

Contents

Preface	ix
Background	xiii
Chapter 1. A Probabilistic Averaging Technique	1
1. Level Sets	4
2. Concentration Bounds for Sums of Bernoulli Variables	11
Chapter 2. First Constructions of Epsilon-Nets	21
1. Deterministic	23
2. Probabilistic	26
3. Improved Probabilistic Analysis	31
Chapter 3. Refining Random Samples	37
1. Linear-sized Nets for Disks in \mathbb{R}^2	39
2. Partitioning Segments in \mathbb{R}^2	44
3. Application: Forbidden Subgraphs	52
Chapter 4. Complexity of Set Systems	57
1. VC-dimension	60
2. Shallow-cell Complexity	67
Chapter 5. Packings of Set Systems	75
1. Packing Half-Spaces in \mathbb{R}^d	77
2. A Packing Theorem for Combinatorial Set Systems	80
3. Applications of the Packing Theorem	85
Chapter 6. Epsilon-Nets: Combinatorial Bounds	89
1. A First Bound using Ghost Sampling	91
2. Optimal ϵ -Nets using Packings	96
Chapter 7. Epsilon-Nets: An Algorithm	101
1. Special Case: Linear-sized Nets	103
2. General Case	108
Chapter 8. Epsilon-Nets: Weighted Case	113
1. Special Case: Linear-sized Nets	115
2. General Case	121
3. Application: Rounding Linear Programs	128
Chapter 9. Epsilon-Nets: Convex Sets	131
1. Weak ϵ -nets	132

2. Application: Polytope Approximation	138
Chapter 10. VC-dimension of k -Fold Unions: Basic Case	143
1. Abstract Set Systems	145
2. Axis-Aligned Rectangles in \mathbb{R}^2	150
Chapter 11. VC-dimension of k -Fold Unions: General Case	157
1. Products of Set Systems	158
2. Geometric Set Systems in \mathbb{R}^d	162
3. Lower bounds on Epsilon-Nets	167
Chapter 12. Epsilon-Approximations: First Bounds	171
1. Proof using Induction	174
2. Proof using Discrepancy	178
Chapter 13. Epsilon-Approximations: Improved Bounds	185
1. Improved Analysis via Chaining	186
2. Near-Optimal Bounds via Partitioning	193
Chapter 14. Epsilon-Approximations: Relative Case	199
1. Relative and Sensitive Approximations	202
2. Improved Bounds for Relative Approximations	208
Chapter 15. Epsilon-Approximations: Functional Case	213
1. A Functional View of Approximations	216
2. Application: Sensitivity and Coresets for Clustering	220
Chapter 16. A Summary of Known Bounds	227
1. LIST: Complexity of Geometric Set Systems	228
2. LIST: Epsilon-Nets	233
3. LIST: Epsilon-Approximations	236
Bibliography	241
Index	247
