Introduction	xi
Chapter 1. From Groupoid to Algebra	1
1.1. Preliminaries	1
1.2. Getting Started	2
1.3. Haar Systems	9
1.4. Building $C^*$ -Algebras	13
Chapter 2. Groupoid Actions and Equivalence	29
2.1. Groupoid Actions	29
2.2. The Mackey-Glimm-Ramsay Dichotomy	38
2.3. Equivalence	43
2.4. Generalized Morphisms	52
2.5. Linking Groupoids	56
2.6. The Equivalence Theorem	59
2.7. Some Important Examples	60
2.8. Transitive Groupoid $C^*$ -Algebras	62
Chapter 3. Measure Theory	69
3.1. Radon Families	69
3.2. $\pi$ -systems	72
3.3. Complex Radon Measures	79
3.4. The Fell Topology on the Space of Subgroups	81
3.5. Borel Hilbert Bundles	85
3.6. The Hilbert Space $L^2(X, \mathcal{H})$	87
3.7. The Hilbert Space $L^2_\pi(G_u, \sigma_u, \mathcal{H}_\pi)$	90
3.8. The Quotient Borel Structure	93
Chapter 4. Proof of the Equivalence Theorem	95
4.1. The $C^*$ -Algebra of the Linking Groupoid	95
4.2. Approximate Units	101
Chapter 5. Basic Representation Theory	107
5.1. Invariant Ideals	107
5.2. The Support of a Representation	111
5.3. Inducing Representations	113
5.4. Supports of Induced Representations	120
5.5. Irreducible Representations	123
5.6. $C^*$ -Bundles	125
5.7. Type Structure	128
5.8. Closed Orbits	129

5.9. Inducing Irreducible Representations	135
5.10. The Non-Smooth Case	139
Chapter 6. The Existence and Uniqueness of Haar Systems	141
6.1. First Steps	141
6.2. Group Bundles	143
6.3. The Isotropy Groupoid and the Isotropy Map	145
6.4. Haar Systems on Étale Groupoids	150
6.5. Haar Systems on Equivalent Groupoids	151
6.6. Some Applications	153
Chapter 7. Unitary Representations	157
7.1. Quasi-invariant Measures	157
7.2. Unitary Representations	162
7.3. An Example: Regular Representations	165
Chapter 8. Renault's Disintegration Theorem	169
8.1. The Statement	169
8.2. The Proof	172
Chapter 9. Amenability for Groupoids	187
9.1. Some Comments on the Group Case	187
9.2. First Definitions	189
9.3. Amenable Groupoids	197
9.4. Amenable Maps	203
9.5. Amenability and Equivalence	216
9.6. Topological Invariant Means	218
9.7. Borel Equivalence	227
9.8. Applications and Examples	235
Chapter 10. Measurewise Amenability for Groupoids	243
10.1. Means	243
10.2. Measurewise Invariant Means	252
10.3. Fun with Means	255
10.4. Measurewise Amenability and Equivalence	266
10.5. Amenable Measures	274
10.6. An Application	276
Chapter 11. Comments on Simplicity	279
11.1. The Auxillary Groupoids	280
11.2. Restricting to the Isotropy	286
11.3. Renault's Simplicity Result	298
11.4. The Amenable Case	302
Appendix A. Duals and Topological Vector Spaces	315
A.1. The Strict Dual	315
A.2. Projective Tensor Products	317
A.3. The Dual of $C_0(X, L^1(Y, \alpha))$	319
A.4. The Dual of $L^\infty(Y) \odot_{L^\infty(X)} L^1(X)$	320
A.5. A Dense Subspace of $\mathcal{E}^{**}$	328
A.6. An Alternative Topology	329

Appendix B. Remarks on Blanchard's Theorem	331
Appendix C. The Inductive Limit Topology	343
Appendix D. Ramsay Almost Everywhere	345
Answers to Some of the Exercises	353
Bibliography	387
Notation and Symbol Index	393
Index	395
