To the student	xvii
Part 1 Group theory	1
1 Introduction	3
1.1 A brief backstory	3
1.2 Properties of the integers	4
2 Binary operations	7
2.1 Closure	7
2.2 Binary tables	10
2.3 Isomorphic structures	11
3 Groups	15
3.1 Basic properties of groups	15
3.2 Group notation	18
3.3 Group tables and the order of a group	20
4 Subgroups and generating sets	23
4.1 Subgroups	23
4.2 The center of a group	26
4.3 Generating sets	27
5 Applications of subgroups	31
5.1 Cosets	31
5.2 Lagrange's theorem	33
5.3 Conjugation	34
Part 2 Types of groups	37
6 Quotient groups	39
6.1 Homomorphisms and kernel	39
6.2 Normal subgroups	41
6.3 The natural projection homomorphism	44

7 Cyclic groups	47
7.1 Properties of cyclic groups	47
7.2 Infinite cyclic groups	48
7.3 Finite cyclic groups	49
8 Direct products	53
8.1 External direct products	53
8.2 Finitely generated abelian groups	55
9 The isomorphism theorems	59
9.1 The first isomorphism theorem	59
9.2 Quotients of finitely generated abelian groups	60
9.3 The second and third isomorphism theorems	62
10 The symmetric groups	65
10.1 Permutations	65
10.2 Dihedral groups	66
10.3 Cayley's theorem	68
11 Alternating groups	71
11.1 Orbits and cycles	71
11.2 Transpositions and the parity of a permutation	73
11.3 The alternating group	74
11.4 Generating sets for symmetric groups	75
11.5 The simplicity of A_5	78
Part 3 Ring theory	81
12 Rings	83
12.1 Basic properties of rings	83
12.2 Homomorphisms	87
12.3 Polynomials	89
13 Commutative rings	93
13.1 Integral domains	93
13.2 The Ring \mathbb{Z}_n	95
13.3 Polynomials over integral domains	96
14 Fields	99
14.1 The field of quotients	99
14.2 The characteristic of a ring	101
14.3 Polynomials over a field	102
15 Quotient rings	105
15.1 Ideals	105
15.2 Ideals in commutative rings	106
15.3 Ideals in polynomial rings	108

Contents	ix
Part 4 Linear algebra	111
16 Vector spaces	113
16.1 Basic properties of vector spaces	113
16.2 Linear combinations and span	116
16.3 Linear independence and bases	117
16.4 The dimension of a vector space	119
17 Linear transformations	123
17.1 Bases and linear transformations	123
17.2 Rank and nullity	125
17.3 Eigenvectors	126
17.4 Linear operators	127
17.5 Dual spaces	129
Part 5 Field theory	133
18 Extension fields	135
18.1 Degree of an extension	135
18.2 Simple extensions	136
18.3 Splitting fields	139
19 Algebraic extensions	141
19.1 Algebraic elements	141
19.2 Number fields	143
19.3 Finite fields	144
Part 6 Intermediate group theory	149
20 Group actions	151
20.1 Definitions and examples	151
20.2 Orbits and stabilizers	154
20.3 Counting orbits	156
21 The Sylow theorems	161
21.1 The class equation	161
21.2 The normalizer	163
21.3 The Sylow theorems	163
21.4 Applications to simple groups	165
Appendices	169
A Relations and functions	171
A.1 Equivalence relations	171
A.2 Functions	173
A.3 Bijections and inverse functions	175
B Matrices	179
B.1 Matrix algebra	179
B.2 Matrix inverses	182

B.3	Determinants	183
C	Complex numbers	187
C.1	Complex arithmetic	187
C.2	The geometry of complex numbers	189
C.3	Complex solutions of equations	193
	Index	197
