Preface	ix
Part 1. Introduction to the Inverse Eigenvalue Problem of a Graph and Zero Forcing	1
Chapter 1. Introduction to and Motivation for the IEP- G	3
1.1. Forward Problems	3
1.2. Inverse Problems	4
1.3. Matrices, Forward Problems, and Structure	4
1.4. Inverse Eigenvalue Problems and Matrices with a Given Graph	8
1.5. Initial Results for the IEP- G	11
1.6. Connections of the IEP- G to Nodal Domains	13
Chapter 2. Zero Forcing and Maximum Eigenvalue Multiplicity	17
2.1. Introduction to Maximum Nullity and Minimum Rank	17
2.2. Introduction to Zero Forcing	19
2.3. Historical Background to the Minimum Rank Problem	22
2.4. Further Properties of Minimum Rank	26
2.5. Minimum Positive Semidefinite Rank and Zero Forcing Number	30
2.6. Colin de Verdière Type Parameters	32
2.7. The δ -Conjecture and the Graph Complement Conjecture	36
Part 2. Strong Properties, Theory, and Consequences	39
Chapter 3. Implicit Function Theorem and Strong Properties	41
3.1. Implicit Function Theorem	41
3.2. Strong Properties	45
3.3. Strong Properties for Sign Patterns	49
Chapter 4. Consequences of the Strong Properties	53
4.1. Number of Distinct Eigenvalues	53
4.2. Augmentation Lemma	56
4.3. The IEP- G for Small Graphs	57
4.4. Verification Matrices	61
4.5. Matrix Liberation Lemma	64
4.6. Minor Monotonicity	67
4.7. Guaranteed Strong Properties	70
Chapter 5. Theoretical Underpinnings of the Strong Properties	75
5.1. Spaces of Matrices	75
5.2. Manifolds and Tangent Spaces	76

5.3.	Implicit Function Theorem Revisited	83
5.4.	Strong Properties and Supergraph Lemma Revisited	86
5.5.	Bifurcation Lemma	89
5.6.	Tangent Space Matrix	90
5.7.	Matrix Liberation Lemma Revisited	91
5.8.	Future Work	92
Part 3. Further Discussion of Ancillary Problems		95
Chapter 6.	Ordered Multiplicity Lists of a Graph	97
6.1.	Multiplicity Lists for Special Families of Graphs	97
6.2.	Constructive Techniques	102
6.3.	Related Graph Parameters	108
6.4.	Path Removal and Multiplicities for Trees	109
Chapter 7.	Rigid Linkages	115
7.1.	Rigid Linkages	115
7.2.	Rigid Shortest Linkages	119
Chapter 8.	Minimum Number of Distinct Eigenvalues	123
8.1.	Number of Distinct Eigenvalues for Adjacency Matrices	123
8.2.	Basic Results	124
8.3.	Strong Properties and q	132
8.4.	Joins and Graphs with Small q	134
8.5.	A Nordhaus-Gaddum Conjecture for q	138
8.6.	Minimum Number of Distinct Eigenvalues for Trees	140
Part 4. Zero Forcing, Propagation Time, and Throttling		147
Chapter 9.	Zero Forcing, Variants, and Related Parameters	151
9.1.	Standard Zero Forcing, $Z(G)$	151
9.2.	Universal Definitions for Zero Forcing	160
9.3.	Positive Semidefinite Zero Forcing, $Z_+(G)$	160
9.4.	Skew Forcing, $Z_-(G)$	167
9.5.	Connected and Total Zero Forcing	179
9.6.	Additional Zero Forcing Parameters Related to the IEP- G	181
9.7.	Rigid Linkage Zero Forcing	183
9.8.	Minor Monotone Floors of Zero Forcing Parameters	187
9.9.	Power Domination, $\gamma_P(G)$	191
9.10.	Cops and Robbers, $c(G)$	196
9.11.	Average Values and Random Graphs	200
9.12.	Topics Not Covered	201
Chapter 10.	Propagation Time and Capture Time	203
10.1.	Universal Definitions for Forcing Propagation Time	203
10.2.	Z-Propagation Time	206
10.3.	Z_+ -Propagation Time	212
10.4.	Z_- -Propagation Time	216
10.5.	Propagation Time for Power Domination	222
10.6.	Capture Time for Cops and Robbers	225

10.7. Expected Propagation Time for Probabilistic Zero Forcing	227
10.8. Topics Not Covered	229
Chapter 11. Throttling	231
11.1. Universal Definitions for Forcing Throttling	231
11.2. Z -throttling	235
11.3. Z_+ -throttling	240
11.4. Z_- -throttling	244
11.5. Throttling for Power Domination	248
11.6. Throttling for Cops and Robbers	251
11.7. Product Throttling	255
11.8. Topics Not Covered	260
Appendix A. Graph Terminology and Notation	261
Bibliography	269
Index	281
