Introduction	1
Notation and agreement	8
<b>Part 1. Stochastic Burgers Equation</b>	<b>11</b>
Chapter 1. Basic results	13
1.1. Introduction	13
1.2. Properties of the random force $\xi$	15
1.3. Deterministic Cauchy problem	20
Preliminaries	20
Well-posedness of equation (B)	23
1.4. Strong solutions of the stochastic Cauchy problem	30
Notion of a strong solution and its existence	30
Basic estimates for strong solutions	31
The balance of energy relation	34
The vorticity stretching	35
1.5. Weak solutions and space-homogeneous solutions	35
Weak solutions of (B)	35
Space-homogeneous random fields and solutions	37
1.6. The two Markov semigroups and the Markov property	37
The semigroup for measures	38
The semigroup for functions	39
Kolmogorov-Chapman relation and Markov property	40
1.7. Weak convergence of measures	42
1.8. Appendix: More on the deterministic Burgers equation	44
Analyticity of the flow of the deterministic equation (B)	44
Burgers equation with a regular force	46
Chapter 2. Asymptotically sharp estimates for Sobolev norms of solutions	49
2.1. Oleinik's estimate	49
A version of Oleinik's estimate	52
2.2. Upper bounds for moments of Sobolev norms of solutions	53
2.3. Energy balance and lower bounds for moments of norms of solutions	56
Bounds for moments of $H^m$ norms, $m \geq 1$	57
Bounds for moments of $W_\infty^m$ norms, $m \geq 0$	60
Bounds for moments of $W_p^m$ norms	60
Bounds for moments of $L_p$ norms	62

Chapter 3. Mixing in the stochastic Burgers equation	65
3.1. Stationary measure and the Bogolyubov-Krylov method	65
3.2. Recurrence lemmas and $L_1$ -nonexpansion	66
3.3. Uniqueness of the stationary measure and the mixing property	70
3.4. Moments of the stationary measure	73
Other scalings for the force $\eta$ in equation (B)	75
Chapter 4. Stochastic Burgers equation in the space $L_1$	77
4.1. Setting and definitions	77
4.2. Mixing for $L_1$ solutions	80
Chapter 5. Notes and comments, I	85
<b>Part 2. One-Dimensional Turbulence</b>	87
Chapter 6. Turbulence and Burgulence	89
Chapter 7. Rigorous burgulence	101
7.1. Dissipation scale	102
Energy and inertial ranges	103
7.2. Structure function and intermittency	104
Structure function	104
Dissipation range in the $x$ -presentation	108
Intermittency	109
7.3. Energy spectrum	110
7.4. The limiting in time behaviour	112
The energy spectrum	112
The structure function	113
7.5. Appendix: High-probability versions of the results above	114
Chapter 8. The Inviscid limit and Inviscid Burgulence	119
8.1. Cauchy problem for an auxiliary deterministic equation	119
8.2. Inviscid limit for the deterministic equation	121
8.3. Inviscid limit for the stochastic equation	124
The limiting process in $L_1$	125
8.4. Inviscid Burgulence	127
8.5. Mixing for the entropy solutions	128
Inviscid limit for the stationary measure for eq. (1.1.12)	128
Mixing for the entropy solutions	129
Time-asymptotic for the inviscid energy spectrum and structure function	130
Chapter 9. Notes and comments, II	133
<b>Part 3. Additional Material</b>	135
Chapter 10. Miscellanea	137
10.1. Other types of forces: Estimates, Burgulence and mixing	137
10.2. High-frequency kick forces	143
10.3. Exponential mixing and its consequences	151

Exponential mixing in the Burgers equation with kick-forces and red forces	151
Exponential mixing and ergodicity	152
10.4. Other equations	153
Chapter 11. Appendices	157
11.1. Appendix A: Preliminaries from analysis	157
11.2. Appendix B: Spaces of functions	160
11.3. Appendix C: Measurable spaces, probability spaces and transition probabilities	162
11.4. Appendix D: Kantorovich distance	166
11.5. Appendix E: Random processes and the Wiener process	167
11.6. Appendix F: Filtered probability spaces and Markov processes	169
11.7. Appendix G: Stopping and hitting times and the strong Markov property	170
11.8. Appendix H: Stochastic differential equations and Ito's formula	171
Chapter 12. Solutions for selected exercises	175
Acknowledgements	181
Bibliography	183
Index	191
