Preface	vii
Introduction	ix
Acknowledgments	xv
Preliminaries and Conventions	xvii
Chapter 1. Categories	1
1.1. Monoids and categories	1
1.2. Monoid homomorphisms and functors	9
1.3. Natural transformations	11
1.4. Isomorphisms and equivalences of categories	13
1.5. Algebras and linear categories	16
1.6. Algebra homomorphisms and linear functors	23
Chapter 2. Representations	25
2.1. Representations and modules	25
2.2. Module categories of an algebra and of a linear category	28
2.3. Finer correspondence between algebras and linear categories	33
2.4. Products and direct sums of modules over a linear category	41
2.5. Finitely generated projective modules over a linear category	46
2.6. Ideals and factor categories of a linear category	53
2.7. Constructions of algebras and of linear categories by quivers	54
2.8. The representation category of a quiver and the module category of a linear category	57
Chapter 3. Classical Covering Theory	61
3.1. Galois coverings	61
3.2. Module categories of \mathcal{C} and of $\mathcal{C}/_c G$	63
Chapter 4. Basics of 2-Categories	65
4.1. 2-categories	65
4.2. String diagrams	74
4.3. Lax functors, colax functors, and pseudofunctors	78
4.4. Adjoints and equivalences	79
4.5. Adjoints and limits, colimits	88
4.6. 2-adjoints and 2-equivalences	92
Chapter 5. 2-Categorical Covering Theory under Pseudo-actions of a Group	95
5.1. 2-categories of G -categories and of pseudo- G -categories	95
5.2. The 2-category of G -graded categories	100

5.3.	G -covering functors	101
5.4.	Orbit categories	103
5.5.	Orbit 2-functors, diagonal 2-functors and their 2-adjoints	116
5.6.	Smash products	118
5.7.	2-categorical Cohen–Montgomery duality	121
5.8.	Proof of Theorem 5.7.1	121
5.9.	Equivalences in the 2-categories $G\text{-Cat}$ and $G\text{-GrCat}$	132
5.10.	On the second orbit categories and the right smash products	140
Chapter 6. Computations of Orbit Categories and Smash Products		147
6.1.	Computation of orbit categories	147
6.2.	Computation of smash products	153
6.3.	Computation of right smash products	160
Chapter 7. Relationships between module categories		163
7.1.	Tensor products over a small category and left Kan extensions	163
7.2.	Tensor product functor by a bimodule	169
7.3.	Hom functor by a bimodule and its left adjoint	170
7.4.	The pullup functor and the pushdown functor	172
7.5.	The module category of the orbit category and the category of invariant modules	180
7.6.	The module category and the category of graded modules of the orbit category	180
Chapter 8. 2-categorical covering theory under colax actions of a category		187
8.1.	Grothendieck constructions	187
8.2.	Pseudo-actions induced on module categories	188
8.3.	Subsequent progress	192
Appendix A. Set theory for the foundation of category theory		193
A.1.	Universes	193
A.2.	Hierarchy of sets	196
A.3.	Hierarchy of categories, k -moderate categories	199
A.4.	Hierarchy of 2-categories	200
A.5.	Application 1: The category of colax functors and the derived category	202
A.6.	Application 2: Tensor products over a light category	204
Appendix B. Supplement to the original version		211
B.1.	The category of algebras and the category of finite linear categories: an answer to Exercise 2.3.9	211
B.2.	Answers to some Exercises in Section 2.3	217
B.3.	Proof of the Krull–Schmidt Theorem	224
B.4.	Proofs of Morita’s Theorem	226
B.5.	Left Kan extensions and tensor products	230
Bibliography		233
Index		237
