<b>Introduction</b>	1
<b>Part I The 17th and 18th centuries</b>	5
<b>1 Introduction: The 17th and 18th centuries</b>	7
<b>2 The Invention of the Calculus</b>	13
Introduction	13
2.1 Tangents, maxima, and minima	14
2.2 Area and volume problems	29
2.3 The situation mid-century	44
2.4 Further reading	50
<b>3 Newton and Leibniz</b>	51
Introduction	51
3.1 Newton	51
3.2 Newton and his calculus	59
3.3 Leibniz and his calculus	67
3.4 Further reading	75
<b>4 The Development of the Calculus</b>	77
Introduction	77
4.1 Inverse tangent problems	78
4.2 Newton's calculus and inverse tangent problems	86
4.3 Newton's mature calculus	97
4.4 Leibniz's mature calculus	105
4.5 A comparison	118
4.6 Further reading	121
<b>5 Newton's <i>Principia Mathematica</i></b>	123
Introduction	123
5.1 The creation of Newton's <i>Principia</i>	124
5.2 The content of the <i>Principia</i>	132
5.3 Responses to the <i>Principia</i>	148
5.4 Newton's final years	151
5.5 Further reading	153

<b>6</b>	<b>The Spread of the Calculus</b>	155
	Introduction	155
6.1	The next generation	155
6.2	The calculus, 1690–1730	158
6.3	The Continental reception of the <i>Principia</i>	172
6.4	Further reading	189
<b>7</b>	<b>The 18th century</b>	191
	Introduction	191
7.1	Euler	192
7.2	D’Alembert and Lagrange	204
7.3	Algebra	207
7.4	Further reading	217
<b>8</b>	<b>18th-century Number Theory and Geometry</b>	219
	Introduction	219
8.1	Number theory	219
8.2	Infinite series	225
8.3	Euler and geometry	229
8.4	The study of curves	232
8.5	Further reading	244
<b>9</b>	<b>Euler, Lagrange, and 18th-century Calculus</b>	247
	Introduction	247
9.1	Early critiques of the calculus	247
9.2	Euler’s calculus	255
9.3	Differential equations	265
9.4	The foundations of the calculus	274
9.5	Further reading	281
<b>10</b>	<b>18th-century Applied Mathematics</b>	283
	Introduction	283
10.1	The vibrating string	286
10.2	Euler’s vision of mechanics	298
10.3	Further reading	307
<b>11</b>	<b>18th-century Celestial Mechanics</b>	309
	Introduction	309
11.1	Testing the <i>Principia</i>	309
11.2	Academy prizes	310
11.3	Laplace	311
11.4	The stability of the solar system	314
11.5	Jupiter and Saturn	322
11.6	Further reading	329
<b>Part II</b>	<b>The 19th Century</b>	331
<b>12</b>	<b>Introduction: The 19th Century</b>	333

<b>13 The Profession of Mathematics</b>	335
Introduction	335
13.1 The social context	335
13.2 Mathematics in France	336
13.3 Mathematics in Germany	350
13.4 Journals and publishing	360
13.5 The later 19th century	368
13.6 Further reading	371
<b>14 Non-Euclidean Geometry</b>	373
Introduction	373
14.1 The first Western attempts	377
14.2 Lobachevskii and Bolyai	390
14.3 The reformulation of metrical geometry	401
14.4 Further reading	412
<b>15 Projective Geometry and the Axiomatisation of Mathematics</b>	413
Introduction	413
15.1 The rediscovery of projective geometry in France	413
15.2 Projective geometry in Germany	426
15.3 The establishment of projective geometry	432
15.4 The re-unification of geometry	434
15.5 The axiomatisation of geometry	442
15.6 Further reading	449
<b>16 The Rigorisation of Analysis</b>	451
Introduction	451
16.1 Bolzano, Cauchy, and continuity	451
16.2 Cauchy's mistake	463
16.3 Cauchy on differentiation and integration	469
16.4 Conclusion	472
16.5 Further reading	473
<b>17 The Foundations of Mathematics</b>	475
Introduction	475
17.1 Dedekind's definition of the real numbers	475
17.2 Cantor, sets, and the infinite	481
17.3 Foundational questions	490
17.4 The philosophy of mathematics	494
17.5 Set theory and logic	502
17.6 Further reading	508
<b>18 Algebra and Number Theory</b>	511
Introduction	511
18.1 Number theory	511
18.2 Prime numbers	520
18.3 Complex numbers and quaternions	528
18.4 Vectors	538
18.5 Further reading	543

<b>19 Group Theory</b>	545
Introduction	545
19.1 Solving polynomial equations	545
19.2 Galois and Galois theory	552
19.3 Impossibility theorems	560
19.4 Galois's theory of groups and equations	563
19.5 Group theory	565
19.6 Further reading	566
<b>20 Applied Mathematics</b>	569
Introduction	569
20.1 The uses of Fourier series	570
20.2 Potential theory	581
20.3 Transatlantic cables	590
20.4 Further reading	593
<b>21 Poincaré and Celestial Mechanics</b>	595
Introduction	595
21.1 Late 19th-century celestial mechanics	595
21.2 Henri Poincaré	599
21.3 Poincaré and differential equations	601
21.4 Poincaré and celestial mechanics	603
21.5 Poincaré's memoir	610
21.6 Poincaré's later work in celestial mechanics	619
21.7 Conclusion	621
21.8 Further reading	622
<b>22 Coda</b>	623
Introduction	623
22.1 The international community of mathematicians	623
22.2 Further reading	633
<b>23 Exercises</b>	635
Advice on tackling the exercises	635
Exercises: Part A	641
Exercises: Part B	657
Exercises: Part C	660
<b>Bibliography</b>	663
<b>Index</b>	683
