

Contents

Chapter I. Introduction	1
Chapter II. Distributions and function spaces	9
II.1. Distributions	9
II.2. Sobolev spaces	11
II.3. Compactness of H_r^1 in L^q	17
II.4. Cotlar–Stein almost orthogonality lemma	19
II.5. The Pólya–Szegő inequality	23
II.6. The Paley–Wiener theorem	23
Chapter III. Spectral theory of nonselfadjoint operators	25
III.1. Basic theory of unbounded operators	25
III.2. Adjoint operators	30
III.3. Spectrum of a linear operator	33
III.4. Fredholm operators	38
III.5. Normal eigenvalues and the discrete spectrum	43
III.6. Operators in the Hilbert space: symmetric, normal, self-adjoint	48
III.7. Essential spectra and the Weyl theorem	50
III.8. The Schur complement	55
III.9. The Keldysh theory of characteristic roots	57
III.10. Quantum Mechanics examples	59
III.11. Spectrum of the Dirac operator	62
Chapter IV. Linear stability of NLS solitary waves	67
IV.1. Derrick’s instability theorem vs. linear stability analysis	67
IV.2. The Kolokolov stability criterion of NLS groundstates	69
Chapter V. Solitary waves of nonlinear Schrödinger equation	75
V.1. The Pokhozhaev identity	75
V.2. Existence of groundstates	78
V.3. Decay and regularity of solitary waves	82
V.4. Regularity and linear stability in pure power case	90
Chapter VI. Limiting absorption principle	97
VI.1. Agmon’s Appendix A	97
VI.2. Improvement at the continuous spectrum	100
VI.3. Limiting absorption principle for the Laplacian near the threshold	102
VI.4. Limiting absorption principle for the Dirac operator	105
VI.5. Analytic continuation of the free resolvent	108

Chapter VII. Carleman–Berthier–Georgescu estimates	115
VII.1. Heuristics	115
VII.2. Carleman–Berthier–Georgescu estimates for $D_m + V$	117
VII.3. Carleman–Berthier–Georgescu estimates for $J(D_m - \omega + V)$	131
VII.4. Absence of embedded eigenstates	133
VII.5. Exponential decay of eigenstates	135
Chapter VIII. The Dirac matrices	141
VIII.1. The Dirac–Pauli theorem	143
VIII.2. Possible number of real and imaginary Dirac matrices	150
Chapter IX. The Soler model	159
IX.1. The well-posedness of the Cauchy problem in Sobolev spaces	160
IX.2. Discrete symmetries	163
IX.3. Continuous symmetries	164
IX.4. Relation to the massive Thirring model	169
IX.5. Solitary waves of the nonlinear Dirac equation	170
IX.6. Linearization at a solitary wave	178
Chapter X. Bi-frequency solitary waves	183
X.1. The Bogoliubov symmetry and associated charges	184
X.2. Bi-frequency solitary waves	187
Chapter XI. Bifurcations of eigenvalues from the essential spectrum	191
XI.1. Bifurcations of eigenvalues from the essential spectrum	194
XI.2. Bifurcation of eigenvalues before the embedded threshold	194
XI.3. Bifurcation of eigenvalues beyond the embedded thresholds	196
Chapter XII. Nonrelativistic asymptotics of solitary waves	203
XII.1. Main results	204
XII.2. Solitary waves in the nonrelativistic limit: the case $f \in C$	208
XII.3. Positivity of $\phi_\omega^* \beta \phi_\omega$ and improved estimates	219
XII.4. Improved error estimates	229
XII.5. Solitary waves in the nonrelativistic limit: the case $f \in C^1$	232
XII.6. The Kolokolov condition for the nonlinear Dirac equation	239
Chapter XIII. Spectral stability in the nonrelativistic limit	243
XIII.1. Main results	244
XIII.2. The linearization operator	249
XIII.3. Bifurcations from the origin	254
XIII.4. Bifurcations from embedded thresholds	267
