

# Index

- $\alpha$ -limit set, 21
- absorption, 20
- attraction, 4, 20
- attractor-repeller pair, 67
- backwards
  - separated solutions, 155
- backwards truncation, 172
- chain recurrent set, 59
- characteristic multipliers, 111
- cocycle, 136, 139
  - asymptotically compact, 140
  - attractor, 138
  - bounded dissipative, 140
  - property, 136, 139
- collectively asymptotically compact
  - family of cocycles, 150
  - family of evolution processes, 169
  - family of semigroups, 12, 36, 150
- collectively bounded dissipative
  - family of cocycles, 150
  - family of semigroups, 36, 150
- continuity, 6, 35
- continuous
  - family of evolution processes, 169
  - family of semigroups, 36
- critical element, 81
- discrete
  - evolution process, 183
  - exponential dichotomy, 184
  - variations of constants formula, 184
- disjoint collection
  - of isolated invariant families, 168
  - of isolated invariant sets, 8, 45
  - of isolated lifted invariant sets, 156
- dissipative function, 135
- distance, 19
- driving semigroup, 134, 136, 139
- $\epsilon$ -chain, 59
- equilibrium, 19
  - hyperbolic, 109
  - non-degenerated, 106
  - point, 19
- evolution process, 2, 110, 138, 140
  - asymptotically autonomous, 171
  - autonomous, 2, 140
  - $C^1$ -discrete, 183
  - discrete, 140
  - dynamically gradient, 169
  - linear, 110
  - linear discrete, 183
  - non-autonomous, 2
- forward
  - dynamics, 134
  - truncation, 171
- geometrical structure stability, 220
- global attractor, 5, 20
- global solution, 3, 20, 184
  - bounded, 20, 134, 142
  - for an evolution process, 142
  - hyperbolic, 187, 202
  - through  $x$ , 20
  - through a point, 3
- gradient system, 53
- Hausdorff semidistance, 4, 19
- homoclinic orbit, 43
- homoclinic structure, 10
  - in the global attractor, 10, 62, 165
  - in the pullback attractor, 168
  - in the uniform attractor, 167
- hull of a function, 136
- image, 21
- invariance, 3, 19, 141
- isolated
  - equilibrium, 45
  - invariant family, 168
  - invariant set, 7, 45
  - lifted invariant set, 156
  - stationary solution, 45
- lifted invariant set, 156
- local
  - attractor, 67

- center manifold, 95
- manifolds, 94
- stable manifold, 92
- stable set, 12
- unstable manifold, 92
- unstable set, 43, 46, 154, 157
- unstable set at a time, 154
- unstable set of an isolated invariant set, 8
- locally Lipschitz continuous function, 18
- lower semicontinuity, 6, 35, 157
- Lyapunov function, 53, 166
- maximal
  - invariant set, 45
  - lifted invariant set, 156
- Morse decomposition, 67
- Morse-Smale
  - evolution process, 222
  - non-autonomous dynamical system, 226
  - semigroup, 12, 119
- negative invariance, 19
- neighborhood of a set, 7
- non-autonomous dynamical system, 137
- nonwandering set, 119
- $\omega$ -limit set, 21
- orbit, 109
  - entire relative to a point, 21
  - partial negative relative to a point, 21
  - partial positive, 21
  - positive, 21
- period, 109
  - map, 111
- periodic solution
  - normally hyperbolic, 114
  - orbitally asymptotically stable, 110
  - orbitally stable, 110
  - orbitally unstable, 110
- phase diagram, 222
  - isomorphism, 124, 222
- Poincaré map, 115
- positive
  - hull of a function, 136
  - invariance, 19
- pullback
  - attraction, 4, 141
  - attractor, 5, 134, 141
  - dynamics, 134
  - $\omega$ -limit set, 142
- repeller, 67
- resolvent set, 81
- section of the unstable set, 154
- semigroup, 2, 17
  - asymptotically compact, 24
  - bounded dissipative, 24
  - continuously differentiable, 81
  - dynamically gradient, 10, 60
  - eventually bounded, 24
  - gradient, 53
  - reversible, 12, 104, 119
- shift operator, 136
- skew-product semigroup, 139
- solution, 183
  - $p$ -periodic, 109
  - periodic, 109
  - stationary, 20
- spectral radius, 81
- spectrum, 81
- stable set, 12, 188
- uniform attraction, 4
- uniform attractor, 138, 144
- unstable set, 154, 157, 188
  - of an equilibrium, 42
  - of an invariant set, 57
  - of an isolated invariant set, 8
- upper semicontinuity, 6, 35, 151
