1. Some elementary technical tools	77
2. Solvability of elliptic finite-difference equations	78
3. The way we proceed further	83
4. Some estimates for finite-difference elliptic equations with constant coefficients	85
5. Estimates for finite-difference elliptic equations of cut-off type with variable coefficients	92
Chapter 6. Elliptic differential equations of cut-off type	101
1. A particular case of equations in pure derivatives	101
2. General elliptic equations with Lipschitz continuous $H$	108
3. Minimax representation of certain functions	111
4. One step closer to nonlinear partial-differential operators	116
5. Proof of Theorem 6.2.6	120
6. The case of $H$ measurable in space variables	122

6:1. Some generalizations	124
6:2. Proof of Theorem 6.6.3	126
7. Proof of Theorem 6.6.20	130
Chapter 7. Finite-difference equations of parabolic type	135
1. Solvability of parabolic finite-difference equations	135
2. Some estimates for second-order finite-differences of solutions to parabolic equations with constant coefficients	138
3. Maximum principle for semi-discrete parabolic equations	142
4. Estimates for finite-difference parabolic equations with variable coefficients	144
Chapter 8. Parabolic differential equations of cut-off type	151
1. A particular case of equations in pure derivatives	151
2. General parabolic equations with Lipschitz continuous $H$	155
3. The case of $H$ measurable in time and space variables	158
4. Proof of Theorems 8.3.10 and 6.6.5	162
Chapter 9. A priori estimates in $C^\alpha$ for solutions of linear and nonlinear equations	165
1. Estimating the integrals of Green's functions over small sets	165
2. Auxiliary results	168
3. Proof of Theorems 9.1.1 and 9.1.2	173
4. Fang-Hua Lin's type estimates for elliptic and parabolic equations	177
5. Estimating functions that are $\mathcal{L}$ -harmonic outside small sets	182
6. The Harnack inequality and the interior Hölder continuity for $\mathcal{L}$ -harmonic functions	187
7. On the global modulus of continuity of solutions of nonlinear elliptic equations	196
8. On the global modulus of continuity of solutions of nonlinear parabolic equations	199
Chapter 10. Solvability in $W_{p,\text{loc}}^2$ of fully nonlinear elliptic equations	207
1. Main results	207
2. A priori estimates in $C_{\text{loc}}^{2+\alpha}$ for equations $F(D^2u) = 0$	216
3. Solvability in $C_{\text{loc}}^{2+\alpha}$ for equations $F(D^2v) = 0$ and estimates of sharp functions of $D^2u$	222
4. A priori estimates in $W_{p,\text{loc}}^2$	225
5. Proof of Theorems 10.1.10, 10.1.14, and 10.1.17	230
Chapter 11. Nonlinear elliptic equations in $C_{\text{loc}}^{2+\alpha}(\Omega) \cap C(\bar{\Omega})$	235
1. Main results	235
2. Characterizations of the spaces $C^{s+\alpha}$	236
3. Proof of Theorems 1.4 and 1.6	246
Chapter 12. Solvability in $W_{p,\text{loc}}^{1,2}$ of fully nonlinear parabolic equations	251
1. Main results	251
2. A priori estimates in $C_{\text{loc}}^{2+\alpha}$ for equations $\partial_t u + F(D^2u) = 0$	256
3. Solvability in $C_{\text{loc}}^{2+\alpha}$ for equations $\partial_t v + F(D^2v) = 0$ and estimates of the integral oscillations of $D^2u$	261

4. A priori estimates in $W_{p,\text{loc}}^{1,2}$	263
5. Proof of Theorems 12.1.7 and 12.1.10	266
Chapter 13. Elements of the $C^{2+\alpha}$ -theory of fully nonlinear elliptic and parabolic equations	271
1. Introduction	271
2. Characterizations of the spaces $C^{s+\alpha}(B_R^+)$	274
3. Solvability of model linear equations in $\hat{C}^{2+\alpha}(B_R)$	276
4. Solvability of the Laplace equation in $\hat{C}^{2+\alpha}(B_R^+)$	281
5. A priori estimates in $\hat{C}^{2+\alpha}(B_R)$ and $\hat{C}^{2+\alpha}(B_R^+)$ for linear equations with variable coefficients	286
6. Solvability in $\hat{C}^{2+\alpha}(B_R^+)$ of linear equations with variable coefficients	289
7. About the oscillation of $v/x^1$ near the flat boundary of $B_R^+$	291
8. A priori estimates in $\hat{C}^{2+\alpha}(B_1^+)$ for equations $F(D^2u, x) = 0$	296
9. The method of continuity	300
10. Proof of Theorem 13.1.4	303
11. Solvability in $\hat{C}^{2+\alpha}(B_1^+)$ for $F(D^2u) = f(x)$	305
12. Proof of Theorem 13.1.6	307
Chapter 14. Nonlinear elliptic equations in $W_p^2(\Omega)$	311
1. Main results	311
2. Boundary a priori estimates in the simplest case	315
3. A priori estimates in $W_p^2$ near the boundary and the proof of Theorem 14.1.3	320
4. Investigating when $W_{p,\text{loc}}^2(\check{B}_R^+)$ -solutions belong to $W_p^2(\check{B}_\rho^+)$	325
5. Proof of Theorem 14.1.5	326
Chapter 15. Nonlinear parabolic equations in $W_p^{1,2}$	329
1. Main results	329
2. Boundary a priori estimates in the simplest case	331
3. A priori estimates in $W_p^{1,2}$ near the boundary and the proof of Theorem 15.1.3	335
4. Proof of Theorem 15.1.4	339
Chapter 16. $C^{1+\alpha}$ -regularity of viscosity solutions of general parabolic equations	341
1. Generalities	341
2. Main results	343
3. Auxiliary results about linear equations	348
4. Estimating the difference of solutions of two different equations	351
5. Main estimate for solutions of an auxiliary cut-off equation	358
6. Proof of Theorem 16.2.8	360
Chapter 17. $C^{1+\alpha}$ -regularity of $L_p$ -viscosity solutions of the Isaacs parabolic equations with almost VMO coefficients	367
1. Main results	367
2. Auxiliary facts	370
3. Main estimate for solutions of (17.2.1)	372

4. Estimating the $C^\kappa$ -norm of solutions of (8.3.1)	376
5. Proof of Theorem 17.1.5	379
Chapter 18. Uniqueness and existence of extremal viscosity solutions for parabolic equations	381
1. Uniqueness of $C$ -viscosity solutions of parabolic equations	381
2. Proof of Lemma 18.1.7	385
3. Existence of maximal and minimal $L_p$ -viscosity solutions	395
4. Uniqueness of $L_p$ -viscosity solutions for parabolic Isaacs equations	400
Appendix A. Proof of Theorem 6.2.1	405
Appendix B. Proof of Lemma 9.2.6	409
Appendix C. Some tools from Real Analysis	413
1. Partitions, maximal and sharp functions	413
1:1. Partitions and stopping times	413
1:2. Maximal functions	416
1:3. Sharp functions	418
2. Sharp functions in a more classical settings	421
3. Restricted sharp functions in the presence of lateral boundaries	427
Bibliography	431
Index	439
