Preface	ix
Chapter 1. Sheaf theory	1
1.1. Sheaves	1
1.2. Pullback, push-forward, and base change	7
1.3. Open and closed embeddings	16
1.4. Tensor product and sheaf Hom	23
1.5. The right adjoint to proper push-forward	30
1.6. Relations among natural transformations	36
1.7. Local systems	41
1.8. Homotopy	51
1.9. More base change theorems	56
1.10. Additional notes and exercises	62
Chapter 2. Constructible sheaves on complex algebraic varieties	67
2.1. Preliminaries from complex algebraic geometry	67
2.2. Smooth pullback and smooth base change	74
2.3. Stratifications and constructible sheaves	80
2.4. Divisors with simple normal crossings	86
2.5. Base change and the affine line	90
2.6. Artin's vanishing theorem	94
2.7. Sheaf functors and constructibility	97
2.8. Verdier duality	102
2.9. More compatibilities of functors	105
2.10. Localization with respect to a \mathbb{G}_m -action	111
2.11. Homology and fundamental classes	117
2.12. Additional notes and exercises	124
Chapter 3. Perverse sheaves	129
3.1. The perverse t -structure	129
3.2. Tensor product and sheaf Hom for perverse sheaves	135
3.3. Intersection cohomology complexes	138
3.4. The noetherian property for perverse sheaves	144
3.5. Affine open subsets and affine morphisms	148
3.6. Smooth pullback	155
3.7. Smooth descent	160
3.8. Semismall maps	168
3.9. The decomposition theorem and the hard Lefschetz theorem	172
3.10. Additional notes and exercises	177

Chapter 4. Nearby and vanishing cycles	181
4.1. Definitions and preliminaries	181
4.2. Properties of algebraic nearby cycles	188
4.3. Extension across a hypersurface	192
4.4. Unipotent nearby cycles	199
4.5. Beilinson's theorem	202
4.6. Additional notes and exercises	211
Chapter 5. Mixed sheaves	217
5.1. Étale and ℓ -adic sheaves	217
5.2. Local systems and the étale fundamental group	225
5.3. Passage to the algebraic closure	230
5.4. Mixed ℓ -adic sheaves	235
5.5. \mathcal{D} -modules and the Riemann–Hilbert correspondence	242
5.6. Mixed Hodge modules	249
5.7. Further topics around purity	255
Chapter 6. Equivariant derived categories	261
6.1. Preliminaries on algebraic groups, actions, and quotients	261
6.2. Equivariant sheaves and perverse sheaves	268
6.3. Twisted equivariance	277
6.4. Equivariant derived categories	283
6.5. Equivariant sheaf functors	290
6.6. Averaging, invariants, and applications	296
6.7. Equivariant cohomology	304
6.8. The language of stacks	310
6.9. Fourier–Laumon transform	315
6.10. Additional exercises	323
Chapter 7. Kazhdan–Lusztig theory	325
7.1. Flag varieties and Hecke algebras	325
7.2. Convolution	329
7.3. The categorification theorem	333
7.4. Mixed sheaves on the flag variety	339
7.5. Parity sheaves	343
7.6. Soergel bimodules	348
7.7. Additional exercises	357
Chapter 8. Springer theory	361
8.1. Nilpotent orbits and the Springer resolution	361
8.2. The Springer sheaf	364
8.3. The Springer correspondence	368
8.4. Parabolic induction and restriction	372
8.5. The generalized Springer correspondence	380
8.6. Additional exercises	383
Chapter 9. The geometric Satake equivalence	387
9.1. The affine flag variety and the affine Grassmannian	387
9.2. Convolution	394
9.3. Categorification of the affine and spherical Hecke algebras	398

9.4. The Satake isomorphism	402
9.5. Exactness and commutativity	404
9.6. Weight functors	410
9.7. Standard sheaves and Mirković–Vilonen cycles	416
9.8. Hypercohomology as a fiber functor	424
9.9. The geometric Satake equivalence	428
9.10. Additional exercises	430
Chapter 10. Quiver representations and quantum groups	433
10.1. Quiver representations	433
10.2. Hall algebras and quantum groups	439
10.3. Convolution	444
10.4. Canonical bases for quantum groups	452
10.5. Mixed Hodge modules and categorification	457
10.6. Mixed ℓ -adic sheaves and the Hall algebra	463
10.7. Additional exercises	466
Appendix A. Category theory and homological algebra	467
A.1. Categories and functors	467
A.2. Monoidal categories	472
A.3. Additive and abelian categories	474
A.4. Triangulated categories	480
A.5. Chain complexes and the derived category	486
A.6. Derived functors	490
A.7. t -structures	497
A.8. Karoubian and Krull–Schmidt categories	504
A.9. Grothendieck groups	508
A.10. Duality for rings of finite global dimension	509
Appendix B. Calculations on \mathbb{C}^n	513
B.1. Holomorphic maps and cohomology	513
B.2. Constructible sheaves on \mathbb{C}^n , I	515
B.3. Local systems on open subsets of \mathbb{C}	521
B.4. Constructible sheaves on \mathbb{C}^n , II	524
B.5. Nearby cycles on \mathbb{C}^n	527
B.6. Equivariant sheaves on \mathbb{C}	536
Quick reference	541
Bibliography	545
Index of notation	557
Index	559
