

Index

- L_1 -entropy solution, 126
- L_1 -nonexpansion, 68–70
- 2d turbulence, 94–95
- 3d turbulence, 5, 89–94, 99

- adapted process, 169, 170
- anomalous scaling, 6
- Arzelà–Ascoli theorem, 161
- asymptotically sharp estimates, 4

- Bogolyubov–Krylov ansatz/method, 65
- Borel set, 162
- Borel sigma–algebra, 10, 162
- burgulence, 4–7, 95–99, 101–118, 127–128, 138

- central limit theorem (CLT), 152
- cocycle property, 28, 31

- De La Vallée–Poussin’s theorem, 159
- decaying burgulence, 98, 138
- Dini’s theorem, 159
- direct cascade of energy, 93, 94
- dissipation anomaly, 93, 94, 96
- dissipation range/scale, 4, 5, 90–92, 96–98, 102–110
- Donsker’s theorem, 142, 146
- Döblin method, 70

- energy, 4, 35, 75, 93, 94, 96, 110
- energy balance, 3, 27, 34, 35, 56, 61, 93, 96, 154
- energy dissipation, 2, 35, 57, 93
- energy range/scale, 5, 90, 103, 104
- energy spectrum, 5–7, 91–92, 95–98, 110–112, 127–133
- entropy solution, 123–134
- ergodicity, 152

- Fatou’s lemma, 157
- Fernique’s theorem, 168
- filtered measurable/probability space, 169–170
- flatness, 92, 109
- fractional Burgers equation, 153

- free/unforced Burgers equation, 55, 57, 137–138
- Fréchet space, 160
- Fubini’s theorem, 165

- Gagliardo–Nirenberg inequality, 22
- Galerkin approximation/projection, 25, 26
- Gaussian measure, 168
- generalised solution (in L_1), 78, 170
- Ginzburg–Landau equation, 154–156

- Haar system, 141
- high-frequency noise, 143–150
- hitting time, 170–171
- Hopf–Cole–Florin transformation, 2

- inertial range, 5, 7, 90, 96, 104, 109, 110, 117
- intermittency, 62, 92, 96, 109
- inviscid limit, 7, 96, 98, 99, 119–134
- Ito’s formula, 171–174

- K41 (Kolmogorov 1941) theory, 4–7, 89–99
- Kantorovich distance, 166, 167
- Kantorovich’s theorem, 43
- Kantorovich–Rubinstein theorem, 167
- kicked Burgers equation, 138–140, 143–152
- Kolmogorov inner scale, 4, 90
- Kolmogorov’s 2/3 law, 5, 91
- Kolmogorov–Chapman equality/relation, 40
- Kolmogorov–Obukhov law, 6, 92

- Landau–Kolmogorov inequality, 22
- law of a random variable, 10, 163–165
- Lax–Oleinik formula, 97, 119, 124
- Lebesgue’s dominated convergence theorem, 157
- Lipschitz–dual distance, 43, 163, 166
- Locally bounded mapping, 9
- Locally Lipschitz mapping, 9
- log–convexity of Lebesgue norms, 159
- Lyapunov function, 172

- Markov family/process, 41, 126, 170

- Markov property, 41
- Markov semigroup for measures/functions, 38, 40, 78, 126
- measurability, 10, 37, 161–164
- mixing, 4, 70–73, 80–85, 94, 97, 129, 133, 141, 143, 149, 151–153, 156
- monotone convergence theorem, 157
- multidimensional Burgers equation, 153–154

- Navier–Stokes system, 92–95, 99, 151–152
- non-Gaussian nature of turbulence, 110

- Oleinik’s estimate/maximum principle, 3, 49–53, 57, 124

- Polish spaces, 9
- portmanteau theorem, 42
- probability space, 162–166, 169–170
- Prokhorov’s Theorem, 44

- random field, 168
- random measure, 163
- random process, 10, 167, 169
- random variable, 10, 42, 163
- recurrence, 68
- red noise, 141–143, 152
- Reynolds number, 89–91
- Riesz–Thorin inequality, 159

- scaling exponent, 5, 6, 74
- Skorokhod’s representation theorem, 42
- smoothing, 47, 48, 55, 79
- Sobolev embedding, 18
- Sobolev norms/spaces, 9, 18, 22, 119, 160, 162
- space-homogeneous solution, 37, 58, 72, 92, 99, 104, 110, 114, 129
- space-homogeneous turbulence, 89, 91, 92, 94, 99
- splitting up method, 150
- stationary measure, 65–66, 70–76, 80, 94, 95, 98, 112, 113, 128–130, 141, 148, 151
- stationary solution, 65, 80, 92, 94, 99, 110, 148
- stopping time, 170
- strong law of large numbers (SLLN), 152
- strong Markov property, 170–171
- strong solution, 30–31, 35, 169, 172
- structure function, 5–7, 91, 95–98, 104–109, 113–118, 127, 128, 130

- transition probability, 38, 78, 126, 165, 170
- trigonometric basis, 13
- turbulence, 4–7, 89–99, 154

- uniform integrability, 159

- viscous scalar conservation laws, 2
- vorticity/vorticity stretching, 35, 61, 93–96, 109
- weak convergence of measures, 42–44
- weak solution, 35–36
- white noise, 14, 142
- Wiener measure/process, 167, 168
