

Contents

Chapter 1. Introduction	1
Chapter 2. Elements	11
1. Sets, relations, and functions	11
2. Diagrammatics of linear algebra	12
3. Algebras	22
4. Simplifying, clarifying, and abstracting	28
5. General categorical principles	29
Chapter 3. Planar trivalent diagrams	31
1. Small categories	31
2. Trivalent graphs	32
Chapter 4. The multi-category FA	39
1. Composition of double arrows	39
2. Reversible arrows and additional double arrows	65
Chapter 5. Triple arrows for FA	71
1. Algebraic identities as double arrows	71
2. The category of double arrows	73
3. Critical aspects of weakly invertible 1-arrows	74
4. Coalgebra axioms as triple arrows	84
Chapter 6. Surfaces in 3-space	87
1. Guide to terminology	87
2. Objects, 1-arrows, and double arrows	88
3. Triple arrows in \mathcal{S}	90
4. Quadruple arrows in the multi-category \mathcal{S}	97
5. Functorial equivalent multi-categories	109
Chapter 7. Beyond surfaces	119
1. Different objects and arrows	119
2. Weak inverses revisited	145
3. Higher order arrows in FA	157
4. Restricting the collections of arrows	168
Chapter 8. Parentheses and so forth	173
1. The Temperley-Lieb algebra	173
2. Other Catalan-like things	177
3. Higher associativities	183
4. Higher dimensional foams	188

Chapter 9. Knots in space	191
1. Oriented knots and higher categories	191
2. Reidemeister moves	195
3. The fundamental group and related invariants	200
4. The Jones polynomial	209
5. The braid group	214
6. More algebraic structures	215
7. Trivalent graphs	225
Chapter 10. Foams and surfaces in 4-space	241
1. Knotted surfaces	241
2. Foams in 4-space	253
3. Shalgebras and qualgebras	269
4. Homology	273
5. More abstract tensors	276
6. Conclusion	290
Chapter 11. Higher dimensional braids	293
1. Geometric braids	293
2. Glyphographic description of surface braids	295
3. Surface braids	298
4. Charts in 3- and 4-dimensions	322
5. Conclusion	338
Chapter 12. Globular multi-categories	341
1. Arrows and cells	342
2. Group presentations	349
3. Conclusion	355
Bibliography	357
Index	361
