Preface	xi
Part 1. Introductory remarks	1
Chapter 1. Constituents of the univariate antenna problem	3
1.1. Problem induced regularization	4
1.2. Problem induced sampling	11
1.3. Recovery as common thread	14
1.4. Organization of the work	15
Part 2. Regularization tools	17
Chapter 2. Functional and Fourier analytic auxiliaries	19
2.1. Functional analytic tools	19
2.2. Fourier asymptotics and limit relations	39
Part 3. Regularization methodologies	47
Chapter 3. Matricial methodologies of resolution	49
3.1. Least squares method and pseudoinverse	49
3.2. Singular value decomposition	51
3.3. Regularization methods	53
Chapter 4. Compact operator methodologies of resolution	57
4.1. Least squares method and pseudoinverse	57
4.2. Singular value decomposition	59
4.3. Regularization methods	61
4.4. Approximation and data error	64
Chapter 5. Example realizations light: univariate differentiation	67
5.1. Regularization by change of space and/or topology	67
5.2. Singular value decomposition	71
5.3. Tikhonov regularization	73
5.4. Multiscale regularization	74
5.5. Finite difference schemes	75
5.6. Fredholm integral equation with strong noise	77
5.7. Fredholm integral equation with weak noise	79
Chapter 6. Reconstruction and regularization methods	81
6.1. Concept of regularization revisited	81
6.2. Use of a priori bounds	84

6.3.	Tikhonov regularization	85
6.4.	Characterization of regularizers	87
6.5.	Reconstruction optimality	94
6.6.	Order optimality of regularizing filters	98
6.7.	Pseudoinverses in reproducing kernel Hilbert spaces	108
6.8.	Iterative methods as regularization schemes	115
6.9.	Projection methods	124
6.10.	Multiscale spectral regularization	134
6.11.	Multiscale space mollifier schemes	142
6.12.	Backus-Gilbert method	147
6.13.	Stochastic regularization methods	148
6.14.	Nonlinear ill-posed problems	150
6.15.	Methodologies and dilemmas	160
Part 4.	Regularization examples	165
Chapter 7.	Regularization methodologies in geotechnology	167
7.1.	Potential theoretic auxiliaries	167
7.2.	Relevant inverse potential problems	188
7.3.	Satellite gravitational gradiometry (SGG)	194
7.4.	Inverse gravimetry (IG)	218
7.5.	Inverse magnetometry (IM)	244
Part 5.	Sampling tools	253
Chapter 8.	Lattice point and special function theoretic auxiliaries	255
8.1.	Geometric number theory	255
8.2.	Periodization and Poisson summation formula	262
8.3.	Metaharmonic theory and Bessel function asymptotics	265
Part 6.	Sampling methodologies	277
Chapter 9.	Sampling over continuously connected pointsets	279
9.1.	Univariate Fourier theory based Shannon sampling	279
9.2.	Reproducing kernel induced sampling concepts	284
9.3.	Sampling sets in reproducing kernel spaces	297
9.4.	Sampling induced reproducing kernel space framework	299
9.5.	Sampling in shift-invariant spaces	302
Chapter 10.	Sampling over discretely given pointsets	307
10.1.	Dirac mass	308
10.2.	Infinite networks and relative Hilbert spaces	310
10.3.	Point masses of finite reproducing kernel Hilbert space norm	312
10.4.	Infinite square matrices	315
10.5.	Point masses and concrete models	316
10.6.	Point mass samples and interpolation	324
Chapter 11.	Polyharmonic finite bandwidth sampling	327
11.1.	Multivariate integral formulas to boundary conditions	328
11.2.	Sampling to Dirichlet conditions	330

11.3. Finite bandwidth splines	332
Chapter 12. Polyharmonic infinite bandwidth sampling	335
12.1. Integral formulas over Euclidean spaces	335
12.2. Asymptotically defined reproducing kernel Hilbert space	336
12.3. Thin plate spline concept	337
12.4. Cardinal spline concept	339
12.5. Relationship to the multivariate Shannon kernel	341
Chapter 13. Polymetaharmonic finite bandwidth sampling	343
13.1. Univariate lattice point theory based Shannon sampling	343
13.2. Multivariate lattice functions and summation formulas	361
13.3. Bivariate lattice point identities and Shannon-type sampling	368
13.4. Multivariate Gauss-Weierstrass integral transform	377
13.5. Multivariate Gauss-Weierstrass summability Shannon sampling	383
13.6. Multivariate Shannon-type nonsummability sampling	394
13.7. Gauss-Weierstrass wavelet sampling	395
Chapter 14. Polymetaharmonic infinite bandwidth sampling	401
14.1. Univariate lattice point theory based sampling	401
14.2. Multivariate summation and lattice point identities	406
14.3. Multivariate lattice sampling	413
Part 7. Sampling examples	417
Chapter 15. Sampling methodologies in technology	419
15.1. Exponential reproduction inversion in gravimetry	419
15.2. Slepian spline inversion in antenna technology	422
Part 8. Concluding remarks	431
Chapter 16. Recovery as interconnecting whole	433
16.1. Regularization as constituting methodology	433
16.2. Sampling as constituting methodology	435
16.3. Recovery as common thread	440
List of symbols	443
Bibliography	445
Index	483
