|---------------------------------------------------------------------------------------------|-----|
| Preface | vii |
| Chapter 1. Introduction | 1 |
| 1.1. What are Davenport–Zannier polynomials | 1 |
| 1.2. Dessins d’enfants and Galois theory | 4 |
| 1.3. What are weighted trees | 5 |
| Chapter 2. Dessins d’enfants: from polynomials through Belyĭ functions to weighted trees | 9 |
| 2.1. Rational function $f = P/R$ and its critical values | 9 |
| 2.2. Dessins d’enfants and Belyĭ functions | 11 |
| 2.3. Number fields | 14 |
| 2.4. Additional remarks about weighted trees | 16 |
| Chapter 3. Existence theorem | 19 |
| 3.1. Realizability of coverings | 19 |
| 3.2. Forests | 20 |
| 3.3. Stitching several trees to get one: the case $\gcd(\alpha, \beta) = 1$ | 20 |
| 3.4. Non-coprime weights | 22 |
| 3.5. Weak bound: polynomials and cacti | 22 |
| 3.6. Proof of the weak bound | 25 |
| Chapter 4. Recapitulation and perspectives | 27 |
| Chapter 5. Classification of unitrees | 29 |
| 5.1. Statement of the main result | 29 |
| 5.2. Weight distribution | 36 |
| 5.3. Brushes | 39 |
| 5.4. Trees with repeating branches of height 2 | 41 |
| 5.5. Trees with repeating branches of the type $(1, s, s + 1)$ | 45 |
| 5.6. Trees with repeating branches of the type $(1, t, 1)$ | 50 |
| 5.7. The trees A, B, \dots, T listed in Theorem 5.4 are unitrees | 53 |
| 5.8. Appendix: the inverse enumeration problem | 56 |
| Chapter 6. Computation of Davenport–Zannier pairs for unitrees | 59 |
| 6.1. Reciprocal polynomials | 59 |
| 6.2. Remarks about computation | 60 |
| 6.3. Stars and binomial series | 61 |
| 6.4. Forks and Hall’s conjecture | 62 |

| | |
|-------------------------------------------------------------------------|-----|
| 6.5. Jacobi polynomials | 64 |
| 6.6. Series F and G : trees of diameter 4 | 72 |
| 6.7. Series H and I : decomposable ordinary trees | 77 |
| 6.8. Series J | 80 |
| 6.9. Sporadic trees | 82 |
| Chapter 7. Primitive monodromy groups of weighted trees | 87 |
| 7.1. Monodromy group of a dessin | 87 |
| 7.2. Primitive and imprimitive groups | 89 |
| 7.3. A menagerie of groups | 91 |
| 7.4. Primitive groups containing a cycle: Gareth Jones's classification | 92 |
| 7.5. Main theorem: statement and commentaries | 94 |
| 7.6. Main theorem: proof | 95 |
| Chapter 8. Trees with primitive monodromy groups | 99 |
| Chapter 9. A zoo of examples and constructions | 137 |
| 9.1. Composition | 137 |
| 9.2. Difference of powers over \mathbb{Q} : infinite series | 140 |
| 9.3. Polynomials with a relaxed minimum degree condition | 141 |
| 9.4. Duality and self-duality | 143 |
| 9.5. A "historic" sporadic example | 146 |
| 9.6. Some sporadic examples of Beukers and Stewart | 148 |
| 9.7. Sporadic examples of "megamap invariant" | 152 |
| 9.8. One more application due to David Roberts | 154 |
| Chapter 10. Diophantine invariants | 155 |
| 10.1. Pell's equation: preliminaries | 155 |
| 10.2. When a quadratic orbit splits into two rational ones | 158 |
| 10.3. When the discriminant is a perfect square | 160 |
| 10.4. Numerical data | 160 |
| Chapter 11. Enumeration | 163 |
| 11.1. Enumeration according to the weight and the number of edges | 163 |
| 11.2. Dyck words and weighted Dyck words | 165 |
| 11.3. Proof of the three enumerative theorems | 167 |
| 11.4. Enumeration according to a passport | 169 |
| Chapter 12. What remains to be done | 175 |
| Bibliography | 179 |
| Index | 185 |
