

Index

- (*)-point, 20
- C -orbit, 124
- C -trip, 124
 - minimal, 124
- λ -monotone function, 158
- ε -covering number, 14
- ε -entropy, 14
- p -additive function, 63
- q -cycle, 150
- q -semicycle, 150
- r -set, 54

- activation function, 139
- alternating algorithm, 126
- approximation error, 15, 28

- Banach-Alaoglu theorem, 35
- best approximation, 28, 53
- best approximation operator, 126
- bolt of lightning, 29
 - closed, 29, 100
 - extended, 101
 - maximal, 100
- Borel measure, 12, 36
- Borel set, 40

- Calkin-Wilf sequence, 165
- Cartesian product, 54
- Cauchy's functional equation, 60
- chain, 22
- characteristic function, 19
- complexity problem, 157
- conjugate operator, 43
- continued fraction, 165
- cross section, 49
- curse of dimensionality, 18
- cycle, 19, 113
 - minimal, 23, 113

- density property, 139
- difference operator, 62
- difference property, 63
- Diliberto-Straus algorithm, 9, 126
- extremal element, 28, 53

- Fubini's theorem, 55

- Gaussian function, 140
- Golomb's theorem, 105

- Hahn-Banach theorem, 140

- information complexity, 17
- information-based complexity, 18

- Jordan decomposition, 36

- Kolmogorov's superposition theorem, 112, 158
- Krein-Milman theorem, 40

- linear superposition, 111

- maximization process, 97
- MLP model, 139
- modulus of continuity, 71
- monic polynomial, 165

- natural projection, 40
- neural network, 139
 - deep, 162
 - shallow, 162
 - single hidden layer, 139
 - two hidden layer, 157
- non interpolation property, 27
 - minimal, 27
- non-expansive operator, 128

- orbit, 39

- path, 29
 - h_1 - h_2 , 46
 - closed, 29
 - extremal, 30
 - irreducible, 47
- path functional, 41, 147
- permissible function class, 115
- permissible line, 29
- plane wave, 1
- polynomial function, 62
- problem of computerized tomography, 1
- projection cycle, 103

- minimal, 107
- projection pursuit, 2
- proximal subspace, 46
- proximality, 46
- proximity map, 126
 - central, 126
- quotient space, 40, 44
- Radon transformation, 140
- ReLU function, 162
- representation set, 118
 - complete, 119
- ridge function, 1
 - generalized, 111
 - weighted, 52
- Riesz representation theorem, 140
- semicycle, 149
- sigmoidal function, 140
- smooth transition function, 166
- smoothness problem, 59
- Sobolev space, 15
- squashing function, 140
- stairlike polygon, 100
- Stone-Weierstrass theorem, 13, 140
- threshold, 139
- total variation of a measure, 36
- tractable problem, 18
- unicity set, 118
- uniform separation of measures, 12
- uniform separation of points, 12
- uniformly convex Banach space, 126
- uniformly smooth Banach space, 126
- uniqueness problem, 87, 118
- universal approximation property, 139
- universal approximation theorem, 141
- Urysohn's lemma, 26, 40
- variation of a function, 50
- wave equation, 41
- weak*, 35
 - cluster point, 35
 - compact set, 35
 - topology, 35
- weight, 139
- Zorn's lemma, 22
