Introduction	xi
1 First-Order Equations	1
1.1 Integration by Guess-and-Check	1
1.2 First-Order Linear Equations	3
1.2.1 The Integrating Factor	4
1.3 Separable Equations	8
1.3.1 Problems	10
1.4 Some Special Equations	17
1.4.1 Homogeneous Equations	17
1.4.2 The Logistic Population Model	19
1.4.3 Bernoulli's Equations	21
1.4.4* Riccati's Equations	22
1.4.5* Parametric Integration	23
1.4.6 Some Applications	24
1.5 Exact Equations	26
1.6 Existence and Uniqueness of Solution	30
1.7 Numerical Solution by Euler's Method	30
1.7.1 Problems	32
1.8* The Existence and Uniqueness Theorem	40
1.8.1 Problems	45
2 Second-Order Equations	49
2.1 Special Second-Order Equations	49
2.1.1 y Is Not Present in the Equation	50
2.1.2 x Is Not Present in the Equation	51
2.1.3* The Trajectory of Pursuit	53
2.2 Linear Homogeneous Equations with Constant Coefficients	54
2.2.1 The Characteristic Equation Has Two Distinct Real Roots	55
2.2.2 The Characteristic Equation Has Only One (Repeated) Real Root	57
2.3 The Characteristic Equation Has Two Complex Conjugate Roots	58
2.3.1 Euler's Formula	58
2.3.2 The General Solution	58
2.3.3 Problems	60
2.4 Linear Second-Order Equations with Variable Coefficients	64
2.5 Some Applications of the Theory	67
2.5.1 The Hyperbolic Sine and Cosine Functions	67

2.5.2	Different Ways to Write the General Solution	68
2.5.3	Finding the Second Solution	69
2.5.4	Problems	70
2.6	Nonhomogeneous Equations	72
2.7	More on Guessing of $Y(t)$	75
2.8	The Method of Variation of Parameters	77
2.9	The Convolution Integral	79
2.9.1	Differentiation of Integrals	79
2.9.2	Yet Another Way to Compute a Particular Solution	80
2.10	Applications of Second-Order Equations	81
2.10.1	Vibrating Spring	81
2.10.2	Problems	83
2.10.3	A Meteor Approaching the Earth	90
2.10.4	Damped Oscillations	91
2.11	Further Applications	92
2.11.1	Forced and Damped Oscillations	92
2.11.2	An Example of a Discontinuous Forcing Term	93
2.11.3	Oscillations of a Pendulum	94
2.11.4	Sympathetic Oscillations	95
2.12	Oscillations of a Spring Subject to a Periodic Force	97
2.12.1	The Fourier Series	97
2.12.2	Vibrations of a Spring Subject to a Periodic Force	101
2.13	Euler's Equation	101
2.14	Linear Equations of Order Higher Than Two	105
2.14.1	The Polar Form of Complex Numbers	105
2.14.2	Linear Homogeneous Equations	106
2.14.3	Nonhomogeneous Equations	108
2.14.4	Problems	108
2.15	Oscillation and Comparison Theorems	117
3	Using Infinite Series to Solve Differential Equations	125
3.1	Series Solution Near a Regular Point	125
3.1.1	Maclaren and Taylor Series	125
3.1.2	A Toy Problem	127
3.1.3	Using Series When Other Methods Fail	128
3.2	Solution Near a Mildly Singular Point	133
3.2.1*	Derivation of $J_0(x)$ by Differentiation of the Equation	137
3.3	Moderately Singular Equations	138
3.3.1	Problems	142
4	The Laplace Transform	149
4.1	The Laplace Transform and Its Inverse	149
4.1.1	Review of Improper Integrals	149
4.1.2	The Laplace Transform	150
4.1.3	The Inverse Laplace Transform	151
4.2	Solving the Initial Value Problems	153
4.2.1	Step Functions	155
4.3	The Delta Function and Impulse Forces	158

