Preface	ix
Introduction	1
Part 1. AUTONOMOUS THEORY	15
Chapter 1. Semigroups and Global Attractors	17
1. Global attractors for semigroups	19
2. Examples of semigroups with global attractors	26
Notes	33
Chapter 2. Upper and Lower Semicontinuity	35
1. Upper semicontinuity	36
2. Examples with upper semicontinuity	38
3. Lower semicontinuity	42
4. Examples with lower semicontinuity	46
Chapter 3. Topological Structural Stability of Attractors	53
1. Gradient semigroups	53
2. Dynamically gradient semigroups	58
3. Dynamically gradient semigroups are gradient	66
4. Topological structural stability	75
5. Examples	78
Chapter 4. Neighborhood of a Critical Element	81
1. Invariant manifolds near an equilibrium point	81
2. Differentiability of invariant manifolds	88
3. Local invariant manifolds	92
4. Continuous dependence of invariant manifolds in C^1 topology	95
5. The λ -lemma	98
6. Permanence and continuity of critical elements	105
Chapter 5. Morse-Smale Semigroups	119
1. Basic notions	119
2. Structural stability of Morse-Smale semigroups	124
3. Examples	126
Part 2. NON-AUTONOMOUS THEORY	131
Chapter 6. Non-autonomous Dynamical Systems and Their Attractors	133
1. Pullback, uniform and skew-product attractors	138

Chapter 7. Upper and Lower Semicontinuity	147
1. Upper semicontinuity	149
2. Lower semicontinuity	153
3. Non-autonomous perturbations of an autonomous equation	157
4. Hyperbolic perturbation of parabolic equations	159
Chapter 8. Topological Structural Stability	165
1. Dynamically gradient skew-product semigroups	165
2. Dynamically gradient skew-product semigroups under perturbations	167
3. Gradient structure of pullback attractors	168
4. Application to asymptotically autonomous evolution processes	171
5. Example: a non-autonomous Chafee-Infante problem	174
6. Applications to ordinary differential equations	177
Chapter 9. Neighborhood of a Global Hyperbolic Solution	183
1. Introduction	183
2. Discrete exponential dichotomy	184
3. Unstable manifolds	188
4. Stable manifolds	198
5. Global hyperbolic solutions	202
6. Stable and unstable manifolds under perturbation	204
7. Permanence and continuity of hyperbolic global solutions	215
Chapter 10. Non-autonomous Morse-Smale Dynamical Systems	219
1. Morse-Smale evolution processes	221
2. Geometrical structural stability for skew-product semigroups	223
3. Applications	227
Bibliography	231
List of Figures	243
Index	245
