

Contents

Preface	vii
Sample Course Outline	ix
1 Introduction to Differential Equations	1
1.1 Basic Terminology	2
1.1.1 Ordinary vs. Partial Differential Equations	2
1.1.2 Independent Variables, Dependent Variables, and Parameters	3
1.1.3 Order of a Differential Equation	3
1.1.4 What is a Solution?	3
1.1.5 Systems of Differential Equations	5
1.2 Families of Solutions, Initial-value Problems	6
1.3 Modeling with Differential Equations	11
2 First-order Differential Equations	19
2.1 Separable First-order Equations	19
2.1.1 Application 1: Population Growth	23
2.1.2 Application 2: Newton’s Law of Cooling	25
2.2 Graphical Methods, the Slope Field	28
2.2.1 Using Graphical Methods to Visualize Solutions	32
2.3 Linear First-order Differential Equations	36
2.3.1 Application: Single-compartment mixing problem	41
2.4 Existence and Uniqueness of Solutions	45
2.5 More Analytic Methods for Nonlinear First-order Equations	50
2.5.1 Exact Differential Equations	50
2.5.2 Bernoulli Equations	54
2.5.3 Using Symmetries of the Slope Field	56
2.6 Numerical Methods	58
2.6.1 Euler’s Method	59
2.6.2 Improved Euler Method	62
2.6.3 Fourth-Order Runge-Kutta Method	64
2.7 Autonomous Equations, the Phase Line	69
2.7.1 Stability — Sinks, Sources, and Nodes	71
2.7.2 Bifurcation in Equations with Parameters	72
	xi

3	Second-order Differential Equations	79
3.1	General Theory of Homogeneous Linear Equations	80
3.2	Homogeneous Linear Equations with Constant Coefficients	86
3.2.1	Second-order Equation with Constant Coefficients	86
3.2.2	Equations of Order Greater Than Two	90
3.3	The Spring-mass Equation	92
3.3.1	Derivation of the Spring-mass Equation	93
3.3.2	The Unforced Spring-mass System	94
3.4	Nonhomogeneous Linear Equations	100
3.4.1	Method of Undetermined Coefficients	100
3.4.2	Variation of Parameters	107
3.5	The Forced Spring-mass System	112
3.6	Linear Second-order Equations with Non-constant Coefficients	123
3.6.1	The Cauchy-Euler Equation	124
3.6.2	Series Solutions	126
3.7	Autonomous Second-order Differential Equations	132
3.7.1	Numerical Methods	133
3.7.2	Autonomous Equations and the Phase Plane	134
4	Linear Systems of First-order Differential Equations	141
4.1	Introduction to Systems	141
4.1.1	Writing Differential Equations as a First-order System	142
4.1.2	Linear Systems	143
4.2	Matrix Algebra	146
4.3	Eigenvalues and Eigenvectors	153
4.4	Analytic Solutions of the Linear System $\vec{x}' = A\vec{x}$	161
4.4.1	Application 1: Mixing Problem with Two Compartments	165
4.4.2	Application 2: Double Spring-mass System	167
4.5	Large Linear Systems; the Matrix Exponential	172
4.5.1	Definition and Properties of the Matrix Exponential	173
4.5.2	Using the Matrix Exponential to Solve a Nonhomogeneous System	175
4.5.3	Application: Mixing Problem with Three Compartments	177
5	Geometry of Autonomous Systems	179
5.1	The Phase Plane for Autonomous Systems	180
5.2	Geometric Behavior of Linear Autonomous Systems	183
5.2.1	Linear Systems with Real (Distinct, Nonzero) Eigenvalues	183
5.2.2	Linear Systems with Complex Eigenvalues	186
5.2.3	The Trace-determinant Plane	187
5.2.4	The Special Cases	189
5.3	Geometric Behavior of Nonlinear Autonomous Systems	193
5.3.1	Finding the Equilibrium Points	195
5.3.2	Determining the Type of an Equilibrium	196
5.3.3	A Limit Cycle the Van der Pol equation	200
5.4	Bifurcations for Systems	203

5.4.1	Bifurcation in a Spring-mass Model	203
5.4.2	Bifurcation of a Predator-prey Model	205
5.4.3	Bifurcation Analysis Applied to a Competing Species Model	207
5.5	Student Projects	210
5.5.1	The Wilson-Cowan Equations	211
5.5.2	A New Predator-prey Equation — putting it all together	214
6	Laplace Transforms	217
6.1	Definition and Some Simple Laplace Transforms	217
6.1.1	Four Simple Laplace Transforms	219
6.1.2	Linearity of the Laplace Transform	220
6.1.3	Transforming the Derivative of $f(t)$	221
6.2	Solving Equations, the Inverse Laplace Transform	222
6.2.1	Partial Fraction Expansions	224
6.3	Extending the Table	228
6.3.1	Inverting a Term with an Irreducible Quadratic Denominator	229
6.3.2	Solving Linear Systems with Laplace Transforms	232
6.4	The Unit Step Function	236
6.5	Convolution and the Impulse Function	248
6.5.1	The Convolution Integral	248
6.5.2	The Impulse Function	250
6.5.3	Impulse Response of a Linear, Time-invariant System	253
A	Answers to Odd-numbered Exercises	257
B	Derivative and Integral Formulas	297
C	Cofactor Method for Determinants	299
D	Cramer’s Rule for Solving Systems of Linear Equations	301
E	The Wronskian	303
F	Table Of Laplace Transforms	305
	Index	307
	About the Author	315
