

Contents

Preface	vii
Acknowledgments	ix
1 Introduction	1
1.1 What Is this Book All About?	1
1.2 What Should You Expect?	2
1.3 An Inquiry-Based Approach	3
1.4 Structure of the Textbook	4
1.5 Some Minimal Guidance	5
2 Mathematics and Logic	9
2.1 A Taste of Number Theory	9
2.2 Introduction to Logic	14
2.3 Techniques for Proving Conditional Propositions	20
2.4 Introduction to Quantification	24
2.5 More About Quantification	28
3 Set Theory	37
3.1 Sets	37
3.2 Russell's Paradox	42
3.3 Power Sets	44
3.4 Indexing Sets	45
3.5 Cartesian Products of Sets	49
4 Induction	53
4.1 Introduction to Induction	53
4.2 More on Induction	56
4.3 Complete Induction	59
4.4 The Well-Ordering Principle	61

5 The Real Numbers	63
5.1 Axioms of the Real Numbers	63
5.2 Standard Topology of the Real Line	74
6 Three Famous Theorems	81
6.1 The Fundamental Theorem of Arithmetic	81
6.2 The Irrationality of $\sqrt{2}$	86
6.3 The Infinitude of Primes	88
7 Relations and Partitions	91
7.1 Relations	91
7.2 Equivalence Relations	99
7.3 Partitions	101
7.4 Modular Arithmetic	105
8 Functions	111
8.1 Introduction to Functions	111
8.2 Injective and Surjective Functions	118
8.3 Compositions and Inverse Functions	125
8.4 Images and Preimages of Functions	130
8.5 Continuous Real Functions	133
9 Cardinality	141
9.1 Introduction to Cardinality	141
9.2 Finite Sets	145
9.3 Infinite Sets	147
9.4 Countable Sets	150
9.5 Uncountable Sets	153
A Elements of Style for Proofs	157
B Fancy Mathematical Terms	163
C Paradoxes	165
D Definitions in Mathematics	167
