List of Figures	ix
Preface for Volumes II and III	xi
Acknowledgments	xvii
Chapter 9. Finite Algebras and Their Clones	1
9.1. Clones	1
9.2. Polarity in Clone Theory	7
9.3. The Spectrum of the Polar of a Clone	26
9.4. The Lattice of Clones on a 2-Element Set	36
9.5. Primal and Quasiprimal Algebras	49
9.6. The Maximal Clones	62
9.7. Properties of “Almost All” Finite Algebras	87
9.8. TC Clones	106
9.9. Free Spectra	116
Chapter 10. Abstract Clone Theory	125
10.1. Abstract Clones and their Homomorphisms	127
10.2. Representations of Clones	142
10.3. Presentations of Clones	158
10.4. Clone Homomorphisms and Concrete Functors	167
10.5. Products and CoProducts of Clones	183
10.6. $[k]^{\text{th}}$ Power Varieties	199
10.7. Category Equivalence of Varieties	216
10.8. The Interpretability Lattice—Basic Facts	232
10.9. The Interpretability Lattice—Filters and Mal’tsev Conditions	240
10.10. Hypervarieties	260
Chapter 11. Commutator Theory	271
11.1. Introduction	271
11.2. Centrality Relations, Term Conditions and Commutators	272
11.3. Examples	279
11.4. Congruence Modular Varieties	283
11.5. Extensions to Non-Modular Varieties	289
11.6. Solvability, Nilpotence, the Ring and Abelian Varieties	331
11.7. Residual Smallness	345
11.8. Finite Axiomatizability	355
11.9. Locally Finite Varieties with Restrictions on Finite Algebras	384

Bibliography	407
Index	423

List of Figures

9.1	The principal ideals below $\langle t_2 \rangle$ and below $\text{Aff}(\oplus)$ as well as the filter above $\langle x \oplus y \oplus z \rangle$, two views	42
9.2	The interval below $\{0, 1, \leq\}^\wedge$ in $\mathbf{L}(\text{Clo } 2)$.	44
9.3	Clones containing the ternary majority operation m_3 .	46
9.4	The filters above each of the clones $\langle x \vee (y \wedge z) \rangle$ and $\langle x \wedge (y \vee z) \rangle$, and the ideals below the same two clones. $\langle m_3 \rangle$ added for reference	47
9.5	Post's lattice of all clones on a 2-element set.	48
9.6	The ordered set \mathbf{T} : The polar of its order is not finitely generated	79
9.7	A zig-zag	80
9.8	The ordered set U_3	82
9.9	The ordered sets $\mathbf{C}_{2,2}(= \mathbf{T})$ and $\mathbf{C}_{3,2}$	86
10.1	Clone embeddings and extensions by definition	177
10.2	The lattice \mathbf{L}_i , which generates the variety \mathcal{L}_i .	198
10.3	The connection between the functors M_k and T_k	207
10.4	A pentagon in \mathbf{L}_{int}	237
10.5	Module varieties and \wedge -semidistributivity	241
11.1	To calculate $[f(\alpha \vee \eta), f(\beta \vee \eta)]$, first pull back through f to $\alpha \vee \eta$ and $\beta \vee \eta$. Their commutator $[\alpha \vee \eta, \beta \vee \eta]$ might not lie above η , so join with η . The image of this congruence under f is $[f(\alpha \vee \eta), f(\beta \vee \eta)]$.	285
11.2	The relations for Theorem 11.22.	286
11.3	The Sublattice of $\mathbf{Con } \mathbf{A}(\alpha)$ Generated by η_0, η_1 and $\Delta_{\alpha, \beta}$.	287
11.4	Relationships between Commutator Properties of Varieties	289
11.5	Gumm Difference Term	290
11.6	$\mathbf{D}_2 = \mathbf{Con } \mathbf{S}$	320
11.7	Relationships of separated intervals	324
11.8	Special relationships associate with an SD_\vee failure	328
11.9	A Sublattice of $\mathbf{Con } \mathbf{E}(\gamma)$.	352
11.10	McKenzie's automatic algebra \mathbf{R}	358
11.11	The Automaton for \mathbf{T}_3 with some loops and labels suppressed	360

- 11.12 The Automaton \mathbf{P}_3 with the loops omitted and most labels of the states and transitions not shown. 364
