Preface	xi
Chapter 1. Introduction	1
Chapter 2. Tools	9
2.1. Conventions and terminology	9
2.2. Basic theorems	16
2.3. Flatness	18
Exercises	21
Chapter 3. More tools	25
3.1. Introduction to ideal-adic completions	25
3.2. Uncountable transcendence degree for a completion	29
3.3. Power series pitfalls	31
3.4. Basic results about completions	32
3.5. Chains of prime ideals, fibers of maps	34
3.6. Henselian rings	36
3.7. Regularity and excellence	38
Exercises	41
Chapter 4. First examples of the construction	45
4.1. Universality	45
4.2. Elementary examples	47
4.3. Historical examples	48
4.4. Prototypes	51
Exercises	55
Chapter 5. The Inclusion Construction	59
5.1. The Inclusion Construction and a picture	59
5.2. Approximations for the Inclusion Construction	60
5.3. Basic properties of the constructed domains	63
Exercises	71
Chapter 6. Flatness and the Noetherian property	73
6.1. The Noetherian Flatness Theorem	73
6.2. Introduction to Insider Construction 10.7	81
6.3. Nagata's example	82
6.4. Christel's Example	83
6.5. Further implications of the Noetherian Flatness Theorem	84
Exercise	85

Chapter 7. The flat locus of an extension of polynomial rings	87
7.1. Flatness criteria	87
7.2. The Jacobian ideal and the smooth and flat loci	91
7.3. Applications to polynomial extensions	98
Exercises	101
Chapter 8. Excellent rings and formal fibers	103
8.1. Background for excellent rings	103
8.2. Nagata rings and excellence	109
8.3. Henselian rings	111
Exercises	113
Chapter 9. Height-one prime ideals and weak flatness	115
9.1. The limit-intersecting condition	115
9.2. Height-one primes in extensions of Krull domains	119
9.3. Flatness for Inclusion Construction 5.3	122
Exercises	124
Chapter 10. Insider Construction details	127
10.1. Localized polynomial rings over special DVRs	128
10.2. Describing the construction	130
10.3. The non-flat locus of Insider Construction 10.7	131
10.4. Preserving excellence with the Insider Construction	136
Chapter 11. Integral closure under extension to the completion	139
11.1. Integral closure under ring extension	139
11.2. Extending ideals to the completion	142
11.3. Comments and questions	145
Exercises	147
Chapter 12. Iterative examples	149
12.1. Iterative examples and their properties	149
12.2. Residual algebraic independence	154
Exercises	162
Chapter 13. Approximating discrete valuation rings by regular local rings	165
13.1. Local quadratic transforms and local uniformization	165
13.2. Expressing a DVR as a directed union of regular local rings	167
13.3. Approximating other rank-one valuation rings	170
Exercises	171
Chapter 14. Non-Noetherian examples of dimension 3	173
14.1. A family of examples in dimension 3	173
14.2. Two cases of Examples 14.1 and their spectra	177
Exercises	183
Chapter 15. Noetherian properties of non-Noetherian rings	185
15.1. A general question and the setting for this chapter	185
15.2. More properties of Insider Constructions	187
15.3. A four-dimensional non-Noetherian domain	189
Exercises	196

Chapter 16. Non-Noetherian examples in higher dimension	197
16.1. Higher dimensional non-Noetherian examples	197
16.2. A 4-dimensional prime spectrum	200
16.3. $D + M$ constructions, coherence, finite conductor domains	204
Exercises	207
Chapter 17. The Homomorphic Image Construction	209
17.1. Two construction methods and a picture	209
17.2. Approximations for Homomorphic Image Construction	211
17.3. Basic properties of the Approximation Domains	213
17.4. Noetherian flatness for homomorphic images	215
17.5. Weak Flatness for Homomorphic Image Construction 17.2	218
17.6. Inclusion Constructions are Homomorphic Image Constructions	219
17.7. Connecting the two constructions	223
Exercises	229
Chapter 18. Catenary local rings with geometrically normal formal fibers	231
18.1. History, terminology and summary	231
18.2. Geometrically normal formal fibers and the catenary property	233
18.3. Flatness for the intersection of finitely many ideals	237
18.4. Regular maps and geometrically regular formal fibers	238
18.5. Examples that are not universally catenary	239
18.6. The depth of the constructed rings	244
Exercises	244
Chapter 19. An Ogoma-like example	245
19.1. Cohen-Macaulay formal fibers	245
19.2. Constructing the Ogoma-like example	251
Chapter 20. Multi-ideal-adic completions of Noetherian rings	257
20.1. Ideal filtrations and completions	257
20.2. Basic mechanics for the multi-adic completion	258
20.3. Preserving Noetherian under multi-adic completion	262
20.4. Preserving excellence or Henselian under multi-adic completion	265
Exercises	267
Chapter 21. Noetherian flatness and multi-adic constructions	269
21.1. Flatness lemmas	269
21.2. Multi-adic inclusion constructions	270
Chapter 22. Idealwise algebraic independence	275
22.1. Idealwise independence, weakly flat and PDE extensions	275
22.2. Primarily independent elements	280
22.3. Residually algebraically independent elements	285
Exercises	292
Chapter 23. Idealwise algebraic independence II	293
23.1. Primary independence and flatness	293
23.2. Composition, base change and polynomial extensions	295
23.3. Passing to the Henselization	300
23.4. Summary diagram for the independence concepts	304

Chapter 24. Krull domains with Noetherian x -adic completions	307
24.1. Applying Inclusion Construction 5.3	308
24.2. Limit-intersecting elements	309
24.3. Non-Noetherian intersection/approximation domains	316
24.4. A birational connection and additional examples	322
Exercises	325
Chapter 25. Inclusion Constructions over excellent normal local domains	327
25.1. Primarily limit-intersecting extensions and flatness	327
25.2. Existence of primarily limit-intersecting extensions	330
Exercise	337
Chapter 26. Weierstrass techniques for generic fiber rings	339
26.1. Terminology, background and results	339
26.2. Variations on a theme by Weierstrass	343
Exercises	353
Chapter 27. Generic fiber rings of mixed polynomial-power series rings	355
27.1. Weierstrass implications for the ring $B = k[[X]][Y]_{(X,Y)}$	355
27.2. Weierstrass implications for the ring $C = k[Y]_{(Y)}[[X]]$	358
27.3. Subrings of the power series ring $k[[z, t]]$	361
27.4. Weierstrass implications for the localized polynomial ring A	364
27.5. Generic fibers of power series ring extensions	368
27.6. $\text{Gff}(R)$ and $\text{Gff}(S)$ for S an extension domain of R	369
27.7. Formal fibers of prime ideals in polynomial rings	371
27.8. Other results on generic formal fibers	373
Exercise	374
Chapter 28. Mixed polynomial-power series rings and relations among their spectra	375
28.1. Two motivations	375
28.2. Trivial generic fiber (TGF) extensions and prime spectra	378
28.3. Spectra for two-dimensional mixed polynomial-power series rings	379
28.4. Higher dimensional mixed polynomial-power series rings	385
Exercises	390
Chapter 29. Extensions of local domains with trivial generic fiber	391
29.1. General remarks about TGF extensions	392
29.2. TGF extensions with finite residue field extension	393
29.3. The case of transcendental residue extension	397
Exercise	400
Chapter 30. Constructions and examples discussed in this book	401
30.1. Construction techniques	401
30.2. Examples considered in the book	402
Bibliography	407
Index	417