4.4	Convolution and the Tautochrone Curve	161
4.4.1	The Tautochrone curve	163
4.5	Distributions	165
4.5.1	Problems	167
5	Linear Systems of Differential Equations	177
5.1	The Case of Real Eigenvalues	177
5.1.1	Review of Vectors and Matrices	177
5.1.2	Linear First-Order Systems with Constant Coefficients	179
5.2	A Pair of Complex Conjugate Eigenvalues	183
5.2.1	Complex-Valued and Real-Valued Solutions	183
5.2.2	The General Solution	183
5.2.3	Nonhomogeneous Systems	185
5.3	The Exponential of a Matrix	185
5.3.1	Problems	189
5.4	Floquet Theory and Massera's Theorem	197
5.5	Solutions of Planar Systems Near the Origin	203
5.5.1	Linearization and the Hartman-Grobman Theorem	206
5.5.2	Phase Plane and the Prüfer Transformation	208
5.5.3	Problems	209
5.6	Controllability and Observability	214
5.6.1	The Cayley-Hamilton Theorem	214
5.6.2	Controllability of Linear Systems	215
5.6.3	Observability	217
5.6.4	Problems	219
6	Nonlinear Systems	221
6.1	The Predator-Prey Interaction	221
6.2	Competing Species	225
6.3	An Application to Epidemiology	230
6.4	Lyapunov's Stability	231
6.4.1	Stable Systems	235
6.5	Limit Cycles	237
6.5.1	Poincaré-Bendixson Theorem	238
6.5.2	Dulac-Bendixson Criterion	241
6.6	Periodic Population Models	242
6.6.1	Problems	249
7	The Fourier Series and Boundary Value Problems	259
7.1	The Fourier Series for Functions of an Arbitrary Period	259
7.1.1	Even and Odd Functions	261
7.1.2	Further Examples and the Convergence Theorem	263
7.2	The Fourier Cosine and the Fourier Sine Series	265
7.3	Two-Point Boundary Value Problems	268
7.3.1	Problems	269
7.4	The Heat Equation and the Method of Separation of Variables	273
7.5	Laplace's Equation	279

7.6	The Wave Equation	283
7.6.1	Nonhomogeneous Problems	286
7.6.2	Problems	288
7.7	Calculating Earth's Temperature and Queen Dido's Problem	293
7.7.1	The Complex Form of the Fourier Series	293
7.7.2	The Temperatures Inside the Earth and Wine Cellars	294
7.7.3	The Isoperimetric Inequality	296
7.8	Laplace's Equation on Circular Domains	297
7.9	Sturm-Liouville Problems	301
7.9.1	The Fourier-Bessel Series	305
7.9.2	Cooling of a Cylindrical Tank	306
7.9.3	Cooling of a Rectangular Bar	307
7.10	Green's Function	308
7.10.1	Problems	311
7.11	The Fourier Transform	317
7.12	Problems on Infinite Domains	319
7.12.1	Evaluation of Some Integrals	319
7.12.2	The Heat Equation for $-\infty < x < \infty$	319
7.12.3	Steady-State Temperatures for the Upper Half-Plane	321
7.12.4	Using the Laplace Transform for a Semi-Infinite String	322
7.12.5	Problems	322
8	Elementary Theory of PDE	325
8.1	Wave Equation: Vibrations of an Infinite String	325
8.2	Semi-Infinite String: Reflection of Waves	330
8.3	Bounded String: Multiple Reflections	334
8.4	Neumann Boundary Conditions	336
8.5	Nonhomogeneous Wave Equation	339
8.5.1	Problems	342
8.6	First-Order Linear Equations	346
8.6.1	Problems	351
8.7	Laplace's Equation: Poisson's Integral Formula	352
8.8	Some Properties of Harmonic Functions	354
8.9	The Maximum Principle	357
8.10	The Maximum Principle for the Heat Equation	359
8.10.1	Uniqueness on an Infinite Interval	361
8.11	Dirichlet's Principle	363
8.12	Classification Theory for Two Variables	365
8.12.1	Problems	369
9	Numerical Computations	377
9.1	The Capabilities of Software Systems, Like <i>Mathematica</i>	377
9.2	Solving Boundary Value Problems	380
9.3	Solving Nonlinear Boundary Value Problems	382
9.4	Direction Fields	384

Contents	ix
Appendix	387
A.1 The Chain Rule and Its Descendants	387
A.2 Partial Fractions	388
A.3 Eigenvalues and Eigenvectors	389
A.4 Matrix Functions and the Norm	392
Bibliography	395
Index	397
